

### What Is Measuring Up?

*easuring Up* is a series of biennial report cards that provide the general public and policymakers with information to assess and improve higher education in each state. The report cards evaluate states because they are primarily responsible for educational access and quality in the United States. This year's edition, *Measuring Up 2008,* is the fifth in the series, which began in 2000. In *Measuring Up,* "higher education" refers to all education and training beyond high school, including public and private, two- and four-year, and for-profit and nonprofit institutions.

The report card grades states in six overall performance categories:

**Preparation:** How adequately does the state prepare students for education and training beyond high school?

**Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school?

**Affordability:** How affordable is higher education for students and their families?

**Completion:** Do students make progress toward and complete their certificates or degrees in a timely manner?

**Benefits:** What benefits does the state receive from having a highly educated population?

**Learning:** What is known about student learning as a result of education and training beyond high school?

Each state receives a letter grade in each performance category. Each grade is based on the state's performance on several indicators, or quantitative measures, in that category.

In four of the performance categories - Preparation, Participation, Completion, and Benefits grades are calculated by comparing each state's current performance with that of the best-performing states. This comparison provides a benchmark for evaluating each state's performance within a national context and encourages each state to "measure up" to the highest-performing states. The Affordability category is the exception. In this category, the state's current performance is compared with the performance of the best states in the late 1990s, since current performance reflects a trend to "measure down" rather than "measure up." All but one state receive an "F" in Affordability. The failing grades in this category confirm the fast decline in affordable higher education for American families. Despite state and federal increases in student financial aid, the overall portion of income that most families must devote for higher education continues to escalate.

In *Measuring Up 2008*, state performance in higher education is assessed in three ways:

**Graded Information:** Each state's current performance is compared with that of the best-performing states, and the results are indicated by letter grades.

**Change Over Time:** Change Over Time indicators compare each state's current performance with its own previous performance in the 1990s. For each category, the state's change is determined by its improvement or decline in performance on a key indicator in that category. This information is displayed in two ways. First, states receive either an "up" or a "down" arrow in each performance area (see page 3). An "up" arrow indicates that the state has increased or remained stable on the key indicator in the category, a "down" arrow indicates that the state the state has declined on the key indicator in the category. Secondly, information about Change Over Time is presented graphically in greater detail on the fourth page of this report card.

**International Comparisons:** As in 2006, this year's edition of *Measuring Up* offers international comparisons that reveal how well the United States and each of the 50 states are preparing residents with the knowledge and skills necessary to compete in a global economy. State performance is compared with the performance of nations that are associated with the Organisation for Economic Co-operation and Development (OECD).

In *Measuring Up 2008*, all states receive an "Incomplete" in Learning because there are not sufficient data to allow meaningful state-by-state comparisons. *Measuring Up 2006* provided statespecific information on Learning for nine states, but in 2008 no state collects and provides the information necessary to determine the state's "educational capital" — or the level of knowledge and skills possessed by its residents.

#### A Snapshot of Grades and Change Over Time

#### **Preparation:**

**Grades:** 6 states received an A, 18 states received a B, 21 states received a C, 5 states received a D, and no state received an F.

**Change Over Time:**\* 34 states have improved or remained stable on the key indicator and 16 states have declined on the key indicator.

#### **Participation:**

**Grades:** 2 states received an A, 8 states received a B, 22 states received a C, 15 states received a D, and 3 states received an F.

Change Over Time:\* 43 states have improved or remained stable on the key indicator and 7 states have declined on the key indicator.

#### **Affordability:**

**Grades:** 1 state received a C and 49 states received an F.

**Change Over Time:**\* 2 states have improved or remained stable on the key indicator and 48 states have declined on the key indicator.

#### **Completion:**

**Grades:** 11 states received an A, 20 states received a B, 16 states received a C, 1 state received a D, and 2 states received an F.

Change Over Time:\* 48 states have improved or remained stable on the key indicator and 2 states have declined on the key indicator.

#### **Benefits:**

**Grades:** 5 states received an A, 15 states received a B, 19 states received a C, 10 states received a D, and 1 state received an F.

**Change Over Time:**\* 50 states have improved or remained stable on the key indicator.

\* For the key indicators for Change Over Time, please see the five indicators with asterisks on page 4.

# Wyoming

### PREPARATION

Wyoming's fairly low performance in educating its young population could limit the state's access to a competitive workforce and weaken its economy.

- Eighth graders perform well in math, science, and reading, but their scores in writing are only fair.
- There is a 10% gap between whites and all minorities in the percentage of 18- to 24-year-olds with a high school credential.

### PARTICIPATION

Change Over Time

College opportunities for Wyoming residents are only fair.

The likelihood of enrolling in college by age 19 is fair, and a low percentage of working-age adults are enrolled in higher education.

### AFFORDABILITY

Change Over Time

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 26% of their income, even after aid, to pay for costs at two-year colleges. However, Wyoming is among the top-performing states in the share of income needed to pay for public two- and four-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only one cent.

### COMPLETION

Change Over Time

# Wyoming performs very well—and has improved—in awarding certificates and degrees.

- Fifty-seven percent of college students complete a bachelor's degree within six years.
- However, 49% of Hispanics graduate within six years, compared with 58% of whites. .

| REPORT CARD            |    |  |  |  |  |  |  |
|------------------------|----|--|--|--|--|--|--|
| Preparation            | С  |  |  |  |  |  |  |
| <b>Participation</b>   | С  |  |  |  |  |  |  |
| Affordability          | F  |  |  |  |  |  |  |
| Completion             | Α  |  |  |  |  |  |  |
| Benefi <mark>ts</mark> | D- |  |  |  |  |  |  |
| Learning               |    |  |  |  |  |  |  |
|                        |    |  |  |  |  |  |  |

### **BENEFITS**

Change Over Time

A small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.

- Eight percent of Hispanics have a bachelor's degree, compared with 24% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about \$300 million higher.

### LEARNING

Like all states, Wyoming receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

### WHAT DO THE ARROWS MEAN?

State has increased or remained stable on the key indicator in the category.

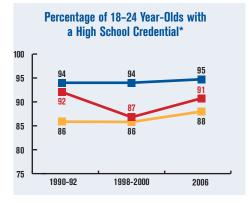

State has declined on the key indicator in the category.

# This page reflects Wyoming's performance and progress since the early 1990s on several key indicators.

### PREPARATION

The percentage of young adults in Wyoming who earn a high school diploma has decreased slightly since the early 1990s. High school completion is above the U.S. average but below the topperforming states.

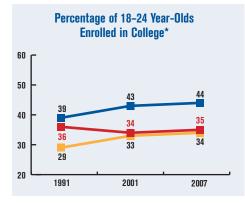

### AFFORDABILITY

The share of family income, after financial aid, needed to pay for college has remained relatively stable at two-year colleges but has risen at four-year institutions. Wyoming is among the bestperforming states in the share of income needed to pay for public two- and four-year colleges.

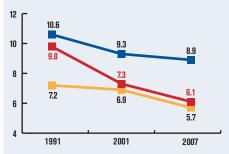

College enrollment of young adults in Wyoming has declined slightly since the early 1990s. The state is slightly above the national average but below the top states in the percentage of young adults enrolled.

### COMPLETION

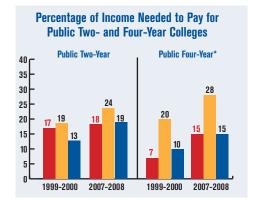

The number of undergraduate credentials and degrees awarded in Wyoming, relative to the number of students enrolled, has increased since the early 1990s. Wyoming surpasses the U.S. average and performs near the top states on this measure. The enrollment of working-age adults, relative to the number of residents without a bachelor's degree, has declined in Wyoming—as it has nationally and in the best-performing states. The percentage attending college in Wyoming is higher than the U.S. average but below the top states.

Percentage of 25-49 Year-Olds Without a Bachelor's Degree Enrolled in College

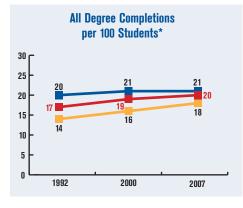

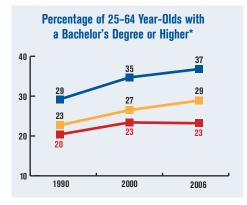

### BENEFITS

The percentage of residents who have a bachelor's degree has increased slightly in Wyoming, but is still well below the U.S. average and the top states.

\*Key indicator for the category.

LEGEND: — & = Wyoming & = United States & = Median of Top Five States

# PREPARATION

# Wyoming 2008

Wyoming's fairly low performance in educating its young population could limit the state's access to a competitive workforce and weaken its economy.

### **Graded Information**

#### Compared with other states:

- Ninety-one percent of young adults in Wyoming earn a high school diploma or General Education Development (GED) diploma by age 24.
- Only a fair proportion (47%) of high school students in Wyoming are enrolled in upper-level math, and a very small proportion (25%) are enrolled in upperlevel science.
- A very small proportion (26%) of 8th graders take algebra.
- Eighth graders perform well on national assessments in math and reading. They perform very well on national assessments in science, indicating that they are well prepared to succeed in challenging high school courses. However, their performance in writing is only fair.
- Low-income 8th graders perform very well on national assessments in math.
- Large proportions of 11th and 12th graders score well on college entrance exams, but very small proportions score well on Advanced Placement tests.
- Seventy percent of secondary school students are taught by qualified teachers, which compares well with topperforming states.

| PREPARATION  | Wyomi        | Тор  |        |
|--|--------------|------|--------|
| PREPARATION  | Early 1990s* | 2008 | States |
| High School Completion (25%)   |              |      |        |
| 18- to 24-year-olds with a high school credential  | 92%          | 91%  | 95%    |

| 8th graders scoring at or above "proficient" on the national assessment exam in reading                                  | 29%          | 33%  | 39%    |
| 8th graders scoring at or above "proficient" on the national assessment exam in science                                  | 34%          | 37%  | 41%    |
| 8th graders scoring at or above "proficient" on the national assessment exam in writing                                  | 23%          | 34%  | 46%    |
| Low-income 8th graders scoring at or above "proficient" on<br>the national assessment exam in math                       | 11%          | 23%  | 24%    |
| Number of scores in the top 20% nationally on SAT/ACT college entrance exam per 1,000 high school graduates              | 140          | 227  | 265    |
| Number of scores that are 3 or higher on an Advanced<br>Placement subject test per 1,000 high school juniors and seniors | 26           | 60   | 237    |
| Teacher Quality (10%)  |              |      |        |
| 7th to 12th graders taught by teachers with a major in their subject   | n/a          | 70%  | 83%    |

\*The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2008*.

#### **Performance Gaps**

There is a 10% gap between whites and all minorities in the percentage of 18- to 24-year-olds with a high school credential.

### **Other Key Facts**

- Among working-age adults (ages 25 to 49) without a high school diploma, only 16 out of 1,000 earned a GED.
- About 11% of children under age 18 live in poverty, compared with a national rate of 18%.

The preparation category measures how well a state's K-12 schools prepare students for education and training beyond high school. The opportunities that residents have to enroll in and benefit from higher education depend heavily on the performance of their state's K-12 educational system.

# PARTICIPATION

College opportunities for Wyoming residents are only fair.

### **Graded Information**

Compared with other states:

- The chance of Wyoming high school students enrolling in college by age 19 is only fair, primarily because few graduates go on to college immediately after high school.
- A fairly low percentage of working-age adults (ages 25 to 49) are enrolled in college-level education or training.

### Change in Graded Measures

#### Since the early 1990s:

The percentage of working-age adults (ages 25 to 49) who are enrolled in education or training beyond high school has declined by 37%, compared with a national decline of 22%.

| PARTICIPATION   | Wyomi        | Wyoming |        |  |
|---|--------------|---------|--------|--|
| PANIIOIPATION   | Early 1990s* | 2008    | States |  |
| Young Adults (67%)  |              |         |        |  |
| Chance for college by age 19  | 39%          | 43%     | 57%    |  |
| 18- to 24-year-olds enrolled in college   | 36%          | 35%     | 44%    |  |
| Working-Age Adults (33%)  |              |         |        |  |
| 25- to 49-year-olds enrolled in any type of postsecondary education with no bachelor's degree or higher | 9.8%         | 6.1%    | 8.9%   |  |

\*The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2008*.

### **Other Key Facts**

- Wyoming's population is projected to grow by 4% from 2005 to 2025, below the national increase of 18%. During approximately the same period, the number of high school graduates is expected to decrease by 2%.
- About 10% of the adult population has less than a high school diploma or its equivalent, compared with 16% nationwide.
- In Wyoming, 1,736 more students are entering the state than leaving to attend college. About 25% of Wyoming high school graduates who go to college attend college out of state.

The participation category addresses the opportunities for state residents to enroll in higher education. A strong grade in participation generally indicates that state residents have high individual expectations for education and that the state provides enough spaces and types of educational programs for its residents.

### AFFORDABILITY

Higher education has become less affordable for students and their families.

### **Graded Information**

- Compared with top-performing states, families in Wyoming devote a fairly large share of family income, even after financial aid, to attend public two-year colleges, and they devote a large share of family income to attend public fouryear colleges and universities. However, Wyoming is one of the top-performing states on these measures. These two sectors enroll 95% of Wyoming's college students.
- The state's investment in needbased financial aid is very low when compared with topperforming states, and Wyoming does not offer low-priced college opportunities.
- Undergraduate students borrowed on average \$4,181 in 2007, one of the lowest averages in the nation.

### **Other Key Facts**

In Wyoming, 64% of students are enrolled in community colleges and 31% in public four-year colleges and universities.

|   | Wyom               | Top States      |                      |

| At lowest-priced colleges, the share of income that the<br>poorest families need to pay for tuition         | 8%                 | 16%             | 7%                   |
| Reliance on Loans (10%)   | 1995               | 2008            |                      |
| Average loan amount that undergraduate students borrow each year  | \$2,642            | \$4,181         | \$2,619              |

\*See the Technical Guide for Measuring Up 2008.

Note: In the affordability category, the lower the figures, the better the performance for all indicators except for "State investment in need-based financial aid."

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

# AFFORDABILITY

# Wyoming **2008**

### Financial Burden to Pay for College Varies Widely by Family Income

Those who are striving to reach or stay in the middle class — the 40% of the population with the lowest incomes — earn on average \$20,124.

■ If a student from such a family were to attend a community college in the state, their net cost to attend college would represent about 26% of their income annually.

| Tuition, room, and board: | \$9,175  |
|---------------------------|----------|
| Financial aid received:   | -\$3,993 |
| Net college cost:         | \$5,182  |
| Percent of income:        | 26%      |

■ If the same student were to attend a public four-year college in the state, their net cost to attend college would represent about 18% of their income annually.

| Tuition, room, and board: | \$10,640 |
|---------------------------|----------|
| Financial aid received:   | -\$6,968 |
| Net college cost:         | \$3,672  |
| Percent of income:        | 18%      |

Note: The numbers shown for tuition, room, and board, minus financial aid may not exactly equal net college cost due to rounding.

| A CLOSER LOOK  |                            | Community<br>Colleges   |   | Public 4-Year colleges/universities |   | Private Non-Profit 4-Year colleges/universities |   |

| 20% of the population with the highest income              | \$113,297                  | \$8,362                 | 7   | \$8,609                             | 8   | n/a   | n/a   |
| 40% of the population with the lowest income               | \$20,124                   | \$5,182                 | 26  | \$3,672                             | 18  | n/a   | n/a   |

\*Net college cost equals tuition, room, and board, minus financial aid.

# COMPLETION

# Wyoming 2008

Wyoming performs very well—and has improved in awarding certificates and degrees.

### **Graded Information**

Compared with other states:

- Wyoming is among the topperforming states in the percentage of first-year students in community colleges who return for their second year.
- In addition, at four-year colleges and universities, the percentage of freshmen who return for their sophomore year is very high (74%).
- A high percentage (57%) of firsttime, full-time college students complete a bachelor's degree within six years of entering college.
- Moreover, a very large proportion of students earn certificates and degrees relative to the number enrolled.
- Thirty-nine postsecondary certificates and degrees were awarded for every 1,000 people in the state without a college degree.

| Certificates, degrees, diplomas at all colleges & universities per 1,000 adults with no college degree | 31           | 39   | 44     |

\*The indicators report data beginning in the early 1990s or the closest year for which reliable data are available.

\*\*2008 data may not be comparable with data from previous years. See the Technical Guide for Measuring Up 2008.

#### **Performance Gaps**

There is a 10% gap between whites and all minorities in college graduation rates at four-year institutions. Forty-nine percent of Hispanics, the largest minority population in Wyoming, graduate from a four-year institution within six years, compared with 58% of whites.

#### **Change in Graded Measures**

- Over the past decade, Wyoming has been among the fastest-improving states in the percentage of first-time, full-time college students completing a bachelor's degree within six years of enrolling in college.
- Since the early 1990s, Wyoming has seen an increase in the proportion of college students earning certificates and degrees relative to the number enrolled, primarily in associate's degrees awarded.
- During the same period, Wyoming has also seen an increase in the number of certificates and degrees completed relative to the population with no college degree.

The completion category addresses whether students continue through their educational programs and earn certificates or degrees in a timely manner. Certificates and degrees from one- and two-year programs as well as the bachelor's degree are included.

### BENEFITS

# Wyoming **2008**

A small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.

### **Graded Information**

Compared with other states:

- A small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.
- However, residents contribute substantially to the civic good, as measured by charitable giving, volunteerism, and voting.

### **Performance Gaps**

- There is a 10% gap between whites and minorities in the percentage of 25- to 64-year-olds with a bachelor's degree or higher. Among the same population, 8% of Hispanics, the largest minority population in Wyoming, have a bachelor's degree or higher, compared with 24% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about \$300 million higher.

### Change in Graded Measures

Since the early 1990s, the percentage of residents holding a bachelor's degree has increased by 14%, compared with an increase of 28% for the United States overall.

\*The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2008*.

\*\*State-level estimates on these measures are not currently available except for six states participating in an oversample; NCES intends to release limited 50-state data on this 2003 survey in 2009.

### **Other Key Facts**

- In 2007, Wyoming scored 48 on the New Economy Index, compared with a nationwide score of 62. The New Economy Index, created by the Kauffman Foundation, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.
- Policymakers and state residents do not have access to important information about high-level literacy skills because the state has declined to participate in the national literacy survey.

The benefits category measures the economic and societal benefits that the state receives as a result of having well-educated residents.

# LEARNING

### Wyoming **2008**

Like all states, Wyoming receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

Measuring Up 2004 for the first time provided state-level results in Learning because five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) participated in a groundbreaking effort to pilot comparable measures in this category. The National Forum on College-Level Learning conducted this project, which was funded by the Pew Charitable Trusts.1 These results were also included in Measuring Up 2006, which for the first time reported performance measures based on licensure and graduate admissions examination scores for all 50 states.

The approach used to examine Learning employed a method similar to that of the other five performance categories in *Measuring Up.* Indicators were developed in three categories:

#### 1. Literacy Levels of College-Educated Residents. What are the abilities of the state's collegeeducated population? The answer to this question constitutes the "educational capital" that the state can count on with respect to developing a

twenty-first century workforce and a citizenry equipped to function effectively in civic and democratic processes.

### 2. Graduates Ready for Advanced

**Practice.** To what extent do colleges and universities in the state educate students to be capable of contributing to the workforce? The answer to this question depends a great deal on the extent to which graduates of the state's colleges and universities are ready to enter a licensed profession or participate in graduate study.

**3. Performance of College Graduates.** How effectively can the state's college and university graduates communicate and solve problems? This is the bottom line with respect to performance in learning that can only be determined by common direct assessments of college graduates.

To evaluate state performance on Learning in *Measuring Up 2004*, indicator results within each of these three categories were compiled for the pilot states and compared with a common standard: the national average on each measure. Performance on the resulting group of measures created a "learning profile" for

each state that shows how many percentage points above or below this national level the values of each of the state's indicators fall.

Measuring Up 2008 uses the same method for portraying results in Learning, although the picture is incomplete. Results for Literacy Levels of College-Educated Residents can be calculated only for the six states (Kentucky, Maryland, Massachusetts, Missouri, New York, and Oklahoma) that participated in the State Assessment of Adult Literacy (SAAL)-a state-level version of the National Assessment of Adult Literacy (NAAL) conducted in 2003. Results for Graduates Ready for Advanced Practice, which are based on common licensure and graduate admissions examinations. can be calculated for all 50 states. Results for Performance of College Graduates relied upon specially administered standardized assessments given to representative samples of the state's about-tograduate college students for five states in 2004. These measures were reported in Measuring Up 2004 and Measuring Up 2006, but have not been repeated for 2008.

### **Wyoming Results**

Wyoming essentially matches the national benchmark in workforce development as reflected in professional licensure examinations. Four percent fewer of the state's graduates take such examinations than do graduates on average nationwide, and their pass rates are 5% above the national average. Wyoming also essentially matches the national benchmark in preparing students for graduate study as reflected in graduate admissions examinations. About 7% more of the state's graduates take such examinations than do graduates on average nationwide, although the proportion earning competitive scores is 7% below the national average. Finally, Wyoming is more than 5 percentage points above the national benchmark with respect to pass rates on teacher examinations.

Wyoming did not participate in the SAAL, so no results on literacy are available.

# **International Comparisons**

# Wyoming **2008**

### **How Wyoming Measures Up Internationally**

### **Participation**

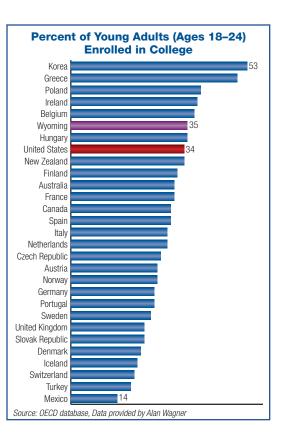

About 35% of young adults, ages 18 to 24, in Wyoming are currently enrolled in college. Internationally, although Wyoming's enrollment rate compares well with that of top countries, it is 18% less than the rate in Korea, the best-performing nation on this measure. Wyoming is also surpassed by Greece, Poland, Ireland, and Belgium.

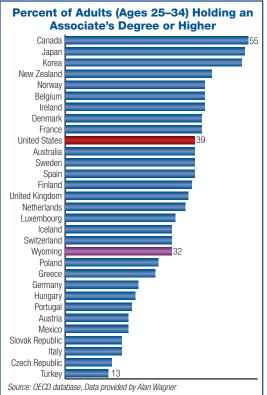

### Completion

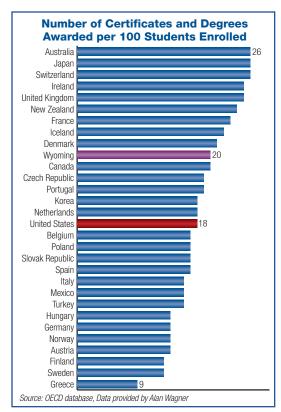

Internationally, Wyoming compares well with top countries in the proportion of students who complete certificates or degrees. Compared with Australia, the topperforming nation on this measure, where 26 out of 100 students enrolled complete a degree or certificate, 20 out of 100 students do so in Wyoming. The state is also behind Japan, Switzerland, Ireland, the United Kingdom, New Zealand, France, Iceland, and Denmark.

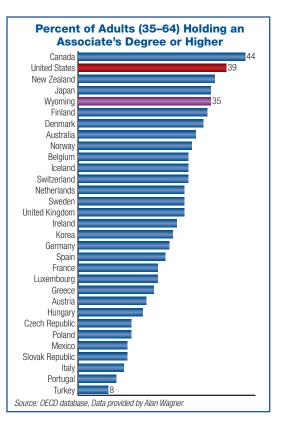

### Educational Level of Adult Population

Wyoming's younger adults, ages 25 to 34, are falling behind older adults, ages 35 to 64, in attaining a college degree. When compared internationally, the proportion of younger adults with a college degree in Wyoming is 23% less than the proportion in Canada, the top-performing nation on this measure. Wyoming is also surpassed by Japan, Korea, New Zealand, Norway, Belgium, Ireland, Denmark, France, Australia, Sweden, Spain, Finland, the United Kingdom, the Netherlands, Luxembourg, Iceland and Switzerland.

| Per capita, FY 2008  | \$537         |           |
| % change, FY 1998-2008   |               | 108%      |

\*The New Economy Index, created by the Kauffman Foundation, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.

### **Questions and Answers about Measuring Up 2008**

#### $igodoldsymbol{Q}$ . Who is being graded in this report card, and why?

Measuring Up 2008 grades states, not students or individual colleges or universities, on their performance in higher education. The states are responsible for preparing students for higher education by means of sound K-12 school systems, and they provide most of the public financial support - approximately \$77 billion in 2008 - for colleges and universities. Through their oversight of public institutions of higher education, state leaders affect the types and number of education programs available in the state. State leaders also determine the limits of financial support and often influence tuition and fees for public colleges and universities. They also establish how much statebased financial aid is available to students and their families, which affects students attending both private and public colleges and universities. In addition, state economic development policies influence the income advantage that residents receive from having some college experience or a college degree.

### . How are states graded?

A. States receive letter grades in each performance category. Each category consists of several indicators, or quantitative measures — a total of 36 indicators in the five graded categories. Grades are calculated based on each state's current performance on these indicators, relative to the best-performing states. Grades in *Measuring Up 2008* reflect state performance for 2006 or 2007, the most recent information available.

For the sixth category, Learning, states receive an "Incomplete" because there is not sufficient information about student learning for meaningful state-by-state comparisons.

### What sources of information are used to determine the grades?

All data used to grade states in *Measuring Up 2008* were collected from reliable national sources, including the U.S. Census Bureau and the U.S. Department of Education. All data are the most recent public information available for state comparisons. Please see the *Technical Guide for Measuring Up 2008* for more information regarding data sources.

### . How do we measure Change Over Time?

Change Over Time indicators compare each state's current performance with its own previous performance in the 1990s. For each category, the state's change is determined by its improvement or decline in performance on a key indicator in that category. This information is displayed in two ways. First, states receive either an "up" or a "down" arrow in each performance area (see page 3). An "up" arrow indicates that the state has increased or remained stable on the key indicator in the category, a "down" arrow indicates that the state has declined on the key indicator in the category. Secondly, information about Change Over Time is presented graphically in greater detail on the fourth page of this report card.

### What is new in *Measuring Up 2008*?

This year the National Center replaced the data from the Census Bureau's Current Population Survey (CPS) with the American Community Survey (ACS), also administered by the Census Bureau. The ACS has a sample size of three million households (as of 2005), and will eventually replace the long survey form of the decennial census. Because of its large sample size, it is a valuable resource for state data. This new data source affects several indicators in the preparation, participation, completion, and benefits categories. For more information on these indicators, see *Technical Guide for Measuring Up 2008* at www.highereducation.org. In addition, *Measuring Up 2008* includes two new indicators, one in Completion and one in Benefits. These new indicators can be found in the *Technical Guide for Measuring Up 2008*.

### Q. What information is provided but not graded?

The state report cards highlight important gaps in college opportunities for various income and ethnic groups, they identify improvements and setbacks in each state's performance over time, and they compare state performance in higher education with other countries. Each state report card also presents important contextual information, such as demographic trends, student migration data, and state funding levels for higher education.

### Why does *Measuring Up 2008* include international indicators?

As in 2006, this year's edition of Measuring Up provides information on key international indicators of educational performance. In the global economy, it is critical for each nation to establish and maintain a competitive edge through the ongoing, high-quality education of its population. Measuring Up 2008 offers international comparisons that reveal how well the United States and each of the 50 states are preparing residents with the knowledge and skills necessary to compete in a global economy. As with other data in the report card, each international measure is based on the most current data available. In this case, the data are from the Organisation for Economic Co-operation and Development (OECD). International comparisons are used to gauge the states' and the nation's standing relative to OECD countries on the participation and educational success of their populations. Please see the Technical Guide for Measuring Up 2008 for more information regarding data sources.

### State Grades 2008

| State          | Preparation | Participation | Affordability | Completion | Benefits | Learning |
|----------------|-------------|---------------|---------------|------------|----------|----------|

### THE NATIONAL CENTER FOR PUBLIC POLICY AND HIGHER EDUCATION

The *Measuring Up 2008* national and state report cards on higher education were made possible by grants from the Bill and Melinda Gates Foundation and the Lumina Foundation for Education.

The National Center for Public Policy and Higher Education promotes public policies that enhance Americans' opportunities to pursue and achieve high-qual-

ity education and training beyond high school. Established in 1998 by a consortium of national foundations, the National Center is an independent, nonprofit, nonpartisan organization that is not affiliated with any institution of higher education or government agency. It conducts research and analyses of policy issues facing the states and the nation with a particular focus on opportunity and achievement in higher education — including two- and four-year, public and private, for-profit and nonprofit institutions. The National Center communicates findings and recommendations, including information on state and national performance of American higher education, to the public, to civic, business, and higher education leaders, and to state and federal policymakers.

The National Center is solely responsible for Measuring Up 2008.

For further information about the National Center and its publications, visit www.highereducation.org.
