**SENATE RESOLUTION #2577**

**TITLE:** ASUW Recommendation on Revised Programmatic Fee Implementation

**DATE INTRODUCED:** October 17, 2017

**AUTHOR:** Vice President Welsh

**SPONSORS:** President Wetzel; Senators Blazovich, Colwell, Defebaugh, Kennedy, Rubino, SAL Oursler

1. WHEREAS, the Associated Students of the University of Wyoming (ASUW) Student
2. Government should accurately represent our fellow students; and,
3. WHEREAS, the University of Wyoming (UW) serves as a “resource for accessible and
4. affordable higher education of the highest quality” for residents of Wyoming, the
5. nation, and the world; and,
6. WHEREAS, implementation of programmatic fees for all undergraduate programs at UW
7. would provide sorely-needed simplification of the current academic fee structure; and,
8. WHEREAS, implementation of college-differentiated fees is accompanied by review
9. processes on both the college and administrative levels which enables broader student
10. involvement, greater transparency, and a higher degree of accountability than is
11. possible with the current fee review and implementation process; and,
12. WHEREAS, the ASUW Student Government has been concerned about the protected usages
13. of fee revenue, and is working with the University Administration to ensure protections of all
14. student fees; and,
15. WHEREAS, according to the proposal, these programmatic fees will be classified as
16. Designated Operating Funds in the Oracle WyoCloud System; and,

17. WHEREAS, this designation will restrict the use of programmatic fees exclusively to  
18. student services and undergraduate program support, ensuring the fees will be used only  
19. for their designed purpose, although this same protection does not exist for Mandatory  
20. Student Fees; and,  
21. WHEREAS, increased funding will allow for further development of UW Colleges,  
22. Departments, and Programs to enhance the quality of students' educational experience  
23. and maintain student services which are otherwise jeopardized due to decreased  
24. funding from the State of Wyoming and university-wide budget reductions; and,  
25. WHEREAS, in the summer and fall of 2016, the Revenue Enhancement Subcommittee of  
26. the Financial Crisis Advisory Committee created a proposal to institute university-wide  
27. undergraduate programmatic fees at UW; and,  
28. WHEREAS, in December 2016, the Programmatic Fee Implementation Committee (PFIC)  
29. was charged by UW President Nichols to receive feedback on the original spacing  
30. proposal, modify it as appropriate, incorporate feedback, and develop the policy on  
31. implementation of the plan with a goal of creating a transparent and accountable  
32. system; and,  
33. WHEREAS, in the Spring of 2017, the committee reformatted the programmatic fee  
34. proposal and included students in this process; and,  
35. WHEREAS, Senate Resolution #2544 was written to express concern over time restraint  
36. that prohibited modifications to proposed fee levels, despite significant negative impact  
37. shown by student surveys conducted in February of 2017, and stated "ASUW Student  
38. Government would support implementation of a university-wide, undergraduate  
39. programmatic fees at UW, but not unless the currently proposed levels are significantly

40. decreased"; and,

41. WHEREAS, UW President Laurie Nichols retracted this proposal from the March 2017

42. Board of Trustees meeting in response to Senate Resolution #2544 and questions posed by

43. the Board of Trustees; and,

44. WHEREAS, in May of 2017, UW President Laurie Nichols reinstated the Programmatic Fee

45. Implementation Committee to address questions posed by the Board of Trustees in their

46. March meeting, and address concerns stated in Senate Resolution #2544; and,

47. WHEREAS, the committee significantly reduced the fees to reflect the minimum costs to run

48. the program, eliminating program enhancements, as shown in Addendum A; and,

49. WHEREAS, if the current programmatic fee proposal was implemented, UW would still be

50. the lowest cost doctoral institution in the country; and;

51. WHEREAS, this committee also determined that each program fee should include a common

52. advising fee of \$6 to cover significant resources necessary to support full implementation of

53. a professional advising program/model and improvements in career development, placement,

54. and success service efforts of campus that will benefit students.

55. THEREFORE, be it resolved that the Associated Students of the University of Wyoming

56. (ASUW) Student Government recognize, appreciate, and support the many benefits which

57. would result from implementation of a university-wide, undergraduate programmatic fees at

58. the University of Wyoming (UW); and,

59. THEREFORE, be it further resolved, that the ASUW Student Government believes despite

60. the increased financial strain upon many students, programmatic fees are necessary for UW

61. to continue to maintain the level quality of education that is currently provided and support

62. the Program Fee Proposal as seen in Addendum A; and,

63. THEREFORE, be it further resolved that the ASUW Student Government supports the  
64. addition of a \$6 common advising fee; and,  
65. THEREFORE, be it further resolved that ASUW Student Government is in support  
66. of this proposal only if the UW Board of Trustees and UW Administration can ensure  
67. that these fees will be allocated to the appropriate units and that Mandatory Student Fees  
68. be afforded the same protection through classification as Designated Operating Funds, and;  
69. THEREFORE, be it further resolved the ASUW Student Government supports the  
70. establishment of a University Regulation and subsequent policy to move all student fee  
71. revenue to Designated Operating Funds and determine procedures for Reserve/Cash Carry  
72. Over accounts for the future.

Referred to: SOP, AT&S

Date of Passage: 10/31/2017 Signed: Jaymie Webb  
(ASUW Chairperson)

“Being enacted on October 31<sup>st</sup>, 2017, I do hereby sign my name hereto and

approve this Senate action.” Benjamin D. Webb  
ASUW President

**ADDENDUM A**

**Program Fee Implementation Committee Proposal**

**October 30, 2017**

**(Draft – Version 1.1)**

**This report was prepared by the members of the Program Fee Implementation Committee, in consultation with University of Wyoming Students, Faculty and Staff, and describes a proposed program fee to replace current course and program fees based on feedback from Departments and Colleges, student and public feedback. Previous reports (October 2016, March 2017) described the processes and implementation details required and recommended by this and previous committees. This reports updates where necessary those previous reports, and presumes that policies and processes not outlined here remain as proposed in the March 2017 report.**

Jaynie Welsh, ASUW Vice President  
Glen Whipple, Agriculture (replaced Mark Stayton August, 2017)  
Suzanne Young, Education

## Background:

To address the current funding challenges facing the University, and to ensure the University's mission was not compromised by immediate revenue shortfalls, President Laurie Nichols convened UW's Revenue Enhancement Sub-committee in early July, 2016. The committee's task was to consider the possible adoption of a program fee system to address the funding challenge the university faces while maintaining program quality and expanding student services. The committee reviewed the use of fees at other institutions to develop a plan with market-competitive and cost-based fee levels, and designed a program to be consistent with institutional goals. The fees were to be designed to:

- 1) Maintain instructional program quality by creating a revenue stream that reflects the higher costs of instruction present in these programs. Maintaining and improving program quality is a cornerstone in the University strategic plan "Breaking Through" as described in Goal 1 of the plan.<sup>1</sup>
- 2) Create a revenue stream that allows the University of Wyoming to improve important student-centered institutional priorities, specifically to improve
  - retention rates of students enrolling at UW, which in turn recaptures lost tuition revenue.
  - time to graduation for students at UW.
  - career-readiness among UW graduates.

All of these student outcome goals are also of the highest priority to the university as described in Goal 2 of the University of Wyoming's strategic plan "Breaking Through."

- 3) Be implemented in a transparent manner, ensuring the expected cost of attendance in any program and any program fees assessed were clearly identifiable.
- 4) Include accountability processes to ensure direct instructional and student service benefits can be assessed, and that reviews are implemented to regularly review fees charged.
- 5) Allow the university to assure long-term strength and financial stability by creating a revenue source that is reactive to changes in program needs and costs, consistent with the objectives of Goal 4 in the university's strategic plan.

In October 2016, the committee presented its report "**A Proposal to Implement Program Fees to maintain and Improve Student Success While Covering the Costs of Instruction in Higher-Cost Programs at the University of Wyoming**" to the President and Board of Trustees. The plan proposed a set of program fees to be charged to all undergraduate students (all course codes below the 5000-level) at the University on a credit hour basis on a differential cost-driven basis.

Because of the potential complexity of implementing a comprehensive set of program fees, President Nichols convened a new committee in November 2016, the Program Fee Implementation Committee, to develop an implementation plan. The charge to the implementation committee was (1) to receive feedback from the campus, including students, on proposed program fees, (2) modify the proposal as appropriate incorporating feedback, (3) develop a plan and associated policy on implementation of program fees that provided an open, accountable and transparent system that includes student, college and administrative involvement and (4) to make sure the necessary systems are in place to implement this program by Fall 2017. This committee also was to ensure involvement of students on campus. Whereas the development of the original program fee proposal required expertise in understanding

<sup>1</sup> See the 2017 University of Wyoming Strategic Plan "Breaking Through: 2017-2022," available on the University of Wyoming's webpage at <http://www.uwyo.edu/strategic-plan/>.

program costs and institutional priorities, respect in a community of learning required that students be involved in the planning and development of such a program.

In March 2017, the Program Fee Implementation Committee submitted a report detailing how the program fee system proposed in October 2016 could be implemented. The proposed levels from October 2016 along with the process recommendations made in the March 2017 report were forwarded to the University of Wyoming's Board of Trustees for consideration and potential approval at their March 2017 board meeting. The Associated Students of the University of Wyoming (ASUW) Senate also considered the proposal submitted to the UW Trustees in March 2017. [Senate Resolution #2544](#) detailed the ASUW response. While supportive of the concept and need for program fees, the resolution ultimately did not support the proposed fees under consideration by the UW Trustees. The primary area of concern was program fee levels, and the resolution requested Trustees consider reduced levels of the fees proposed to reduce impact they could have upon program affordability at UW. In response, Trustees tabled the fee proposal in their March 2017 meeting and requested that the fee proposal be reconsidered to determine the appropriateness of fee levels and to reduce them where possible. They also requested that wherever possible the fee structure be simplified. A fee proposal addressing these concerns would be developed by October 2017 and submitted to the university community for consideration by Trustees in November 2017.

#### **October 2017: Proposed Program Fees**

In response to ASUW and Trustees' questions and concerns, the proposed program fees presented at the March 2017 UW Trustees meeting were modified over the summer of 2017 by a new committee appointed by President Nichols. This committee consisted of representatives from the major colleges affected, UW administration and included ASUW's Vice President Jaynie Welsh, along with three other ASUW appointees. As opposed to focusing on modifying the previous proposal, efforts of this committee took a new approach to address the needs of students and the institution. Proposed fees following the committee work in Summer 2017 are presented in Table 1. In this new approach

- 1) We determined that each program fee should include a common advising fee of \$6 to cover significant resources necessary to support full implementation of a professional advising program/model, improvements in career development, placement, and success service efforts on campus that will benefit all students (see Figure 1).
- 2) We determined that on top of this common advising fee, students should pay program-specific fees (see Figure 1) determined only on the basis of revenues necessary to cover costs and maintain current program quality, including revenues needed to
  - a. Recover the revenues from over 100 existing course fees students now pay in Section IV of the Fee Book.
  - b. Cover rising costs in many programs. At the March 2016 Trustees meeting, new course fees were proposed to cover such costs, but tabled at that time to consider an alternative way to access course fees, such as a program fee model proposed here.
  - c. Recover existing revenues generated by "ghost fees" – unofficial fees levied on an ad-hoc basis in some programs to cover material, travel or other support costs necessary in these programs.
  - d. Cover any additional existing program/course needs without expanding or adding any extensive program enhancements.

- 3) This new approach results in net new revenues to the University of \$2.7 million, of which, over half (\$1.3 million) cover new advising costs of direct benefit to students (see Table 2).

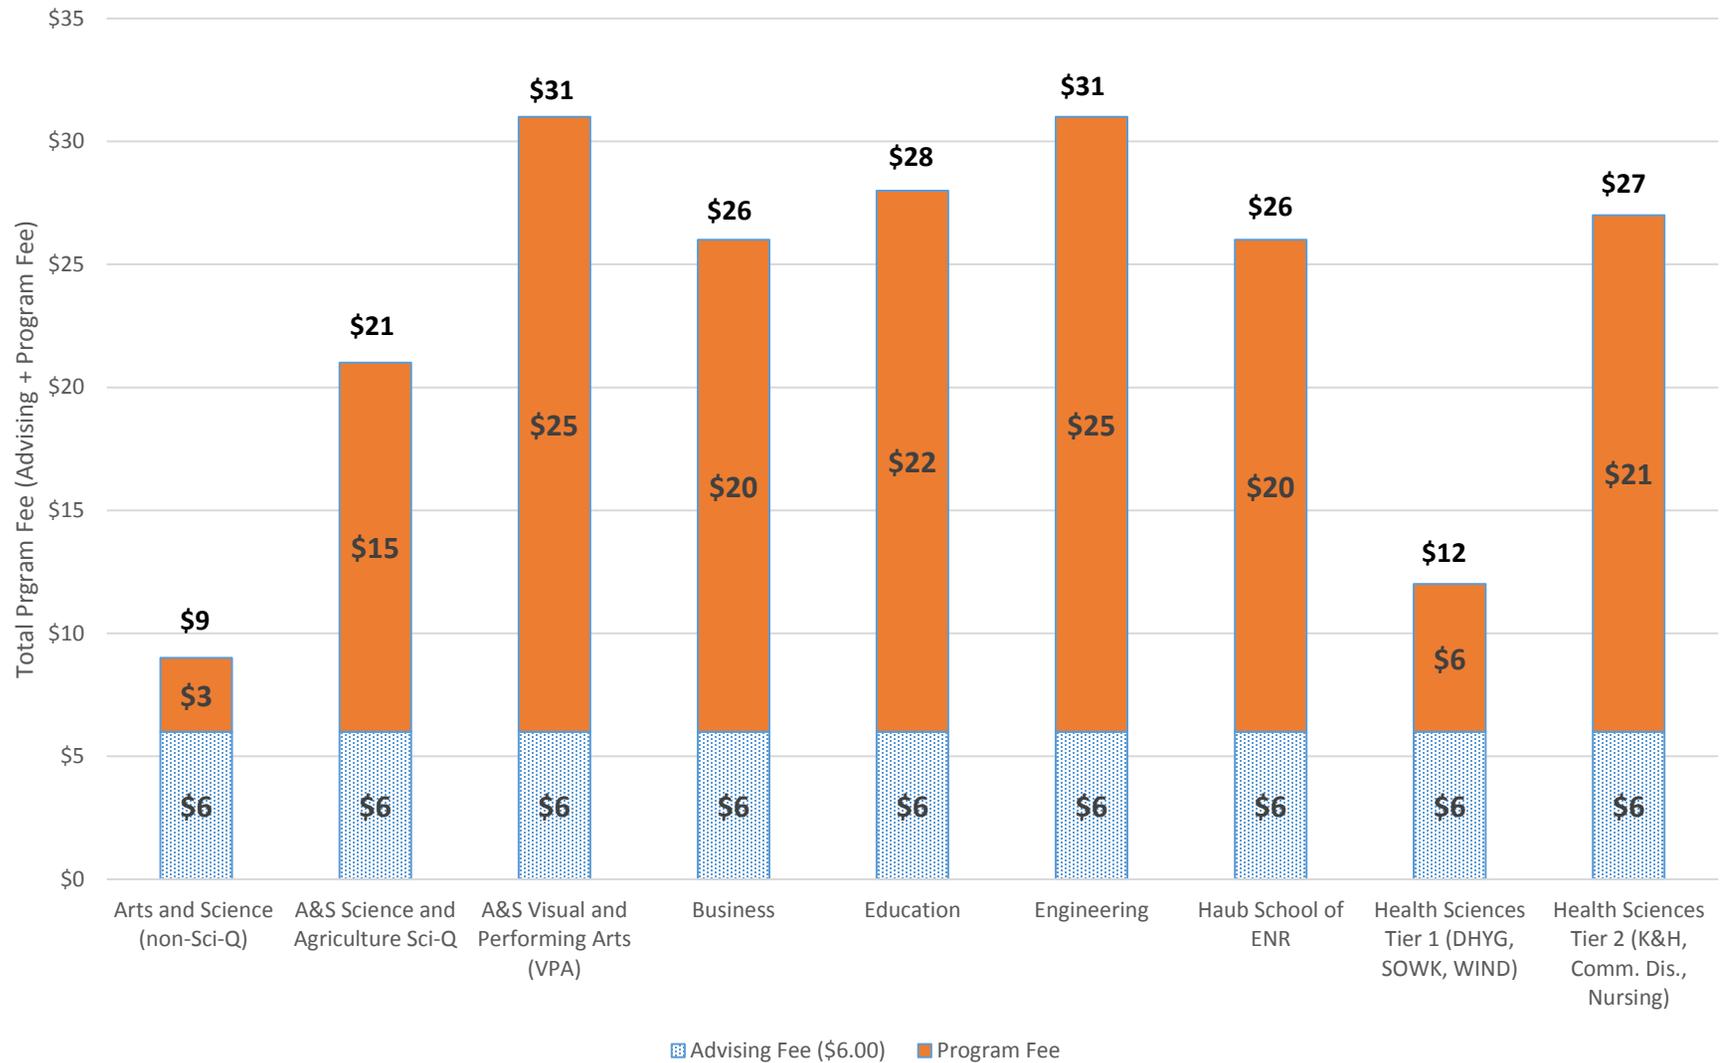

The new proposal meets the general university objective of providing more advising and success services to students that will directly benefit them by expanding advising and success services, while also creating increased resources for career preparation to make significant improvements to student retention and graduation rates, and career success after graduation. The new proposal also

- Reduces the previously proposed program fee levels significantly: Proposed fees are on average 29% lower than previously proposed fees, with the largest reductions exceeding 50% relative to previously proposed levels (See Figure 2).
- Simplifies the fee system: With only 9 fees, the structure of the program fees is greatly simplified relative to current course fees that students face. This allows cost of specific majors and programs to be estimated clearly.

**Table 1: Proposed Program Fees (separating advising costs and assessing common advising fee across all students)**

<b>Programs</b>	<b>Fee</b>	<b>Course Codes</b>
<b>Arts and Science (non-Sci-Q) Programs</b>	\$3	All A&S codes not shown below
<b>A&amp;S Science and Quantitative, and Agriculture Studio/Science Programs (Sci-Q)</b>	\$15	<b>A&amp;S:</b> ANTH, GEOG, MATH, STAT, GEOL, ASTR, BOT, CHEM, LIFE, PHYS, ZOO <b>Agriculture:</b> AECL, AGEC, ANSC, ENTO, ESM, FCSC, FDSC, MICR, MOLB, PATB, PLNT, REWM, RNEW, SOIL

Avg. per credit hour			\$12.44	\$6.44	\$6.00

Figure 2: Summer 2017 Proposed Program Fees vs. Previously Proposed Fees

## Proposed Fee Cost Justification

As described above, the proposed program fees developed in Summer 2017 will replace most existing course and program fees in the University of Wyoming 2017 Fee Book, and any unofficial fees charged in programs on campus.<sup>2</sup> The proposed fees consist of two parts:

- A common advising, student support and career readiness fee of \$6 charged on every undergraduate credit hour attended on the main Laramie campus of the University of Wyoming. The proposed fee does not apply to online courses or courses taken at other campuses.
- A program fee assessed by programs to cover the cost of provision of technology and instructional support, resources, supplies, and program-specific career preparation and advising support.

These two proposed program fees components are justified in the following sections.

### 1) Common \$6 Advising fee

The \$6 advising fee is proposed to cover the cost of hiring 20.5 full time equivalent advisors to implement the University's expanded advising, student support and career readiness services, sometimes referred to by the acronym ACES. The specific ACES program description can be found in additional documents provided by Academic Affairs. Summarizing the new services this program will provide:

#### 1) Advising System Redesign:

- Expansion in consistent, reliably-available, year-round advising with centrally-trained and certified advisors who develop intentional, relational contact with students.
- Provide UW Students with proven advising best practices: Research on student retention suggests best practices to tap this opportunity:
  - **More professional advisors and faculty mentors:** trained in curricular and transitional issues, career/post-graduation preparation, and assisting students overcome barriers and challenges.
  - **Holistic, collaborative and integrated multidisciplinary process:** provide access to support systems before students may even know they need them. Efforts in registration, degree planning, counseling, financial aid guidance, academic mentoring and tutoring, internship exploration,

---

<sup>2</sup> The only fees that will not be replaced by proposed program fees will be the following:

- Music Lessons fees,
- Music instrument rental and maintenance fees,
- Music Locker rental fees,
- Summer course fees for off-campus courses that require travel, accommodation, food support or other costs,
- Travel courses abroad or off-campus that cover travel and associated costs,
- Equipment rental fees such as calculators or fees for special courses that require equipment or travel such as physical education courses in horsemanship, snowboarding, climbing, etc.
- In Education: EDAG 3180 Welding will continue to be charged, as will service fees for non-UW students teaching and being supervised in Wyoming, and for UW students going out of state for student teaching.

international experiences abroad, and career preparation will all occur simultaneously.

- **Constant collaboration between all parts of campus** to identify students who are at risk of falling off track before they do – and to provide guardrails to get back on track.

## **2) Expansion of student success resources**

- STEP, Math and Communication, tutoring, supplemental instruction, and other success services resources will be enhanced and expanded.

## **3) Expanded Career preparation**

- Expanded and coordinated services will be provided to students to ensure they are job-ready on Day 1 of post-graduation, including expanded internship outreach and coordination.

### **Components:**

- Because new students are often overwhelmed by their first experiences trying to navigate the university, first-Year, Outreach, and Transfer advising will be centrally administrated by a corps highly trained professional advisors and counselors. The goal of this group is to ensure all advisors are aware of all resources available to new students to ensure new students are made aware of such resources if needed. Highly trained staff will also minimize advising errors that lead to increased time to graduation.
- Major and program advising will be done by highly trained college-based professionals. Advisors will have to complete a tiered preparation program to ensure they are adequately trained and aware of institutional resources to ensure optimal advising and counseling. This group may include faculty if they complete the required training.
- Faculty will continue to be partners with advisors in selection of upper division courses, exploring internship options, promoting research opportunities, and planning for post-graduation career paths.
- Integration of advising with student success and career preparation to create a holistic approach to student managing and improving outcomes.
- To facilitate dual admissions and to ease paths for transfer students, training and coordination with interested Wyoming community college partners will occur.

**Benefits anticipated to the institution and students:** The implementation of the new advising, student support and career readiness programs is anticipated to benefit students in the following ways:

- Improved and more effective counseling and advising for new students
- Increased, improved and more effective student support services for students needing additional help in certain subject areas.
- Increased retention of students at the university.
- Increased graduation rates and shorter times to graduation.

- Wider support and counseling made available to students that encounter academic and non-academic difficulties while enrolled. This includes financial support and counseling, emotional and grief support, stress, mental and physical health support, and other broader support where needed.
- Greater internship and study abroad opportunities.
- Improved career-readiness resulting in higher post-graduation employment and higher pay in those jobs.

**Resources needed:** The proposed advising, student support and career readiness programs will require significant new resources. Currently there are 10 full-time equivalent (FTE) staff available for all advising, support and career services on campus. The proposed program will require this staffing to increase to 30.5 FTE personnel, and the hiring of an additional 20.5 FTE. Presuming that these personnel, when fully-trained and certified will earn an average salary of \$41,200 annually, with employee benefits costs averaging 56% of salary costs, the financial resource needed to cover this cost is estimated to be over \$1.3 million annually. Using the total amount of on campus credit hours enrolled in by undergraduates in 2016 of 219,280, the average per credit hour cost of this staffing need is \$6/credit hour. **The proposed advising program fee is assessed in an amount necessary only to cover the salary cost required by additional personnel to implement the proposed student support programs.** The institution will reallocate funds appropriately and use other revenue streams to cover hiring, training, office space and facility provision, and management costs required to implement the proposed advising, student support and career readiness program.

## 2) Program Support Fees:

Proposed program fee levels are justified in the sections below. Uses of programmatic support funds raised by the program fees are also summarized in Table 3:

### a. Arts and Sciences non-SciQ/non-VPA Program Fee:

This program fee of \$3 per credit hour in addition to the common \$6 advising fee (for a total fee of \$9 per credit hour) will be assigned to all course codes offered by the College of Arts and Sciences that are not assessed a Science and Quantitative (SciQ) or Visual and Performing Arts (VPA) program fee (specific SciQ and VPA course codes are shown in Table 1). The disciplines primarily affected are Humanities and several Social Sciences disciplines offered by the College of Arts and Sciences. The fee assessed replaces all course fees currently assessed in these classes to cover instructional expenses such as field trip or materials costs, and other course-specific expenses, and also replaces the previously assessed \$34/semester computer fee paid by all students declaring a major in the College. This fee is designed to capture and replace existing fee revenue streams, and is not anticipated or meant to create additional revenues to the college beyond those currently collected in the assessment of current course and technology fees.

### b. Arts and Sciences and Agriculture SciQ Fee:

The \$15 per credit hour SciQ program fee is intended to cover the additional costs required to teach quantitative and science-based disciplines in the College of Arts and Science, and all programs in the College of Agriculture and Natural Resources. The proposed fee is being levied to cover three expenditure areas, and to replace revenues from existing course fees eliminated, including the \$34/semester computer technology fee already paid by students:

- 1) Proposed fees will recover the cost of expansion of the Math Center in the College of Arts and Science, which serves as a resource for students of all colleges needing additional assistance with math concepts and ideas, and to support students needing remedial aid.
- 2) Fee revenues will recover previously identified but costs incurred for specific science classes. In March 2015, over 40 new course fees were proposed to cover the rising costs of materials, instructional support, and laboratory costs in the Colleges of Arts and Science and Agriculture. The proposal to add so many new fees was tabled by the Trustees due to concerns regarding the growing complexity of course fees on campus. Instead it was recommended that a simpler set of program fees be instituted (those proposed here are the outcome of that initiative). Previously identified course cost increases amounted to just over \$268,000 (adjusted for inflation).
- 3) Fee revenues will also address additional lab, technology and instructional costs present in other programs in addition to those identified above.
- 4) The proposed SciQ fee also recovers the currently assessed fees of \$34/semester on every student majoring in a program in the Colleges of Arts and Science and Agriculture. These revenues cover College-specific instructional computing and software needs in Agriculture and in the A&S science and quantitative disciplines.

Total costs of the four areas identified above is anticipated to be over \$784,000 annually, and, based on historic and current enrollments in SciQ classes, the proposed SciQ fee would recover these costs (identified by course code in Table 1). It would not be used for any program enhancements or expansions.

### **c. Visual and Performing Arts Fee**

The provision of visual and performing arts (VPA) on campus is an expensive endeavor. Providing instruction in Art, Music and Theatre & Dance entails incurring costs above and beyond traditional courses and programs at UW. In the past, these additional costs have been covered in three primary ways by students – through existing course fees as identified in the UW Fee Book, through the use of unofficial fees levied on students for additional materials and supplies needed to complete the classes, and by requiring students to provide some necessary supplies themselves. The proposed fee would eliminate the \$34/semester computing fee and specific course fees, and such additional student expenditures, replacing them with a transparent and common fee. The three departments involved in implementing a VPA fee have agreed to discontinue the use of almost all student specific levies and materials charges (official and unofficial) in return for the approval of a standard VPA credit hour fee of \$25 per credit hour.<sup>3</sup> Specifically, in Art, documented materials, supplies and equipment costs of \$115,500 annually incurred by the program would be recovered from proposed program fee revenues. Revenues would also allow the department to supply many materials that students currently pay for out of pocket such as brushes, books, etc. In Music, instructional musical instrument costs of \$115,000 per year, as well instructional instrument maintenance costs would be covered by the proposed program fee revenues. Theatre and Dance would use program fees to cover instructional expenses of \$60,500 per year using the proposed fee revenues for service and facility needs necessary to offer the program.

---

<sup>3</sup> As noted previously, the program fees would not replace the following fees, which would continue to be levied:

- Music Lessons fees,
- Music instrument rental and maintenance fees,
- Music Locker rental fees.

**d. Business Program Fee**

The proposed business program fee of \$20 per credit hour is proposed to cover the following needs in the College of Business:

- Recover revenues currently raised through the levy of a \$34/semester for instructional computer and software needs. The required costs of these needs is \$80,000 per year.
- The College will also expand program-specific career-services for business students provided by the Johnson Career Center, including expanded internship and study abroad opportunities and additional career preparation. Cost of this expansion covering the cost of one additional staff person is \$64,272 annually.
- The reopening of the Communications Studio to provide remedial and additional communication skill services to business students. This service, which was widely praised by students when opened in 2015 had to be closed in 2016 due to budgetary reductions. This studio service would be reopened and a staff person hired at a cost of \$93,600 annually (including benefits) to offer previously offered communications support and help services in the written, oral and visual communications necessary in modern business.
- Because of losses of over one quarter of the permanent faculty in the College, class sizes have increased significantly while course offerings have been reduced since UW's budget was reduced in late 2015. Currently, college faculty teach over 30% more credit hours per faculty member than in any other college. Large class sizes reduce the opportunity for one on one instruction and more intensive smaller class environments. To offset this loss in program quality, program fees will be used to hire additional part-time faculty and to more widely utilize graduate and undergraduate student assistants to support teaching and to offer additional support services to students in the College. Annual anticipated cost off this effort is \$235,000 per semester and would be supported by the proposed program fee.

**e. Education Program Fee**

The College of Education is proposing a revised set of program fees to replace those they currently charge. A single fee will now replace 18 existing program and course fees charged for technology and clinical experiences (this includes specific course fees in Education, and the \$34/semester computing fee). The proposed fee of \$22/credit hour is meant to be approximately revenue neutral, and using the 2015-16 reference data used to define this proposal, the proposed fee actually reduces anticipated revenues collected from students. If enrollment were to stay at 2015-16 levels, anticipated revenues for programmatic support would be approximately \$186,200, while in 2015-16 total program fees collected by the College of Education from undergraduates totaled just over \$197,000. It is anticipated, however, that enrollment increases in the College of Education will allow the proposed fees to generate the same revenues as currently collected. Additionally, a program fee based on all credit hours enrolled in the college will provide a more efficient and stable source of revenues necessary to deliver necessary programmatic support and services in the college. The current system of fees charged on a narrower handful of classes can result in a more volatile course fee revenue stream than the proposed system, making program management more difficult than is anticipated under the new fees proposed.

**f. College of Engineering and Applied Science Program Fee**

The College of Engineering and Applied Science is proposing a program fee of \$25/credit hour based on two goals: (i) recovery of current fee revenues (computing and college enrichment fees), and (ii) creation of a stable source of essential laboratory maintenance and support revenues regardless of budgetary circumstances at the University. Current course and program fees charged in the College of Engineering collected approximately \$280,000 in 2015-16. Using the total number of undergraduate credit hours in this same year, this resulted in approximately an \$11/credit hour cost to students. Since the proposed fees will replace current fees, \$11 of the proposed fee merely changes the means of collecting revenues from fees previously charged to all students. The additional \$14/credit hour is justified on the following basis: necessary teaching laboratory maintenance and support that is essential to teaching the programs the college offers cost \$348,000 in AY2015-16. Using the same year's 25,647 credit hours enrolled in in the college, this implies the average cost per student credit hour of necessary laboratory support for instruction was approximately \$13.60. Assuming a conservative level of inflation of 3% in laboratory costs since that academic year, the cost per credit hour rises to approximately \$14/credit hour. Combining these two credit hour costs totals \$25/credit hour, the proposed fee in the College. Overall the first portion of the fee is a revenue neutral change to simplify the existing program fee structure in the college, while the second portion is meant to ensure that a sustainable revenue source is always available to provide necessary instructional support to Engineering programs, regardless of university funding conditions. Because of the critical importance of laboratories to teach Engineering programs, the college proposes covering their maintenance and support using credit hour charges to ensure that irrespective of the budgetary situation of the university in the future, such budgetary conditions will not impact the quality of undergraduate programs.

**g. College of Health Sciences Program Fees**

The proposed fees in Health Sciences are applied in two tiers to recognize differences in cost and needs across the variety of programs offered by the college. The proposed program fees will cover first the cost of common and required interprofessional education in the college, and secondly, required liability insurance costs. The Institute of Medicine and other professional and health care organizations have called for interprofessional education (IPE) to be incorporated into curricula in colleges of health. At the UW College of Health Sciences, there is insufficient funding for this relatively new and growing mandate. The amount requested will provide funding for a 1.0 faculty FTE (approx. \$107,000 including EPBs) to coordinate IPE activities, 0.5 FTE (approx. \$40,000 including EPBs) for support staff dedicated to IPE, and approximately \$40,000 for instructional design for IPE learning activities and for IPE related activities and travel. Additionally, required professional liability insurance expenses across the college total \$25,000 annually. The College of Health Science proposes to cover these common program costs by instituting two levels of fees:

- 1) Tier 1 CHS program fee: This \$6/credit hour fee, to be applied to all undergraduate course codes in DHYG (dental hygiene), SOWK (social work) and the WIND minor, will cover (i) these programs' share of the \$187,000/year commitment being made to support interprofessional education in the College, and (ii) cover these programs' share of the \$25,000 annual cost for student professional liability insurance all CHS students must carry through UW Risk Management. The fee also will replace course fees currently charged and the \$34/semester computing fee. These

programs do not have other program-specific costs that would justify additional program fees beyond the proposed \$6/credit hour charge.

2) Tier 2 CHS program fee: In the specific programs of Communications Disorders, Kinesiology and Health, and Nursing, program specific additional costs beyond those in the other CHS programs have been determined to merit additional program fee support. In these programs a \$21/credit fee would be levied. This fee would cover the \$6/credit hour IPE and necessary liability insurance costs required of all students in these programs. The fee would replace any existing undergraduate fees, including course fees and the \$34/semester computing fee paid by all students in the college. They would also provide required revenues to support and maintain the following expense areas in each of the three programs:

I. Communications Disorders: \$15/credit hour would be used to support the costs of supervised clinical experiences in this program. The Council for Clinical Certification in Audiology and Speech-Language Pathology (CFCC) requires that speech-language pathology and audiology applicants obtain 25 hours of clinical observation. Currently undergraduate SPPA students obtain some clinical observation through an online repository. The Division would like to introduce clinical on campus-clinical observation and treatment/screening hours as part of the *undergraduate* curriculum; this will enrich students' experiential and clinical backgrounds. Through these experiences, students will complete clinical observations and provide services to Wyoming residents.

II. Kinesiology and Health: \$15/credit hour would be used to cover additional costs required to enhance program-specific career-readiness needs and student support, and also create necessary resources to provide additional instructional support to improve student learning and program quality. Specifically, to improve career-readiness in K&H, a \$21,000/year expenditure would support 1) personnel for discipline-specific guidance/counseling (0.49 to 0.75 FTE); and 2) distance technology to support early career exploration/guidance/ counseling. Fees would also cover the anticipated \$53,000 annually necessary for instructional support directed to three areas:

- 1) materials/consumables;
- 2) personnel; and
- 3) active learning facilities/technologies/experiences.

Anticipated expenditures include: supplies, models (human anatomy service courses), health/sport/exercise equipment, equipment service contracts, and medical disposables necessary to meet enrollment demand; temporary personnel (6-7) to meet state endorsements (health education, coaching, adapted physical education) and to meet instructional needs in areas where disciplinary expertise is not possessed by full-time DK&H personnel, e.g., clinical anatomy, health education, athletic training; active learning spaces that accommodate active learning environments and include requisite technology (video conference multimedia capability) to also meet active distance education/learning needs via synchronous on-campus/distance instruction.

III. Nursing: \$15/credit hour would be used to support additional expenditures in two areas: (i) Clinical Instruction Support & Simulation Lab Support, Supplies and Equipment (*goal*

***\$34,425 or \$10.71 per credit***). Nursing education requires nursing students to have a variety of clinical experiences in simulated as well as actual clinical settings. Providing this type of education requires additional resources beyond the usual costs associated with higher education. The fees support materials, supplies, equipment and staff support for clinical teaching in the Clinical Simulation Center.

(ii) Professional Exam Preparation and Assessment (***goal \$13,775 or \$4.29 per credit***). The fees support student professional nursing exam preparation materials and exit assessment. In order to meet our promise to students of national licensure readiness and clinical practice readiness, students are required to study for and take several practice exams that prepare them to take and pass the national licensure exam. Proposed fees would provide additional student support in these efforts.

#### **h. Haub School of Environment and Natural Resources**

The Haub School Program Fee will be used to support additional program-specific advising and career service programs. The interdisciplinary nature of the Haub School's academic programs, coupled with their concurrent majors and minors, requires a greater investment of time and preparation, and therefore resources to advise each student due to each student's additional program complexity. Typically students will have two advisors – those that they will interact with under the current ACES proposal, and those in the Haub School to ensure that students optimally coordinate their studies across the interdisciplinary programs they take. Additional advising resources are required to address this program-specific need and ensure availability of internship and additional career-readiness opportunities for Haub School students. All program fee revenue will be used to offset salary costs of additional, program-specific advising staff. The proposed \$20/credit hour fee will ensure resources are available to provide an estimated and approximate revenue stream of \$32,000 annually, enough to cover the additional 0.5 FTE in advising personnel necessary to deliver this program-specific need.

#### **Student Impact:**

Impact of the proposed program fees is dependent upon the program of study taken. Table 4 outlines the impact on students in a selected number of majors of the proposed program fee structure using recommended curricula, and compares the increases to those in the previous proposal. Costs assume in-state tuition. Table 5 replicates the analysis for students assuming full non-resident tuition costs are paid. In the Appendix, Tables A1 and A2 duplicate the analysis for the all programs at UW. The tables show the effect of the significant reduction in course fees from those proposed in March 2017. Impact of fees is greatest in the highest cost programs – those in sciences and highest cost programs, and in those programs in which credit hour requirements are highest to graduate. Impact of program fee reductions is lowest in lower-cost programs, primarily because, given the lower level of previously proposed fees in these areas, there was less room to reduce course fees.

Overall, the imposition of program fees does increase the cost of attendance for students. For in-state or resident students, the average increase in the total cost of a degree due to the imposition of program fees rises by between 5.1% and 11.8% for the majors shown in Table 4 (the average across all majors for resident tuition ranges from 2.8% to 12.8% as shown in Table A1). Average cost per semester of the increase for resident-tuition students \$248 (\$226 across all majors as shown in Tables A1 and A2), though the impact depends on the major a student is taking, with increases ranging from as little as \$135 (or

\$27/course assuming a 5 course load) more per semester in English, to \$311 (\$62/course) per semester on average in Accounting. Across all majors, as shown in Table A1, the lowest increase is \$108 per semester in Russian, while the highest increase is \$368/semester in Music. The highest increases are in majors that have the greatest concentration of high-cost courses in their curricula, or those that require the greatest number of credit hours to earn a major – specifically science, engineering or quantitative disciplines, as well as visual and performing arts classes, while the lowest increases occur in humanities-based classes.

The cost increases in the current proposal are significantly lower than those in the previous proposal, reflecting the fact that fees have been reduced by an average of 29%, with the largest fee reductions exceeding 50% (in VPA and Engineering fees). For the majors shown in Table 4, increases in the total cost of education at Wyoming in the previous program fee proposal ranged from 6.9% to 27.8%, while the average increase in Table 4 was 17.6%, implying the new program fee proposal reduces the increase in the cost of attendance for the implementation of program fees by 49%. Put simply, the cost increase has been halved from the previous proposal.

For non-resident students, the proportional increase in cost due to program fees is far lower. Since program fees are identical for resident or non-resident students, the impact on total cost of a degree is much lower for out-of-state students given their base tuition is four times higher than in-state students'. For the majors shown in Table 5, the average increase in the cost of a degree was 2.8%, with the smallest increase in English at 1.5%, and the largest in Accounting at 3.7%. Across all majors as shown in Table A2, the average increase in the cost of a degree was 2.7%, with the smallest increase in Russian at 1.3%, and the largest in Music at 4.6%. Compared to the previous proposal, the average increase across disciplines in Table 5 for non-resident students was 5.6% under the old proposal, and 2.8% under the new one. Again, the new program fee proposal reduces the cost increase due to the implementation of program fees by exactly 50%, also halving the cost increase imposed by program fees to no-resident students.

Using the information contained in the appendix, and assuming that approximately 52% of students at UW pay resident tuition while 48% pay non-resident tuition (current proportion of students at UW), comparing the increases across the majors shown in Tables A1 and A2, and weighting by these values appropriately results in an average increase in tuition of 5.6% across all students before any tuition discounts, scholarships or financial aid, are applied. The average cost increase per semester across all majors in both tables is \$226/semester, or \$45 per course assuming a five-course load. Overall, while the imposition of program fees unavoidably increases the cost of attendance for all students, the new program fee proposal significantly reduces the increase in student cost due to imposition of program fees from the previous proposal in March, as requested by ASUW in Senate Resolution #2544. The new proposal also dramatically simplifies the course fee structure at the University of Wyoming. On these two measures the new program fee proposal can be said to have met the requests of both ASUW and the Trustees in modifying the previous program fee proposal to be more affordable for students, and in creating a simpler and more transparent set of course and program fees, allowing the true cost of attendance at UW to become much more transparent.

**Table 3: Anticipated Program Expenditures from Program Fees, and Projected Revenues**

**Responses to Question 22:**

**"What do you see as advantages for program fees?"**

Yes it will increase revenue.

Every one pays the same fee and it covers the cost for all students

Lower cost for students

The ability to use new technologies

Better classroom technologies, better learn environment

I could see programs doing better because the budget cuts are taking a toll on the university this semester. Maybe the university can be back to usual functioning since we are lacking funds.

Only if the money is used well and not for unnecicary things in the course like many prof do.

Possibility of overall tuition and prices being lowered.

I feel there is none because i dont see any help from the fees in the class room

More money for UW

Program fees possibly help pay for professors and staff.

None

It helps keep the departments running with out raising tuition drastically

Better quality initiatives for students.

Better equipment for labs.

Computer lab equipment

More funding for class resources

I don't. I see this as only as a chance to generate more revenue off of students.

I see me paying more to go to school and getting nothing out of it, the fees got raised last year and I saw exactly zero improvements

Fees can be beneficial to recovering and funding programs that I use while in college, especially when the fees are more specific to what a student partakes in.

Being able to ensure quality courses and a good overall University experience

The more involved a student is the more they pay, which seems fair

I could see an increase in revenue helping the Ag department be prepared by having proper equipment, which would be a welcome change.

Hopefully it will more services offered to students in the agriculture and natural resources department such as tutoring if needed

Better UW

The College of Agriculture would have more funds to work with.

More and better materials for the meat lab and farms

Hopefully better advising and career readiness.

With each college implementing a fee per credit hour, this makes the fee a little more fair (everyone pays the same).

I like that the additional program fees will be used for things specific to the college of Ag and the specific departments. I like the idea that our fees will be used to create better labs, programs, and learning environments for us.

Better quality programs
Fees are necessary in order for the college to operate and for the students to have extra resources in their specific college.
Improved programs
If they improve materials and technology that we as students can use, then program fees are a okay in my book.
I donâ€™t see any
They allow the program to afford what they need.
I mean so much money already comes from a tudents right? Maybe this is lâ€™ll lead to more outreach for the Microbiology department.
none
Program fees pay for necessary class materials, instruction, etc.
For on campus students they support the services.
It allows certain classes to be funded to be better for students.
It might lower cost per materials perhaps?
none
I donâ€™t know
Large programs will be well funded from the students
They fund necessary items.
More support and resources within my major.
Keeping UW an institution.
creating a better environment for learning with materials needed to do so.
Making a more fair structure and allowing those who want to take more classes to get more out the university
Not many advantages that are visible
the cost of education is high, so there needs to be some sort of added revenue to help.
More money for the school
The simplicity of calculating fees, the transparency, and the accountability.
They help provide money to our specific departments to enhance learning.
It simplifies streams of revenue, which is a wonderful thing when trying to cut costs overall.
Being able to have more money for each fee
If they could replace some of the existing fees, so that I am only paying for services that I am actually using, that would be great
I believe this is affordable for most students who do not receive financial aid. For those that do, they should have plenty to afford the program fees.
better learning opportunities for students
I would appreciate better instructors and more instructors. In the Rangeland Ecology and Watershed Mangement program there are too few teachers to instruct the necessary courses which is neither fair to the students or professors
Easier payments and a more orderly payment plan.

More revenue for the University
It would allow the University to put those funds towards things that benefit the students. If it was to go towards something like new artwork for the buildings or something that is not needed in order to successfully teach students I would be against it.
A way for the college to get money
Possibility of more lab time and better instruction. Maybe having bubble sheets being provided as well
Clearly stated.
We could be able to do more things in our class and possibly the programs would be better funded.
The school earning money, making people decide if they really need the class
funding for beneficial programs
I don't receive anything other than course lecture from the university
Cover essential lab materials, replacement of equipment, other assistance provided by department faculty. Keeps things nice and new!
None
More resources and freedom for change will thin the college. More research
There may be a possibility of improved lab resources
Buy supplies
It could allow for more support and better programs for students.
More money
There are no advantages.
Well hopefully it can mean more funding for the Ag college which will help me to become better prepared.
Improved services
I can see that a increase would allow for some programs to provide more resources for instructional material for that class that the program is not able to attain with the current university budget.
Managing a college takes money. If it's needed it's needed. Uwyo is one of the most affordable colleges I have attended. I typically pay out of pocket
It just depends of people budget to afford for the program fees.
You pay for how much education you get
An advantage of a fee is if it will truly help students achieve more results within their class. Are the fees going to make it easier for distance ed students to use technology for their classes?
I can understand that if the college is able to fee students for each credit hour they take the college will have greater revenue. With this revenue, there is potential that students will have access to better resources and indirectly be able to improve their education.
Revenue and improving student conditions
Increased opportunities
Providing money to different programs different programs potentially allowing them to, in turn, provide a better overall experience to their members.
They would be able to slightly better afford materials.
More resources for the college

allows colleges to provide resources for their students.
I don't see any, I see all fees going to increases to teachers who don't care about students
I believe those who advise should be compensated but am unsure of what the fees will really go to
allow students more material/opportunities for learning.
Hopefully better-stocked labs and great in class examples
I would like advisors to be compensated for their time and effort and have it be part of their job description. The fees are a way to do this or to give them better resources to advise more efficiently. Updated lab equipment is something I am willing to pay for since it improves my education and support fees to be used for this purpose.
Simplification
Lumps expenses together and makes them easier for students to understand.
Increasing fees would help to increase the budget within the college. This would not only help students to have a greater amount of resources available, but it would also be beneficial to the school as a whole.
Not having to pay in class fees to attend certain courses
Classes can have more equipment that has to do with the class allowing students to get hands on experience.
I see the advantages being that students will have better access to advising and costs will be covered better.
Any money going to my college I see as an investment in not only mine but others educations too.
Being able to pay all the fees at once.
Improved resources for students
Perhaps more classroom supplies
Some
Funding for new equipment and technology.
Providing for the materials of the class
Not paying the same amount as someone taking 20 credits vs 12 credits would be nice
From the information provided, it appears that program fees will be applied to supplement tuition costs.
This should help cover the costs of the school.
Better equipement for Immunology Labs as well as renovation or potential proprietary building for microbiology, immunology, and the general field in general.
Students who attend at the campus cost UW more than on-line students. It seems very advantageous to them.
Fees are inevitable.
None
Student money will go toward supporting advising to make the program better. Students are paying for the materials that they need for their classes instead of just general fees.
commitment
New facilities are nice to have, but as a distant learning student; this does not benefit me. I do not think students that are not on campus should have to pay it.
I donâ€™t
Easier access to supplies

Encourages people to not skip class.
Allowing more opportunities in class
Better funding and opportunities, better facilities in the future
Paying for materials for arts students
They are being used for something
I see equality and fairness being accomplished campus wide. I see the appropriate cost for the programs and an increase in the programs that don't have to pay as much
Less budget issues
More supplies and opportunities for the students in the program
It's just another way to jack up the cost of going to college. Naming it a 'fee' doesn't change the fact that it's an increase in tuition !!!
The advantage is that fees go to the program the student is in.
Covering costs.
We will have access to better materials.
if it allows the teaching to become easier, then go for it
Cover additional costs the program might need.
It will hold certain fields accountable for fees. Instead of a blanket fee for everyone it is tailored to specific fields and programs which is helpful.
Nothing. All the money will likely go toward things that students will never interact with i.e. they will never see their money in use.
More income for the university, able to afford and maintain new facilities
Iâ€™m really not sure at this point, I would need more information to make my decision.
It raises money for the University and may allow in demand courses to be encouraged by the University.
It simplifies an individual programs funding a little more. Now students pay for what they're doing rather than everybody paying for what everyone is doing.
Could be easier for some students.
Better program opportunities.
More opportunities for students to participate in activities
It will take away the confusion of in-department fees.
I don't have to go and buy fee cards every semester.
None
There might be better equipment available
It makes the university as a whole more money.
Allows a bigger budget for that program in terms of education.
I see that it helps pay for some materials.
I don't see any.
The visual art students would not have to go back and forth from professors to the cashiers office to cover the art materials card fees and have there be as much confusion as there is now with that process.
Itâ€™s good and will surely help a lot of students

A greater ability to visualize the cost of my education.
I see none personal but it does have some positive impacts on other students that use the different programs.
I understand why the University May need to make some changes.
It pays for facilities
Yes, I see this getting rid of the burden of the art materials cards required by art classes.
Resources for the students including outreach students.
More revenue for the college
Possible increase in income for the college.
It keeps vital resources alive.
I honestly don't see any advantages and it seems like the university just wants more money
Specific programs need more money than others.
Be specific to the students that apply to the program fees
Possibly more access to amenities for students that can afford it
None.
More money for programs and materials needed
Greater efficiencies not only for the administrative employees but for the students as well.
Higher quality of labs and equipment.
I do not see any advantages
The advantage on program fees is that the money being charged is going to be used for the students
It will provide additional funding for more involved programs.
Better education
More active classes, like those that are priced at \$25 are good because those classes require the teacher to be able to be more active and physically involved in the course.
Nothing
None
It allows students to pay accordingly to their programs and thus creates equal pay amongst students
Better facilities and services for students
More funding for classrooms is great as long as it directly affects and helps the student better their education
Better consolidation of funds to programs which may need them
Money for trips
UW gets more money
Help cut the costs on the university.
I'm in my last year, I'm bitter and don't care too much
Maybe give a little bit of added instructional value.
More money goign to specific places

I don't see one
Student fees will not subsidize programs or services that the student does not use (in theory, since one could still not use the services the fees pay for).
They assign a certain standard to the class which the teachers must uphold.
More money should mean better instruction.
Not having to buy material fee cards at the beginning of each semester.
Math help, but I probably won't need to use it since I've completed necessary math courses, and advising help, but I'm already close to graduating, so I won't see much of its benefits
strengthening the university programs
The college will have better coverage of needed materials.
It supports programs.
I see that this would increase revenue for the college and possibly allow for more opportunities for things such as field trips or guest speakers.
Helps cover costs.
The proposed program fees will allow UW to appropriately respond to the rising costs of instructing different courses as well as accommodate the budget cuts the University has recently undergone.
Perhaps staff would benefit.
More money for the program provides better and more opportunity
#NAME?
If it actually improves the supplies available for classes, then that could be the best potential benefit.
More money for UW
I can see these program fees helping with educational funding.
These fees can (at least theoretically) place funds more directly into academic programs.
It helps cover the pending budget cuts and crises around the University.
Obviously more money being invested into the school itself has the potential of have a very positive outcome.
Student payment in proportion to academic involvement
If the fees actually go to students in their specific major.
I understand that materials in labs cost more than in lectures, as we need access to chemicals, agars, etc. and that adds up fast. I see the potential need.
Hopefully better materials and supplies for courses that involve laboratory section beyond the lecture. At the very least a reduced cost for supplemental material required for the class.
Better support for students
Students will be able to receive more help with courses and will be able to use more resources.
There are none. But our opinions do not matter because you will still follow through with it.
If the fees actually go to what they say they are for then they would be good but I suspect that they won't all go to updating labs and supplies and advising.
Funding for additional services.
More resources for classes

Better lab spaces and materials available for use in class
An obvious advantage is that the program has the potential to give students more kinds of technology to use to expand their education.
Attendance
It is a gradual way to accumulate a good amount of revenue for the university.
It's nice that the old, out dated model is being replaced
An increase in tutor support and more resources for learning.
More money for the program.
I understand they help fund extra things.
Better quality of supplies/program
They can supplement what I already pay so that we have more resources to use.
Individuals that use costly equipment pay their fair share per semester.
Allows more classes to be funded, even those that are not as popular as others.
This would hopefully fund more programs as well as improvements of things that students need to use a lot on campus in the program.
Not having to worry about field trip cost.
not much
Maybe better equipment.
Cover costs of necessary supplies, field trips, educational tools etc..
I feel it makes more sense for money to be going into specific programs rather than just being paid as a flat rate for all students.
cheaper schooling over all
More funds for programs
The extra support they provide through things like advising, counseling, and tutoring are extremely helpful in being a successful student. The MAC is awesome!
It could help pay for field specific experience.
Better college experience for many students - better advising, more access to assistance, possible shorter graduation time.
No advantages. People choose UW because it's affordable.
Better programs
Make money fir the college
Any money back to the school and it's employees is a benefit.
-
Not sure
I very close to graduating so it wont really effect me as much as freshmen / sophomores
Improvement to courses, materials, and additional benefits to students.
It would be nice if fees were individualized rather than different classes that don't use the same amount of resources getting the same amount of money.
none
For the fine arts department, this will be much easier. One fee for all material costs is MUCH better than several material fees for each class.

Advancement of curricular excellence in order to better serve students and faculty .
None
consolidating fees so that students actually understand them
It can allow for better teacher/student support in regards to technology if spent correctly.
For visual arts students it's easier for them instead of having to buy art cards.
More materials for students to use
Pays for high quality materials beneficial to higher learning.
they help fund projects which would otherwise not be funded
Well if the teachers teach well, so if they are good teachers I can understand it being a bit more expensive (you pay for what you get)
Idk
More coverage for programs at a more understandable price.
I do in the sense that it may help students by buying supplies that may be used over the course of the semester.
Better equipment and learning opportunities.
Not much.
An extreme decrease in enrollment.
It will help those who are in classes that don't cost as much afford college
More money for the school
None
If they are used with students in mind as priority, I think they can be helpful in assisting students with learning
None
The fees are actually less than the original cost
The program fees will allow the university to maintain programs at a level necessary for an institution of our size.
Aid the financial crisis
The ability to have more and or better teaching material and learning material
To better give the student awareness of the programs, and also give knowledge on how to use them.
more supplies
Providing funding for the university to expand programs that benefit students.
the fees can support college programs other than football
It helps fund the activities that professors and students participate in.
It is more fair.
It may be cheaper than the regular class fees.
With the program fees, hopefully, more resources will be provided for students throughout campus and our colleges.
It raises money for the University so that students can have access to newer technology and more skilled professors on campus
Having better equipment and more options to get help with things is always very useful.

In my current lab settings, I can see the lack of money being allocated. In fact, in one of my LIFE 2023 labs experiments our data was skewed purely based on the set up to reduce cost among other lab groups.
I see the stability of programs and program integrity a positive advantage of programmatic fees.
It pays for some materials.
An advantage might be that students not in a specific program don't have to pay fees associated with that program. In this way, students are only paying for what they will specifically need and not for what other students need.
Better facilities and better access to equipment and up to date equipment.
People won't be paying fees for equipment and supplies that they will never use in their program.
Possible reduction in other costs.
None
getting to use updated technology
Quality education ensured.
NONE!
I don't.
More money to keep programs going
I see it being able to update some of the materials we really need and it will add supplemental learning experiences.
Standardized per-credit cost replacing individual course fees is nice.
It would be nice to get more equipment and expand programs. Having 40 students in one lab, with one TA, and having all of us try to use one piece of equipment is pretty ridiculous. Advising and career preparedness is nearly non-existent. It would be nice if we could get some of the people donating millions for sports to give a little to these programs too, but I guess this is what we're left with.
I can't, really
These fees will pay for additional content and supplies for the class.
Not getting shafted by some art classes that have obnoxiously large program fees.
Despite the awkward wording of the explanation (particularly the latter two of the fees, since it was unclear whether or not it was to replace the current \$34 fee) This would attempt to alleviate my issue described in the next section, as well as make those who have more usage per semester pay more.
I think that the upfront cost allows professors to know what is feasible as far as field trips and the purchasing of materials for their classrooms looks like. This would be in place of charging students in the midst of their coursework which would be unreasonable and unproductive.
Having general replacement fees can be beneficial to programs that require material purchasing, transportation costs for field trips, etc.
There is more money going towards things I want and need for my education.
Nothing is advantageous about this
It could be helpful for supplies and needs for the art students but we seem to already be paying a reasonable amount already.
Being an art major we already pay the fees, if they were to be added into our tuition it would be less of a hassle for us.
I see reduced class sizes because tuition will be unaffordable.
Hopefully allow funds for tutoring, and more disability services. The University has few accommodations for disability students.

none
Hopefully the program fees would come with lots of benefits. I would hope more resources, like paid student teaching or paid live text, etc.
It is one flat fee no hidden coats
none
More money for the departments
Makes things easier on the school with overall costs.
It will help with earning money for the university and to keep the programs going.
It may change the fees that each student must pay but it is difficult to quantify definitely without some more information.
More funding for the University and those programs, with this funding the university could better those programs.
absolutely nothing
More resources could be available of the program.
I mean I guess it is nice if it just covers whatever your major is. It is also nice to get certain fees paid for such as field trips.
None
More funding ie.more opportunities to bring in different technology, etc.
It provides money to the department that is much needed, especially in our budget crisis.
The fees will hopefully improve advising and increase the value of time spent in a class.
Better/more materials and resources
We need to be able to take field trips and do hands on learning, so that we are ready for jobs after college. I am a wildlife biology major, so field experience is critical.
I see that it could help our institution financially.
It could potentially allow more money for the programs that require more materials or require a larger budget than other programs/colleges.
Provide more funding to certain programs that may be lacking in funding.
I don't think there will be any benefit by expanding the infrastructure we have now. Its all good enough I guess.
Defers other costs.
Being able to support different smaller things under each program.
Inclusive fees, no potential extra costs to worry about.
better advising and more class availability.
departments make cool stuff happen
By applying it to specific classes it could help support better supplies, while providing cheaper options for those simply looking for electives.
I don't like having to go to the cashier office and buy art cards every semester. If I pay for a class at the beginning why do I have to keep paying fees after I already paid for the class?
improvements in instructor quality, student experience, student resources, etc.
The program quality may be temporarily increased.
Programs that use more resources have the money to receive those resources.
Helping the programs flourish

Help cover cost associated with higher education
Science courses' lab materials being paid for by the students in the classes.
I hope it goes to funding our good staff in the department.
Hopefully better quality buildings, teachers, tutors, and overall college satisfaction
I don't, you all should learn to budget more efficiently.
People like myself taking field trips for geology, I calculated the cost and it would be cheaper per course as well as the rest of my time here at the UW.
It allows the university to keep spending too much money on the top heavy administrators we don't need, while shifting cost of the core mission (education) to the students. Stop hiring and start firing some VP's!
From what I read, this program fee is only beneficial to me if I make the decision to use the resources this fee will go towards. I can't say if this will be an advantage. For all I know, it might be worthless and a waste of my time and money. Or, it could be a great way to enhance my education. There's simply no way for me to say one way or another without first testing it out.
It's beneficial to all students; as such, it's logical that the students would help pay.
Payments can be planned out easier. Seems to avoid paying for things that may not apply to me.
Perhaps the school can upgrade materials and such for the class
The university will make more money.
source of revenue
That professors and administrators might be able to provide teaching aids without using their own funds.
If used appropriately, they could offer more learning or enhanced learning experiences.
Helps the college bring in more money
I understand the need for fees to make programs possible.
Offer more supplies, trips, and other resources for better in class learning
Maybe an advantage for the university.
I attend through the distance program in Riverton, so I don't know that the fees will positively impact me, but I'm working under the assumption that the fees will positively impact the students in Laramie. I view the proposed fees as a natural consequence of the state's budget woes, and as such, acceptable.
I think it will maybe make it easier on billing staff.
None?
The university covering costs.
It may help certain programs cut costs.
More revenue for the university.
New buildings
university revenue
It will increase revenue and make the University of Wyoming more appealing to incoming college students. Having the fees be specific to a program helps justify an increase in fees because the money will be going back towards the students.
It might make things easier to afford?

If things will be foreshadowed as needed.
They help the general population of students at the University.
The university makes more money
Better equipment for the lab would be nice, especially in the physics department.
It would be very nice to have a little extra money in the music department for things they need. From what it sounds like, it seems that this extra money, if budgeted wisely, could go a long way towards helping improve our overall learning experience.
Additional income generated for UW, hopefully, means better outcomes for the students. Funding cuts mean program cuts, and I am more than willing to pay this small fee if it helps maintain our quality of education. As long as it can be proven that feel is going to academics.
The money will help UW and its programs
Help put more money into the university.
No I do not.
I could see an increased spending budget but that about it
Money put towards a better education
they bring in money for the university
A less vague understanding of exactly where the money from student fees goes. This would be an improvement over the very vague fee structure currently in place.
If the fees go completely towards course material- things we can use in class like free exam bubble sheets, lab equipment, etc.- then I believe they can be useful.
no
If I'm understanding this correctly, all these fees seem to be related to obtaining better equipment, and better availability of consumables. Which seems fine and dandy.
I don't know anything about them, so I cannot give you an informed opinion.
More money for the college
Possibly extending some programs or other resources.
The ability to increase the education value and content area. The fees could further our education.
It would benefit the programs
Help maintain quality staff and services
More things to use
I like that I get more stuff.
Levels the field as some programs have less overhead than others
the potential for new and better technology, programs, ect.
Cheaper?
It seems the proposed advantages are things the university should and already claims they do provide. So perhaps they should show that they will provide these things before implementing more fees
More funding for University programs
none
IDK

Going towards UW things BESIDES football, seem to be well thought out.
Maintaining the building and cost of classroom cost, however, I feel that there must be a better way to reallocate money to the classes, or even become greener to help decrease the classroom cost without having to raise the students' tuition.
I see that the fees could be a good advantage if it is being used to make that program better not reallocated to different areas.
Better materials, classroom/building additions, etc.
My perception in regards to advantages is that the fees I will be paying will be used to fund my specific program instead of being distributed throughout campus. This creates a positive outlook for me by knowing for certain that the funds collected from my fees are going to be aiding my education directly.
I do not know.
Students will get more personalized tuition.
None, the course fees should be incorporated into our tuitions cost like every other university in the United States.
Well, at the most immediate level the programs need funding, so there's that. And if the fees are designed & implemented to promote equitable treatment of all academic departments on campus then that's good.
Easier to go to school and afford it
Ease for professors to acquire materials they need
Limits the individual costs for supplies that could potentially
I do not feel educated enough on the matter to give a response
The fees hopefully, will go towards the school needs and not frivolous spending.
I have no idea. College is expensive no matter what you do..
Fees that are specific to the program instead of a general fee for all students could reduce the cost of the program.
Not sure
Funding to help with needed expansion, materials, and other needs to the department(s) that money goes to. However, I must state that any price increase should go to programs that give students the most ROI such as in the sciences, engineering, and medical fields. If students receive a good ROI for the degree they obtained, those students are more apt to give back to the university. Arts are important too; however, the ROI is typically smaller. Most of those students wind up back in college to increase their credit isle to obtain a better paying job once they have children and try to buy a house.
Advantages would hopefully be less budget cuts in the college.
Better advising, my current advisor hasn't helped me in the slightest. If it would take just a little money to have someone who genuinely cares and is committed, I am in favor of the program fees.
The biggest benefit I can see is students would pay more directly for services they are more likely to use. Paying by course instead of by college could help direct money to where it would be most useful to students.
I see zero advantage whatsoever.
Better class quality. I just want to see the fees go to the classes i am in. Don't take my money for my class and use it for some other class.
New technology to allow more students to join class.
-
well colleges need money to run. more money should equal more opportunities

Improvements will made to things that need it
It should help ensure you stick to the program.
Advising is about it. I have never been on a field trip, I never use the school computers, etc. The only thing I utilize that is in the fees is my advisor.
I think it will be more efficient for the college to have program fees tacked on to the initial tuition costs. This makes it easier for the students to know the entire cost of school when they are paying at the beginning of each semester. In addition, I'm sure it makes it easier on the cashier's office (instead of having to go through the process of writing up art fees individually for each art student).
Expansion of the facilities for better education opportunities.
More money for the college.
Program fees can subsidize what is not covered by the already existing funding and since this institution has had relatively low program fees so far this isn't the biggest concern to me.
I think that it will help to provide students with more materials and a greater/more in-depth education.
nothing
The fees, from what I understand, will be part of the general tuition for each semester and the cost will depend on how many credit hours you are taking. This will help out a lot of students who do not have the money to pay the fees outside of their tuition
More programs for the students will remain possible with these fees.
I am expecting with an increase in fees that there will be a noticeable improvement in quality of classes. Students should be advised of the monetary changes. The monetary changes may cause difficulty from some students, which could result in some unwanted situations, of students not taking classes at UW.
yes
more of an incentive to do better in the class.
They may address program-specific costs.
The fees help pay for materials that the course uses. For example the wildlife ecology and management zoo 4300/5300 uses the course fees to help pay for trapping and tracking chipmunks for the teachers project. This gives the students experience handling animals, trapping techniques, and operating telemetry devices.
Nothing
There are no advantages for program fees, especially when they aren't included in the tuition bills. This creates out of pocket expenses that can't be covered by financial aid. The only way to make taking more money from students is to allow ALL FEES to be covered under cost of tuition so that it can be covered by financial aid. This includes all fees, those being proposed and those that every professor from visual arts demands students to pay, as well as the cost of materials that students have to buy from professors.
I don't know
I can see them being an advantage if they were to include ALL supplemental resources ALL of our classes required. For example, WebAssign, MasteringChemistry, etc.
none
lab materials that are used by students that have a limited amount available, will be able to be covered.
Additional resource provisions from individual departments.
I do see the need for supplies but some of those numbers seem to high to me.
Pay for supplies.

Supports the programs
More clarity and money being used where it should be used
It's an all-at-once payment that is directly beneficial to the students, and more understandable that a "\$34 computation fee".
Better funding
No advantages.
The school gets lots of money
Nothing. We pay tuition to learn specific subjects. These "fees" should be worked into our tuition or be supplemented by our tuition costs.
more improvements
I think it would really help the students like my self that use all the programs and recourse that UW has to offer.
Going to college
university nickel and diming me to death
Would benefit the COB
I don't have to pay extra for what I don't use
Students will have access to more support or activities from the university
More funding
Advantages would be the continued operation for services provided by the college.
It seems simple and straight forward enough to understand.
Helping improve my education
A more streamlined fee structure.
As long as we can actually see changes happening and see that the money is going where it is supposed to i am supportive.
No, I think the University planned bad like the rest of Wyoming... learn to save some money so when finances don't go as planned we have a back up instead of just charging the students.
Extra benefits
Increased benefits to students
Higher Revenues for the University
More class options
I think it is Important to give students different opportunities, resources, and, experiences which this helps do.
Weeds out the serious students
Students are not required to purchase software such as Microsoft applications or spss.
None
They go to the University
Money for the college of my choice to give me an even better education.
Yes, I think JCC is a phenomenal opportunity to keep students focused toward the end goal.
I don't see the proposed facilities being useful. So while it might benefit some, UW already has a writing center and the COB does not need a personal communication hub.

More resources available to students
Ability to increase segments of the fee. It is flexible and per/unit based.
Fees based on programs used. Not per credit hour.
I think being able to help keep the JCC going is a great.
Better, more effective use of the facilities being provided
More access to computers, labs, and the college of business in general.
A lot of good for little harm
Helping services in the Business program like the JCC.
Could potentially be cheaper to attend school
N/A
It gives the University a way to charge more while keeping "tuition" low.
Based on individual programs and gives students a more fair few based on their major
It's a convenient and easy way to increase revenues for the college.
It will raise incoming revenue for the university, considering the state has been struggling financially since oil prices have dropped.
Improvements to the college of business. I am all for program fees if they are paying more to instructors, and making improvements to the college and it's parts.
This will be advantageous for those who utilize what will be funded.
It could provide better advising and financial wellness resources to students.
better career counseling
Increased faculty
Some
Helps pay more teachers and students
You have conflicting information, I can't conclude at this time.
We need to invest in our faculty and staff
More Internship opportunities
Goes towards good purposes
I see it adding money to recruit better professors
More classes are able to be offered
Program fees seek to benefit the students of the business college.
More opportunities for students and faculty
The benefits of the fees seem like they would genuinely help the college of business.
It is easier to calculate costs, just multiply by credit hours
The opening of the communications center.
There would be a greater advantage to provide students with an opportunity to excel in the College of Business.
Not much. But it gives opportunities for those who want to take advantage of the programs

Financial gain to be appropriately distributed
I will most likely only benefit from the advising
The advantages are more services being offered and possible part time job openings for students or other members of the community.
They help provide better services to students
We would be paying for only the things that we use
Keeps people on track as it is financially stable to graduate on time.
I think itâ€™s an effective way to raise funds for our college during the down economy
Maintaining the current level of quality
I like having an across campus 6 dollar flat fee. I think itâ€™s important to see where
Support for programs
I think itâ€™s great. We need more money with the state being in the place it is and itâ€™s still a very affordable college
None
I think the funding going to part time teachers and teaching assistants is money well spent as I know that my TA's have helped me pass classes before so their positions are crucial.
I don't know the current fees so I can't say.
Better education and materials provided in class, maybe less outside of school purchases
We might see less textbook/technology program fees.
None
N/A
More opportunities for help available
I like the seat guarantee option and would love to see more support for advising and career planning.
Some people need the extra help
Covering of important costs for the business school.
It should help funding
Pays for RHA events.
More assistants to help students.
Pay for specific amount of hours taken rather than a set total
Saves our broke school
yeah
The fact that they allow for students to take advantage of the resources on campus
I don't believe there is an advantage. I think it a way for the university to collect more money. As per usual.
To improve the educational well being of students and to ensure that each student receives quality education.

If they replace other academic fees and help improve the functionality of our school then Iâ€™m ok with them.
Computer Labs, Johnson Career Center
Improvements to the college
Internship and study abroad expansions.
It provides the University with funds to purchase better equipment, offer more programs, and provide a good staff.
More money available for resources to be used on the students.
It is advantageous for those who are taking smaller course loads.
Bring in revenue for the college
The ability to have greater and more technologically advanced/up to date/knowledgeable resources for students
Allows better access to programs.
High quality education and resources
Great way for students to get involved
I support the idea of more in-depth resources for internship opportunities, career readiness, and study abroad options.
It seems to be an efficient way to generate income.
Itâ€™ll maybe be able to help teachers lessen the load with more grad students to help grade.
Extra staff to help with teaching and helping of students
The fees can help make specific programs even better and more geared towards helping students succeed by giving them the best possible resources.
The benefits new teachers, as well as a comm center, would provide.
The potential for increased availability of student tutoring services, and increased focus on the benefits of study abroad
the new or updating of technologies
I think the \$6 for advising and the JCC would be great because those are two areas that really help COB students.
Unsure
Specifically, I think the re-introduction of the communications office in the COB will offer a great resource to students. I was not very familiar with this office's function before, but if I remember correctly, it helped students develop improved writing skills. I think this could be a great asset to COB students.
No
Helps the university hire support staff
I see room to grow the summer programs.
I honestly don't know too much about the program fees and their benefits compared to our current fees.
None
The amount you pay is based on the amount of school you chose to attend and I think that is fair.
I do not see any advantages.
I don't see any.
Expanded Internship opportunities
They present more of an incentive for students to work harder in the progress for their degrees.

More potential opportunities for students
I think it helps with allocating revenues where the respective costs are, especially if the per hour fee varies from department to department, depending on the amount of additional cost that department requires per student.
Nothing
Increases cost to me.
help in adjusting for budget cuts and fees that could be used for enhancing the college experience
money for the colleges to do things and provide things for its students
More materials provided by instructors since we pay fees and no lab fees.
Having more people to get things done can always be beneficial
nothing
It offers more services to on campus students.
Better education
It allows students to be charged more for specific costs associated with their major.
Financial well-being for the University.
Better student resources
Maintaining quality of programs
They benefit everyone and will have an impact at our time at UW. We hear about budget cuts all the time which takes away from that experience. So it would be nice to pay a little extra so we don't have to suffer from lack of resources because of the budget.
It benefits less serious students who aren't worried about graduating early.
Bring more jobs as well as helps out students be successful.
Saving money
It would create more revenue for the University. The revenue with help the University teach more students.
being able to go to career fair, and other events that we have on campus (our JCC is the best)
Better resources
I understand the need for increased funding, and I greatly support the piece on study abroad opportunities. I am a COB student planning on studying abroad, and I find that I am one of few.
It would give the university extra income to improve programs
University sustainability
If this fee reduces the amount of the current fee I have to pay, then I'm happy with it.
Better staff
More student and professor resources

Better staff More resources for students and professors
More funding for nice things
Paying for things
use of technology and to cover some costs
I think its great to support the JCC and to revamp a part of COB in regards to the lab and its program
It isn't that much but can help the university in the future. Go for it!
I see it being able to support more things for my college.
Being able to pay for some of the best education that could be offered
Reducing added in costs such as LiveText and ensuring that all students have the same resources in the simplest way possible.
I can see this as an advantage because then students taking less hours are paying less while students taking more are paying more, this does make sense. If these fees replace other fees then it could actually be more cost effective for some students, but this is not entirely clear to me.
More staff, better resources, curriculum, etc.
None.
I dont
Putting money into the college to hopefully improve it.
I don't
It's fees going directly into the college ed instead of being split between various colleges.
For people not taking many credit hours it's pretty beneficial
More money for school programs.
If you are taking only a few classes then it is cheaper to pay by credit hour.
The University has more money to work with. LiveText is included.
Not needing to find outside funding for resources such as LiveText.
They probably would improve the experience you have in a particular class.
They can create more resources for students, however, one of the things mentioned was LiveText being paid for by the college for each student. I had to buy that with my own money, so I don't think that was very fair. Also, students in the secondary mathematics education program are required by Linda to take the Praxis II exam for the school to renew their highly qualified status. This exam is not required in the state of Wyoming to teach secondary mathematics, yet the students are required to take it to pass methods and pay the additional \$120 to take it. To me, this should be something covered by the school because it is for the school to gain a status. I would not be taking this test if it was not required to pass the class. What other classes require an additional \$120 to be paid to take the exam for the class? This should be something covered in the program fees.
nothing.
Programs without funding recieve help.
We receive assistance that we wouldn't have otherwise.

The only advantage that i see is that fees might make it easier to keep the UWC program.
More organization for fees
No more buying livetext
They could help in light of the budget shortfall
It will allow for more students to attend this program
Itâ€™s a flat rate. Easy to calculate.
It is good for the professors to get paid.
Should provide for a better education because it's paying for the associated things
More one on one time and Better teaching
That it breaks down the fees. People will pay closer attention to what is going on.
More money for the college of education
Costs are expected
Makes students take classes seriously
No advantages
More opportunities for the students.
Not having to pay separately for LiveText, even though I already have. But still it'll make it easier on students.
More opportunities
I think it helps out each college.
I don't see any. I also haven't been educated on these fees.
I see no advantage as you are still required to purchase all incidentals, and most people rarely use the computer labs, etc.. Even these resources still require you to purchase the consumables, like prints
Including things like Livetext in the cost.
As a student the fees wouldn't benefit me at all. They would be supporting the college for things that they should/do already provide, without giving anything back to the students.
More revenue could mean better programs, if implemented correctly.
Only for the benefit of the universities financial bottom line and not for the benefit of students. I'm not opposed to fees, however, their are offices in the university that cost the college substantially, do little to improve the quality of the college, and reduce faculty's autonomy to teach and develop their programs.
Literally none, this college already does everything they can to drain your bank account and crush your spirit. They do very little to make sure you are aware of different financial aid opportunities.
Would we have to pay the \$150 for live text additionally to the proposed \$28 per credit hour fee? Is that only for classes within the college of education? What about classes outside of the education program?
Access to more materials.
Some newer additions to classrooms and programs for UW Education students.
nothing

Limiting what students pay out of pocket for school.
The school can afford better technology that can be made available to the students, as well as (in theory) give teachers the incentive to better teach.
Not paying out of pocket for things like Livetext.
I like that we don't have to pay for live text and background checks directly
Students that don't use lab supplies won't have to pay for them.
I think common advising could be useful if the advisors are specialized for specific departments. I went to an undeclared advisor and he tried to sign me up for classes I didn't need (speech for an education major).
I really like that as a UWC student I am not paying \$6/credit since I will not have access to the additional advisors. Thank you for that!!
I believe that the education department is actually lowering fees which is great! I won't complain about that!
I am glad they are not including live text in our fees because freshmen that don't take classes that require livetext but change their major shouldn't have to pay for it.
Nothing
This fee could be used for the development of the university and for the individual college's in which students attend.
Students won't have to worry about extra costs like livetext
Livetext
The advantages that I see for the program fees would be that they would supply things for me like background checks, and livetext.
This helps to make a better program for current and future students
I can pay for these things I will need to pay for all at once along with my tuition. I do not have to struggle to pay later on.
This seems better because everything would be embedded into the fees and there wouldn't be a flat rate. This would also make most things covered and available for education majors.
Program fees can be helpful to support the programs and a blanket fee would be easier to maintain than a lot of individual ones.
The small impact to cover fees already paid but that's all, that's even a stretch
I think the fees could be a good idea; however, I don't think they are used to my advantage because I never see anything change.
There are often programs such as Live Text that students may not be able to afford right away, and if I understand this proposal clearly. This per credit hour fee would help pay for that along with all background checks. I think that is a really great way to help the college of ed students.
If everything is included in one fee, I guess that might have some advantage.
Higher funding for improved learning environment.
The services offered.
Colleges need money to run. College fees make it a sacrifice to attend higher learning. Thus, students invest more in something they had to sacrifice to do.
Some of the benefits it provides have good potential but are not fully executed.
Not having to budget for live text throughout the year. Would have live text immediately.
good for the college you are in

None
That they are replacing the already existing fees, and it looks like these fees would be less than before?
help maintain money
I appreciate the LiveText fees and background check fees would be covered.
Either way the students are still paying for the things proposed, like LiveText or background checks, they just aren't paying it out of pocket.
More opportunities for students.
The education program because it would pay for livetwxt and our background checks.
In my opinion, it makes it easier for fees to be organized and how much it actually costs per semester more easily understood by students.
With more funds there are more available resources.
hopefully more class options for different days and time
Live text is expensive, so paying 200\$ for 6 credits instead of 300\$ for live text sounds good, but I don't know all the costs paid out of pocket.
Program specific fees to cover rising costs within departments for services seems like a normal course of business. Clear communication as to their use is important.
The fees can be used to help maintain the school and it's teachers.
making it easier to afford classes.
None, the services are already offered with no charge for the most part.
The program would potentially stay the same or improve.
By making students pay for each credit hour, it will maybe make kids take school more seriously because they will realize they are paying for each credit.
Hopefully more resources provided with the money.
No advantages
As the University is going through massive budget cuts, I think that any sort of revenue is a good thing. Keeping a quality University in Wyoming is ideal.
Nothing
They could provide lower costs for less expensive majors, instead of everyone paying across the board for resources they may or may not need. I don't know if fees are already set up this way or not, I am not very informed on the issue.
Its nice to be billed all at once for tools that I will need specific to my major rather than having to buy them at a separate time.
Money going directly to my pursuits.
Nothing
Yes for those that don't take a lot of credits it can be more money for those that take a lot. And less for those that don't.
None
They'll help improve life at the university
Help cover the costs of required labs and materials
People value anything they pay for. I pay money, hence I am willing to make the best out of it
The ability to know how much you have to pay.
Making it easier to pay and making it a lower cost
I dont

More money to pay for student services and equipment on campus.
It's more of a per use fee rather than everyone pays the same
Keeping the lab facilities in good shape will make life easier for everyone involved with labs.
More people attending college.
Potentially more coming back to the students with technology or things to help us learn.
They would ensure that students can have the best resources possible to complete their degrees.
Better, more improved advising. Basically tracking students more in depth and helping them graduate on time.
The money can be used for improvements in resources and updates the classrooms that might otherwise be too expensive.
Possible higher standard of learning.
Replacing lab equipment is essential, but lab is useless when there is no advantage to labs when they run in total anarchy by the TA
The 25\$ per credit hour seemed really good like it would help bring the labs new equipment and be able to fund lab tasks better which would be great. The 6\$ was vague and sound like you are taking it as profit.
You can easily calculate how much money it is going to cost you before signing up for all your credit hours.
Better environment to learn in
They make it possible to give students great and advanced resources.
Splitting up costs of each major and distributing those costs among the students enrolled in the major
None.
People are paying based on their use of the systems, or at least that is the idea. It makes sense to have more fees if you have more classes.
Maintenance and further spending on my program
I need to know exactly where I will see this effecting my education. If it means there is more of a budget to bring in more educational tools, I am for it.
No idea.
More opportunities for the students
Improves program, better program, better professors, which equals better education.
The college will be able to better prepare itself to move into tier 1 by putting more money in the labs. This will make our college as a whole better.
Can save money by taking less hours
The fees are specific to college giving the college a good source of revenue.
Seems to be more fair to students who don't benefit from the lump sum fee.
I would hope that it would allow for better laboratory equipment.
none
Better equipment and resources
I do think that for some programs extra fees may be necessary, though I feel there are already enough fees for engineers like the computing fees and such.
The program fees cumulatively pay for resources that improve education for everyone enrolled at UW.
Perhaps keeping things more clean.

I can only speak from experience in EE labs, but it is always very frustrating when equipment isn't working or there isn't enough materials for every group. In one of my recent ee labs there was only one bench working so only one group could do the experiment at a time while everyone else waited. If this fee can go towards fixing this issue, I support it.
Only charged for the services used.
per credit hour fees would allow you to not run into what I did this summer and that was paying \$600 for one class because of fees. Where I could have taken two for around \$800.
New resources
none
If Uw actually did what was promised with the fee I would appreciate having an advisor that only does advising as their job and can spend more than fifteen minutes with me per semester.
I dont see all that many advantages. I dont see the degree programs becoming better as a result of this, just the college increasing fees and student financial burden.
None
I really would like the university to handle advising better. That part of the fee program I am fine with.
None, the fees for this university is already too expense. The quality of the education is not very impressive
Serious students
This is an advantage for students taking classes in upper divisions who use more verity of programs on university computers.
Students that are willing to are more committed to their education, I would think.
I think it would be nice to have new lab equipment and and good student advising. That would help with learning and career readiness.
Better resources
None.
Hopefully keeping the high quality faculty, and filling the available faculty positions with individuals that meet the current standard
Buying new equipment and having better software
Better equipment, lab facilities. A more technologically advanced learning environment
I understand the advantages of the fees as only supplementary to the financial aspect for the college, and not so much as increasing resources for students.
None
I pay for benefits in my college not others
It doesn't have any impact on my life
None, probably be wasted as usual
Better education
It's fair, as some colleges and programs cost more. The advantages are that the fees support important technology and support services and take us in line with other schools.
They help keep the college up to date and create opportunities that wouldn't be available without the money.
Possibly more faculty for advising and teaching in the program, but I assume that will not be what this money actual goes to.
Better equipment

Improved curriculum, access to better software and program specific hardware (engineering, specifically).
I don't see any really
Additional program fees theoretically could be used to hire more professors. However, we both know that this will not happen. Instead, the money will be used to increase the salaries of current UW employees.
Not much.
Program fees included advising which I found very helpful
This will allow better up keep on Labs which is important or student learning and development.
More money for the college
They give students more opportunities
They might help programs
Nothing
None. It means my tuition goes up.
the university can stay competitive with other institutions
I can see how these fees will potentially improve the college overall.
If the fees promote actually improving the labs and if advising were to improve that would be amazing.
More money for the school
Better technology. Upgraded.
More money for the University
Overall Improvements in the program and sustainability of the current program
they direct the cost to the students who will be benefiting from them rather than making every student pay when only a select group will benefit
I could see this plan being good if it went to things that would actually improve our learning.
I see that they help the university with the current economy of Wyoming make more
None.
Make up lost funds which is good, need higher retention so we stop letting teachers go.
Better equipment and facilities
With UW's current financial struggles, these will help my college maintain the resources that I rely on everyday.
Motivation
We would be able to purchase new things, or keep technology current.
I want better resources that I can use which I hope will be a direct result of the program fees. Things that will make us competitive and an attraction to talented students.
These fees could help replace old equipment and create a better learning area.
Better advising program as well as more classes within the college
Increased availability of help centers and better involvement of advisory services for the transition from education to the work force.
None
Our research facilities and lab classrooms are a little lacking. This would go towards fixing that. It also continues to support our computer labs.

Specific to the school of engineering there are many benefits that could arise
More money for faculty, staff and student resources.
If they are applied correctly there should be no problem.
There will be more funds to improve the program that I am in so that I can use them later on in my college career.
More ability to keep the financial stability of the college in control.
Nothing
I see better utilities
Incorporate into the costs that are virtually undetectable but felt as the UW experience
I like to have nice labs and maintained equipment.
More student interactions with advisors and better equipment.
The college now has to be less discerning where they spend other sources of revenue, seeing as we already pay tuition for educational costs. So an advantage for the college, an annoyance for students.
What is the difference between program fees and regularly paying for classes
Allows for better student services.
It makes sense that fees for people attending different colleges should vary because they require different things.
Better equipment
No advantages
This fee system is a more "fair" system that keeps revenue for the school.
I don't see an advantage to increasing fees
never advantages
Better facilities
More money is more money
I think the advising funding would be the most beneficial aspect as advising from my previous degree was far from optimal.
nothing
More Revenue for the University. Even though the monetary funds can be better managed to avoid these issues.
Help to have better lab equipment, possibly.
They can help in covering costs of equipment and buildings
I don't see any. If UW could improve it would have without the program fees.
Higher quality learning materials.
funds directed to specific colleges instead of across all.
The improved labs and equipment is essential and would improve my experience at the university.
Lab costs
Increased funding for my department.
Better lab equipment and a well funded career services program

Better quality of classes
Better labs/advising/career readiness.
The biggest advantage I see for the program fees is increased quality of UW laboratories. The labs are my favorite part of attending a university so if the quality of labs cleanliness and equipment upkeep or new equipment is always appreciated.
Help ease the economic situation.
It is a good incentive to not slack off and actually do schoolwork.
Better equipment and more funding for students is always nice.
There is a little mor funding for the college
It seems like a fairer system, where the cost of your education correlates with the cost of the program you're in.
Its fair
Better advising and class offering increase for both semesters.
our labs are trash, I am in internal combustion engines and we did a lab were the equipment would not work correctly. it completely changed the intention of the lab and the TA had to basically create a new lab on the fly. The equipment needed to either be repaired or replaced to make the lab portion more impactfull. This was true for many other labs, the equipment seems kinda old and outdated.
Could be good in the end
It focuses on resources the directly benefit the students.
I think that people could possibly have more access to the things that they need.
you know what your getting.
Later on in my degree I can see advantages but not as a first year student.
Potential growth to the institution I attend
none
Improvement across campus and improved college spaces
Maybe they'll stop trying to fail upper level engineering students do that they have to retake classes and pay more
Depends on what they are used for
No. Quit giving so much money to the sports teams and this wouldnâ€™t be an issue
better lab equipment
It could create more opportunities for the students of the engineering college.
I see potential to be able to better provide for the students and advocate.
It improves the program obviously and allows us to have an up to date lab with proper equipment.
Simplified fee structures
Better equipment, better quality
I see advantages for out of state students paying a little more.

It may very well improve the revenue stream, but I believe that there are other ways that said money could be made without wringing more money out of already destitute college students.
It would improve the quality of the studying environment.
More stability for the University.
None
I feel as though most instructors on campus should be paid a higher salary. In doing so they will generate a better learning environment that will attract more students to study at UW. Furthermore I do not like seeing my school undergoing any type of financial hardship , therefore I fully support added tuition fees.
The fees would help with lab costs.
More resources will be available to students to succeed in their classes.
If you take less courses you have advantage for paying less money for college.
I can see that additional funding could go a long way towards improving the college. There is room for improvement.
More use of technology
Maintenance must be upheld, and money is needed to do that.
If these fees actually help to better labs, and classes, then I am all for it!
Higher quality labs.
You can afford higher quality supplies.
More funding for labs and help for advising.
nothing
I want to improve and support the engineering dept, but that fee represents a significant increase in the tuition I would pay per semester. My tuition for this semester would go from \$1677 to \$2080. I know it is still relatively inexpensive, but it would strain my finances.
Keeping your school funded
Simplifying fee schedule
The advantages of the program fees is that there are possible benefits to programs using the revenue generated by the fees.
I like the idea of certain services being immune to the budget.
Having well-equipped labs seems particularly useful--though I'd much prefer more study areas. I'd hate to see UW turn into a research school--and I'd also hate to see this just be the first of a bunch of slowly incrementing fees.
This makes it affordable for students who cant get finical aid to attend school.
The ability to sustain the program while keeping the fees reasonable. These fees will be able to advance the department without increasing the wages to terribly much.
Being offered a higher level of education when compared to CURRENT standards and conditions.
More money for university
Support the programs the fees are connected to.
Help improve educational experience
Better services and support for me
Cover costs of upkeep.

I think that a small amount from many students can have a big influence on something that needs to be funded.
I think that an advantage is that they make it so that we can and do have the best equipment and materials as we possibly can. For example, if there wasn't computer labs it would be very hard for some majors to be at this institution.
If certain programs want to do certain activities to pay for it you don't have to charge other student that won't profit from it.
Maintaining and upgrading equipment is important, and this seems like a decent way to raise money for it.
Not Sure.
The cost will cover future growth within each program.
Program fees generate revenue that goes towards a specific part of the university. This is good because different programs' effectiveness can be evaluated based on how much they spend versus how much they earn.
There are no additional advantages to students by making per credit hour program fees.
Quality education
I see no advantages to the fee increases. It doesn't get to the root of the problem.
There is no advantages
Potentially better lab space
Better lab equipment, qualified instructors, and student resources.
Allow so certain school opportunities and amenities to be available
New computers in the CPE lab would be nice.
Very little. Labs are useless, every lab I have ever had just increases my work load and leaves me wondering what the hell I just did. Giving more money to a useless lab is stupid. I'm ok with some fees going to my advisor though cause she's freakin rad.
I think the advantage of program fees is that it helps fund the respected department.
I think it will help to college of Engineering to have nicer equipment and nicer facilities.
These fees allow for more resources to be used by students and with more resources to use, we can better further our education.
The fees can help the college pay for, and maintain, better resources for students. Better resources can also bring a better reputation of the education received at the University of Wyoming
It depends on how much is spent on sports facilities that I am paying as a student
Dedicated advisors could imply a higher quality of advising offered to students, and funds added to instructional lab may enhance learning experiences in this atmosphere.
One plus would be the elimination of a technology fee.
The university will be able to hire more non-teaching faculty and support staff.
The per credit hour allows you to plan out the cost of each class and to know how much and when you make payments.
Specifically tailored applications of money to program desires. Upgraded equipment, scholarly opportunities, etc.
none
Better facilities/equipment.
Up to date technology
The school gets more disposable money

I could see it allowing for additional revenue to be used to improve the college of engineering, if the specific departments would have the authority of what to spend the revenue generated by students specific to their department.
More money for the college to utilize for my education
It is an incentive for students to use College facilities as there is no cost to them. It is an incentive for students to also maintain a sufficient course load and not take to many credit hours
Better lab environments, software, and hardware, including upgraded faster computers in computer labs.
Labs are maintained
It would allow more students to remain in college.
It does make us able to have better equipment.
It lowers the cost of probably other none important majors.
I think it makes you work a little bit harder so you don't have to retake the classes and spend that money again.
Another advisor for undergrads would be good, but I don't think that will happen.
additional funding
more access to quality programs, more support for administration and student participation, better understanding of how the money is used
Program fees will help support and provide growth for advising throughout each college. Increasing the quality of advising will help students graduate in a timely matter and will provide essential information for students to properly take classes.
If they can help us be more prepared, then they are probably good.
Because of the incredible opportunities offered by the ENR Haub School, I find it very reasonable to increase the per credit hour program fees.
None
There already is so many unnecessary fees involved with tuition, why have even more?
To keep things running smoothly
That program fees generally go back into the area of study you are in, so therefore the money is returned to you, in a way.
More revenue for the university, able to keep high level of education
It would raise money
I see that it is additional funding for each college, and that can be utilized to benefit the college in whatever way is deemed necessary.
NA
Additional support for those who need guidance for careers and majors
more general fees for all students
Money for specific departments
None
I won't have to pay for other student's lab fees.
it makes it harder for people to want to quit because they are paying
They allow better access to things and better equipment.

The further you get into the program the less classes that have to be taken
I do not see advantages
I think that offering more opportunities is a great thing.
There are no advantages
Better resources
No
Hopefully an increase in faculty and staff
It gives specific programs within the college a way to have the fees go directly to the specific program, as opposed to going to a general fund within the overall college.
Better equipment
Students pay fees for their specific major, so I'm not wasting my money on huge fees for someone else.
Generated revenue
I don't see advantages for program fees unless they cover material needed for the class
Better quality of education
Bring in money
None
Na
I think that the fees will help provide technology to be able to use that we wouldn't be able to otherwise until the real world. This enhances my abilities to succeed.
More money for the school
Not much
I think the fees can help cover the costs for some of the equipment that is utilized within these programs.
It helps to support the university as well as goes back towards our education
program fees allow for resources to be supported to continue education and resources in the departments.
I don't see any because the PETE program rarely sees any money it just goes to Kinesiology
More resources for help, additional supplies
I don't see advantages as I am already paying enough fees and tuition is expensive enough to pay for these enhancements to the program.
Getting my money's worth
More/better resources for students
Better job readiness
Better equipment and more time dedicated to students
In the K&H department specifically, it sounds like most of the fees will go towards advising and readiness for the future which are important. It will also cover liability, which we all need going into our internships
Increased revenue for the clinic
Better equipment for students to have full potential to learning

I see how it can be beneficial to take away the additional fees in the nursing program right now and just making them a part of tuition. I also can see how it may take money to maintain the mannequins and things for the SIM labs.
That there is more money in the program for educational opportunities
Some advantages of this would be that in the end you will get people that are really dedicated to this career because hey are paying that amount. If you are paying this amount then you know for sure that you are getting the education you need.
N/A
I am able to estimate the cost of my semester tuition
This way students are not paying for things they don't need or use.
I feel that our University is in need of revenue. This would be a great way to provide it. UW offers an affordable tuition to it's students, so this bump in program fees - I feel - would be fair.
I like the idea of supporting the fee, as long as that money increases my learning experience here at UW. We already have so many fees, so I'd just like to see a clear influence on my returns.
Have you been in the Corbett building? Why should I have to pay extra fees when the school I go to is a dump. Fix Corbett and then talk to me about adding fees to my tuition.
Better clinical aspect
It allows the University to have more money to spend on resources that are beneficial to students.
Access to better equipment better paid staff
Other fees going away
Paying fees on a college/department basis means that the funds paid would go directly to the department that needs funding, instead of being dispersed across several departments. It also means that when I pay \$27 per credit hour, I know that it's directly funding my coursework, and not being dispersed to classes that are not relevant to me.
Cheaper tuition
I do not see any advantages.
Better education
Doesn't matter for people who have school paid through with scholarships
We would get updated technology to support the material and techniques we are learning.
being able to improve the program
I like that the program fees are specific to individual programs and the cost of the programs.
Continued support of the classroom is good.
Better programs
More funding for things.
The Nursing Program could benefit from having more resources to adequately prepare students during clinical experiences.
This could be useful as quite often the supplies in the skills lab or lacking and out of date.
Fewer people would want to pay and so fewer people would be in the class.

More opportunity. Greater learning experience.
Not being overcharged or not getting charged for an unnecessary fee.
Improvements in the college and its resources.
If I were a student "on campus" I would benefit from the program fees.
Hopefully professors can dedicate more time and energy to hands on learning.
it will bring better resources to the program
it will benefit the students and improve graduation time.
The program can give students more opportunities
More fair to be specific to the program to further the needs specifically for what youâ€™re studying
The clinicals for the nursing and communication disorders.
Nothing
Yes I do but I would think that the amount we are paying for tuition would cover these costs.
Better resources available to students such as supplies like models to help improve learning.
Additional income to support function of program/activities
I think they may help with supplemental educational tools if they are used as they are said they will be.
Better program
If it helps better the education lâ€™m good with it
1. Quality of staff
2. Lab are better equipped
3. Better overall for classes
A better overall education quality
More opportunities in schooling
Better technology and equipment, as well as more faculty and resources.
They replace the technology fee we already pay.
Revenue, maintenance of facilities/programs
For the BRAND program our supplies were limited and of the extra fee can go towards solve that issue I am in support of it
Better resources for studetns
Allows us to do clinicals
possibly improved equipment
More income to University of Wyoming
Better learning experiences such as flu vaccine clinics.
Better programs
more fair, depends on major
They could lower cost

To get better programs
If it is going towards making classes and advising better I believe it will help out in the long run.
Stabilization of faculty at the outreach programs. Possibly more electives offered.
It will benefit on campus students
Having more clinical hours would help prepare students for a job after school.
Being able to see "on the job" situations.
I see no advantage for the fees for the distance program I am in. I do not need the insurance and I don't have labs.
Supporting good programs on campus and allowing growth to fit students needs
New Tech and more hands on learning.
None. Unaware as to where those funds are being utilized.
It means more classes for those who want to take them.
It definitely helps us in our clinical readiness as nursing student.
They show commitment to going to college and if people are paying for something they're more likely to go through with it.
It would eliminate other fees that we already pay
Hopefully an increase in staff so when I call I don't always have to leave messages and my emails will get replied to within a timely manner.
Better allocation of resources per college per student
They help make it possible for the University to provide quality programs.
we get access to computers and libraries
Being able to have enough money for clinicians
I have no idea, I don't know where the money is going to or why it's needed
The money can help advance the technology for the SIM days.
Maybe increased the value of education
As long as it actually goes towards benefiting my college program and classes then that is understandable.
Those who the fee applies will pay for it instead of all.
It might make it cheaper in some Situations
Getting better equipment
No
Better equipment and student opportunities
I don't see any.
It has the potential to make college cheaper if you are smart and use it correctly!
better equipment and teaching tools for simulations
One advantage that I see for the fees is the fact that it helps to provide funding for programs. This is helpful because of all the recent budget cuts in our state. 12 dollars is a small price to pay to help keep needed programs going. Also, I think that our in-state tuition prices in Wyoming are lower than those of many other states, I do not think that 12 dollars is too much more to ask of students.

Students might get benefits
Helps to support university.
Nothing I don't have enough money to pay more fees on top of all the other fees the school makes us.
Yes
I believe improving graduation time and preparedness for careers would be very beneficial.
The advantages for program fees are better services that would improve the readiness of graduates.
None, I think combining colleges and eliminating prof teaching makes the value of an increase stressful.
Better equipment
Being able to be more prepared for your future in college as well as in your career field.
More possibilities for new/better technology as well as benefits toward the clinic for Communication Disorder students
It will allow the program to have better abilities to educate the students.
Better education
Lab equipment, materials to better understand the material.
May help us get a better education.
I feel this might give us a better opportunity to be work place ready at graduation. I don't think you can put a price on the value of education. As technology advances, we have to advance with it in order to be a top runner in quality of education as well as being aware of all there is to know before going into the work place.
I think that it could help the programs run better by having more funds
For students on campus it is probably good.
The Kinesiology department works with what we have, but we could use a lot of improvements. The advantage of this program fee would allow for us to get better equipment, fix equipment that doesn't work properly, and allow for professors and GA's to have better teaching resources.
Programs get funding based on their need (actual costs). Students in programs with less need get to pay less for their education.
What do you see as advantages for program fees?
I don't know
Better school facilities
N/a
Students have more opportunities to participate in clubs and activities that they might not be able to if there were no program fees.
They go to our area of study.
No idea.
Help the programs do what they need to do to benefit the program and make it better
The Uni get a never stream of revenue
Those who take more classes pay more than those who take less classes.
Helps the program out
targeted audience
It is money for the university which is good.

I see that if your fees go to your programs then you will get a better education in your department
Nothing, use the money being spent on unnecessary stadium upgrades
Students in theory wouldn't be charged for more than the classes they are taking.
You pay for what you do. When you take more classes, you pay more.
The money goes to the college
Improving services at UW.
It helps us get things
Mostly nothing. I see no place that my fees are going to help me in any way.
Not necessarily any besides program funding.
Greater revenue for the Academics at the University
More money for programs
Counter balances lost funds from the state, keeping programs alive and well in the university.
It helps us students certain programs pay for things us students wouldn't want to pay for ourselves.
More money for the university means our degrees go up in value
Better budget for unive
I have no idea what these even are?
Fee system is simplified; cost estimation of specific majors and programs more accurate
An English degree which uses less material and consumes fewer resources will cost less than and Engineering degree. And art students will get a better idea of the cost of their creativity.
N/A
N/A
You know exactly what it will cost you to fulfill that course.
Degrees which cost a lot to teach will have proper but also repretative funding
Having a period for add/drop at the beginning of the semester giving you an opportunity to get money back, and change up classes with ease.
More money for the university
I dont really know what they are so I couldn't say
The fees have been low for years, they had to raise them eventually.
If increased revenue could be used to improve the quality of education at UW in any way at all, the fees would be worth it.
I honestly don't know them very well
The Revenue Enhancement Committee video provides a lot of detail about the current tuition and fees paid by UW students and how the proposed fee increases impact individual UW students. The bottom line is that education at the UW is insanely/amazingly/wonderfully cheap. Increasing fees a bit to bolster the quality of education at the UW is an absolute no-brainer to me.
It helps create money for the department

You pay for the things you require and use.

**Responses to Question 23:**

**"What do you see as disadvantages for program fees?"**

Students have to pay more for a quality education.

It is more money that students have to spend (that they don't often have)

Why is it per credit it hour, it should be based on full and part time students

Less money for the school.

Charging more money that some people may not think is necessary

Cost going up for college is never good my discourage a lot of applicants

University of Wyoming is one of the cheapest universities and we are known for this. If prices keep going up, and we soon compare with other schools how are we going to compete? Also so say we do pay these fees and nothing changes. The university is still stressed for money in an economy only focused on coal.

The money will not be used properly and will be a waste of peoples money as the programs will not work

Students who have to take more specific program classes that individually cost more will end up paying more for their degree than another student.

They are a disadvantage to me because i dont see what the fees are used for they dont help me they just make tuition harder to pay

Increased cost, should be covered with other fees

The charge for every credit hour taken can take its toll on a student financially who has to take a certain amount of hours to get into a graduate program.

I see even more fees to pay. Paying for college alone is hard enough I don't need \$21 for each class on top of that. That is ridiculous

Some classes or department dont seem to use them to there full advantage.

Per credit hour is quite the change opposed to a singular fee per semester. This is quite expensive.

This will take away from cost of living expenses

Fees will probably go into something unnecessary.

Less spending cash for me

Cost

Just another way to make money off of students and will not benefit students, i.e. advisors will just as lazy and the programs will not actually lead to job placement.

Losing having my own advisor that helps me a lot and having to go use some advising center that has zero contacts and can't do as much for students

Fees seem to support some unnecessary programs that are generally not utilized by the student body as a whole. Some technology fees are reasonable, but all the fees that support all the various programs, gyms, student centers, athletics, etc are just extra cost that I don't typically utilize.

Though it seems small, this adds up to be hundreds of dollars more per year and I'm already struggling to pay for college. One of the great things about UW is it's financial accessibility and I feel this fee is taking that away.

This may seriously impact some students without scholarships

Increased costs to the students, losing interest in the Ag program from families that can't afford the increased cost.

It will be more expensive to students

Mo money mo problems

Out-of-state students like me from Indiana came to the University of Wyoming for its program and low cost. If a program like this is used, coming up with the money may be more difficult seeing how I do not apply for many of the scholarships since I am not with a certain state border.

Itâ€™ll cost more
Although UW is a cheaper institute to attend, it is still expensive, at \$516 per credit hour. For most families and students, this is already too expensive and the amount of student loans that students are looking at after graduation is tremendous. With another raise in tuition, it gives students less incentive to continue attending.
This program may be a little complex because every college has different fee amounts per credit. If a student took courses from a different college, then they may not know what the fees would be for those courses.
The money needs to be accounted for. I suggest an audit or report every few years to show students where their money is going. My biggest beef with the program fees is not that they are going to be present, it is what the \$6 fee will be used for. As an Animal and Veterinary Sciences major wanting to go to veterinary school, undergraduate students NEED veterinary advisors from day one. I also think that being assigned an advisor from your freshman year on is helpful to the College of Ag's creation of community.
Non affordable programs
Program fees can make people unable to attend college.
Fees collected that don't necessarily improve the quality of the classes
I see there being disadvantages when some of the fees go to things with in the program that very few students use.
Less students coming to the University of Wyoming, specific programs will lose students due to high programmatic fees and the university will lose donors as alumni will be less willing to give money
They could be too much for some students.
If the fees are for labs, the majority college of ag does not even have labs
How in earth can the only revenue stream be students? I already pay student fees for the gym I never go to and the football games I donâ€™t attend. You should let people opt in to the fees they are willing to pay for
i may not be able to afford tuition
If that's the case, what is my tuition paying for?
I am not on campus and don't see how the fee will help me.
They add up quickly. For a student taking 20 credit hours, it adds an additional \$420. (Unless the fee change is adding fees, and not simply changing them from a previous, higher number)
I will be paying more per credit hour and that will cause a larger burden on me and my schooling. I choose Wyoming because I was going to be able to afford it more and with an increased fee I might make it become cheaper to go else where.
Adds up.
Smaller programs may have issues covering costs without large fees.
Where do they end? Often times we pay fees that fund areas we are not involved in or do not support.
The expenses adding up quickly depending on number of courses taken.
Increased financial burden on the students. This additional cost could lead to some students not being able to attend, and other students graduating college with an increased debt load, which could lead to lower post-graduation success.
college is already expensive for some and adding more money on top may cause it to be a little too much for some.
higher costs for people who might be struggling to pay
Most of the services go unused

Paying for services or technology that is not being used. Such as computer programs, lab fees, and other fees that are added, but may not benefit the individual student that is paying for it
Increased cost
None.
College is already so expensive, a few extra dollars can seem like a lot.
I think they can cause students to pay for services they will never use. It makes sense in the long run, and UW will still be much more affordable than other universities. It's just always hard to see costs go up when you might not see any benefit.
The more money going into college
Added costs
For those who are in need, some may struggle and need additional assistance in finding financial aid that can help them.
We're paying a lot of extra money in fees.
I see the program fees as making the University of Wyoming a less attractive option for students who don't have financial aid and may be paying for college themselves.
Not everyone being able to afford the fees
I don't think that money is managed throughout the university in the most efficient way. Fees were already increased without the improvement to programs across campus. My fear is that these fees will not have the desired effect due to mismanagement of funds. This will lead to increased difficulty in affording college while maintaining the same quality of education.
Too expensive
Higher costs for students
If people are not careful it could be used as a gateway to continue to raise the cost of schooling and make it more difficult for students to be able to obtain an education.
More cost for students
I may not see any benefit from paying extra. I may not get more labs or even better teaching. If I pay more I expect better teaching
I'm not sure what services will be available to me with the increase in pay. Per course fees might add up to cost more than a bulk fee.
It may be an unnecessary cost for some students
take up money and people may not have that.
im not sure what these programs are or how/if they are beneficial
I am paying for someone to have a job that does nothing to assist me.
Impact varies depending on class/major in the department. Some classes I can't justify the \$21/hour needed
I still have to buy all of my materials like books and scantrons and clickers.
Affordability, excessive
There are many who struggle to pay for tuition and housing now, adding more fees will make that even more difficult. Also, with many of the agriculture classes, they don't have labs so it would be a concern as to what the money was used for and if it actually stayed within the college of agriculture.
Makes it hard for other students
The added money could cause issues for some students to be able to afford going to school.
More money paid by students

We as students still have to pay for printing our notes out and purchasing books. There are really no extras supplied
I take 20 credits a semester usually so that can add up to a little bit of money overall. Also I'm worried that the fees won't be appropriated evenly and that there will be a few programs at the Ag college that won't receive the money they need.
Ability to afford tuition
No one likes paying more money, while the college of AG is proposing just a small increase other colleges are planning on a much higher fee so those programs maybe hurt by these fees. With my proximity to graduating the fees would just have to be something I eat if they were higher because my options would be pay the fee or not graduate.
Online students are generally completely separate from the college but pay the same amount as on campus students
The people might have a hard time to pay the program.
It discourages enrollment in classes with more credit hours, like sciences
If I get feed \$27 per credit hour, that ends up being close to \$100-\$150 per semester. I am paying for my own college, and an extra couple hundred dollars every semester on top of the books I already has to pay for starts to add up. I understand the benefits, but I feel that I am rarely, if ever, directly impacted by the increased cost of college for the better.
Maybe the money is being wasted?
No disadvantages
Most people aren't necessarily "turned on" by extra costs and fees.
Students such as myself would be charged nearly 400 dollars more per semester. Which makes it much harder to afford college.
An increased cost of attendance while scholarship amounts are remaining the same
it costs students more money.
I see these fees being wasted on services that students dont need
May not be able to afford certain experiences and would have to pay more out of pocket costs for the same experiences.
Misuse of these fees for administrative stuff
As fees vary by college, lower fee courses may be chosen over higher fee courses if they are electives that can be flexible.
The need for them, and their existence.
I see a lot of students stepping away from college and not continuing their education due to costs. College is already expensive for students, plus all of the extra fees that rise throughout the year, so having an increased program fee may turn some heads.
Potentially paying more than needed for courses that don't require the fees
The money paid to the college of my major is not receiving all of the money that it earns from the credit fees.
It is costly but comparatively to other universities it is not a problem
Too many fees, increasing the cost of attending when tuition is expensive for some.
Resource improvement for only a certain percentage of students.
\$2,520 extra over a four year period is a disincentive for both resident and non resident students.
Again there are some
I don't see it being used.
It may make classes less affordable for other students

I am an online student so I do not know what materials I would really be paying for
It might be unfair and leave people paying for services they don't need or use
no disadvantages...grumpy students and parents?
There are already a lot of fees we have to pay, so why add more?
I'm a broke college student who can afford tuition... barely.
I don't know if UW will get the message but I'll try anyway - You need to expand the on-line program to include STEM degrees. Then you could charge more, get more students from other parts of the country and you'll be more successful.
Some students may not be able to afford that.
Everything
Students taking lab-heavy classes will end up paying more in the long run than students in more theoretical classes.
People do not like fees everytime they turn around.
College is already extremely expensive
Some people might not be able to afford it
It's expensive, I'm barely getting by as it is.
Being costly or used for nothing
Higher tuition
Cost
Some people may not be able to afford it
Some students will be paying more, and they may feel as if this is hindering their education
Higher cost
It makes it harder for some people to afford, especially out of state
t's just another way to jack up the cost of going to college. Naming it a 'fee' doesn't change the fact that it's an increase in tuition !!! Call a duck a duck and stop trying to tell me it's a Turkey !
The disadvantage is the fees are expensive.
Paying for services I never use.
Some students will be impacted negatively since it may hinder their ability to participate financially.
if it keeps increasing, then so does tuition, which as an "out of pocket" student. that variable is weighed heavily.
Costs students more
Increased fees are a red flag to students who are wondering where their money is going. Students would much rather spend extra money and fees if they are going to something useful instead of wasted money on projects that students don't use. As a Geology Student I have little to no use for anything in the Arts and Sciences department as everything I need is in the Geology Building.
More money to spend, likely little return.
higher, even if slightly, cost, which is hard for low-income students
The only disadvantage I could see is if this is just the beginning of new fees to come.

The rise in costs for services a student may never use is offputting and irritating. I've never even met my academic advisor in person. In addition to this, there's no way to truly ensure fair quality for the work of the advisors assigned to students, meaning that you may be forced to pay for an advisor whose services are subpar.
The added cost to say an engineer, or other major getting hit by a lot of fees will be too much for some students to take on. For the poorer students in those majors it may force them out of school.
Possibly more money for other students; more money to struggle getting
I see no disadvantages, it's trivial money at the individual level
Most students don't know where their program fees go
It's more money that I have to spend.
We pay too much for college for the type of education we receive
College is already expensive and since the university devotes so much money to athletics, the increase in fees is annoying
It costs me more money for things that I'm not even related to. It says it helps cover the cost of the Math expansion, but I'm not even in a math-related field. There are multiple construction activities going on around campus, so I assume this money will also help pay for those, which I'm not related to either.
It's more expensive all around and could affect certain students.
I already pay for my own expensive materials for all my art courses, and would rather the fees be applicable for payment through grants and student loans.
It could raise tuition experience fees for people who are already taking out loans.
I don't know
It takes a step more of thinking to compute the cost of education. NBD
It is a socialist program and much isn't centered around education purposes.
The rising costs of education.
Most of the time we are paying for things we don't ever use. It says it helps pay for certain things but you never see any of the benefits as a student.
No, I think it's necessary to consolidate them this way.
Some students may not be able to afford it, or it may not even help.
You'll piss off a lot of students. Continuing to add superfluous fees only adds to the common mentality that many students have that this college enjoys robbing its students. Stop trying to take more of our money if you like to tour about the colleges inexpensiveness and affordability.
More expensive tuition depending on degree types and minors pursued.
Non-athletic students are paying the price of budget cuts to academics, while our athletics department continues to expand in an unbounded fashion.
It will drive people away
Students struggle with the cost of attending school as is. Raising fees not only makes the ability to go to school harder but also puts a bad taste in student's mouths about the institution.
Being a target of those with program fees
Scholarships like the Hathaway will eventually not cover as much as they originally did leaving students who are scholarship dependent in a bind
More money for food, more classes, and continued education.
Students are broke as it is and this will make it harder to pay for school

Not all students use the Math tutoring center and other programs even though they probably should.
Discouraging students to declare a major in that specific college.
The University is taking more money from us.
In my experience due to not qualifying to many of the scholarships, Federal funds, and the Hathaway, adding small amount of money can accumulate in a small period of time and it can do a change on student expenses.
It will discourage students from certain majors if it costs more.
Some students won't be able to afford it
Courses that are for quantitative and research studies should not raise in price because those professors tend to care more about their own research than teaching it.
The cost of college when we already pay to go to college.
Yes, stop spending money on athletics
Some will have to pay more
Increased cost of college
College is already super expensive, so any additional fees will require more scholarships and tuition
More money out of my pocket that I may never get to take advantage of. I don't like paying for other people, especially when I'm already paying a lot to attend
All of my classes are performing arts and I will have to pay a fee for everything which will add up
I have no idea where exactly my tuition money is going.
It is already quite costly with supply fees in the Art Department, especially because you have to pay per class. I think going by hours would be highly disadvantageous for art majors. We already pay a lot of money to attend.
Higher cost of tuition for students
It is a better long term program.
We are adding fees to everything while limiting courses, IT is minuscule, and student services are getting worse yet cost of attendance goes up.
More money that I don't have and not sure as to why we need added fees in the first place.
More money for the student to have to pay
More students forced to drop out because they can't afford the tuition
Programs that have less students or more expensive services/equipment can lose funding that they used to get from all students, or they could lose students who can't afford the program-specific fees.
Each subject is equally important. One should not be more expensive to study than another.
I think the money will be reallocated to other things.
I know that visual arts classes do not provide any materials and the materials the student have to buy are extremely expensive. It's double charging some of the poorest students.
Money going to other programs that my academic career is not interested in
Rising cost without a rise in the wage of jobs around town
Punishing for STEM majors, we aren't the only ones who need services offered to us, many majors outside STEM aren't being assessed fees and arguably would need the services as well

loss of students
The program causes students to find more money to pay for tuition when we already have fees for practically everything.
It could be very expensive for students.
I see that this could possibly keep students from taking courses considered optional. They are going to weigh the fee of additional credits against what they get out of it and not see any benefit.
It discourages students to take classes outside of what is required if them to explore various interests or build skills not required for their degree but perhaps useful for their career.
The program fees are categorized in such a way that they do not accurately reflect the costs of instructing different courses. Some courses I have taken were categorised as belonging to Sci-Q or STEM fields based on NSF guidelines. These same courses are delivered solely by an instructor and a whiteboard, yet they are receiving significantly higher fees than other courses with greater costs of instruction. The program fees should be based on an evaluation of which courses are associated with greater costs for delivery.
Outreach Students pay for services they cannot use.
No one wants to pay more money. College is expensive enough
-Increased fees are increased fees, It doesn't affect me; however, it may affect other students in a negative way.
Would students have to pay these at Knight Hall? That would be cumbersome and I'm sure many students would not comply. Also, why can't these just be built into the tuition cost? It is extremely frustrating to have fees on top of tuition, as it feels like the university is trying to swindle or trick students.
Music students have to take a lot of credit hours, and \$25 per credit hour adds a lot of expense on top of everything, like lesson fees. Also, as a vocal performance student, I use practice rooms and depend on well tuned pianos my pianist partner can play on, but I never touch a physical instrument other than pianos in practice rooms, so the \$200-\$450 or so added cost per semester doesn't on the surface appear to have much impact on my life. This being said, I may be missing something important that would make it beneficial.
Another expense for students
A disadvantage I see is low-income people, who are able to go to college because of scholarships, not being able to afford these program fees. I guess I don't understand if financial aid/scholarships will cover them?
These fees are not necessarily assessed as an upfront cost (as tuition is), which makes them deceptive and a bit unsavoury. Also, I do not know if all scholarships will pay fees (as opposed to tuition), which is problematic.
It makes it just that much harder for students to make ends meet each semester to pay for classes and everything else.
The potential for misappropriation of funds is higher with no real guarantee that this is how the money is going to be spent. I don't think it would take a whole lot of convincing to spend an extra 100 grand on our mediocre football team to have some state of the art crotch warmers for when the bench is a tad cooler than tepid
Increased cost for students potentially dissuading them from taking courses they are interested in; program fees are lumping together certain colleges/majors and the cost may fall unduly on people who don't reap the benefits
That the football program will get their filthy hands on it. Maybe coach Bohl needs another million dollar bonus.
We already pay a great deal for these classes, putting a \$9 or \$25 dollar fee per credit hour bumps tuition for a full-time student up a couple hundred dollars. I already have trouble feeding myself, paying bills, and not going into debt with the prices the way they currently are.

A deterrent for choice of major by the students in a lower economic status. Incentive to choose cheaper courses over more expensive ones.
More expenses for low income students
Many students would not be able to afford the costs of the added fees.
Many students may not be able to pay these extra fees.
Losing the wide spectrum of student population from in state and out of state. But our opinions do not matter because you will still follow through with it.
Increased tuition fees
Higher prices and students not wanting to register for specific classes
some students may use more than others
Students that are struggling to afford college won't be happy with fees and may not be able to attend.
More money
Its a change that is forcing an increase on costs for students. Some may have an issue with this. The tuition for courses are still being increased each year right? The next academic year might have a large jump in price for students and I think its important that they are prepared for it.
However, I don't ever really see how those fees are applied in my classes. As an English major I just don't see how paying these fees benefits me.
More money to pay. This money should be taken away from athletics and into academic side of the university.
Less affordable for students with all the fees.
College students, unless wealthy or have a lot of financial aid have a hard time already paying for everything.
Its going to increase the cost of attendance
I'm a double major in two conflicting degrees (music and communications) and because of that, I take between 17 and 20 credits a semester, sometimes that is over 10 classes. Needless to say, I quite literally cannot have a job during the school year. That's only a bad thing because then I get hit with extra fees and hundreds of dollars in textbook and supplemental material cost. So I'm constantly super broke. But I guess having grocery money isn't terribly important.
I have to pay for fees on top of tuition, books, and other costs.
These fees could introduce problems for students struggling to pay for college as well as cause a lot of stress for students who are already deep in debt. Which is everyone sooooo.
It's more money that can be hard to come by for some people.
They need to be included in tuition. I had to pay art fees while also paying for my supplies. none of the fees benefit the students on that level.
The costs rising as I take more classes.
Reduces viability of attending school for some students.
it could hurt the overall quality of the schooling
Most of these fees are of a maintenance nature such as technology fees and in a 16 credit semester, a student is going to pay hundreds. These fees will add up and many people will go to other universities that will now cost just as much in South Dakota and Colorado... UW should definitely continue trying to class up their image, but not at the cost of running off the majority of your local Wyoming attendees with bloated costs.
As a math major, my fees may get used to help non-math majors, because all students are required to take some form of mathematics.

The cost of college is already so high that someone like me can only go to college because of merit and some luck about whether I get a satisfactory amount of scholarship. I think this will pressure more students into a community college where education can actually be afforded by someone from the middle or lower socio economic class.
Rising costs are always difficult to accept, college is already expensive.
People deciding to go to a different college.
More cost per credit hour
Students could be turned away from higher fee programs
Some people might use it as a base to complain, but UWYO tuition is so cheap anyways that they really have no room to talk.
-
Extra money
For out of state students its just another cost on our already really expensive college education and unlike some scholarships (like the Trustee's) we have to pay in full so its really not "fair". Also if I have to pay fees my last semester its ridiculous because I would not have time to use the extra services that it offers with paying fees
Making it more difficult for lower income students to attend the university.
I don't think it's fair to make students responsible for helping pay for the Math Center expansion who won't use it. My biggest concern would be being charged for services I never have or never will utilize.
just more money to pay
Some people will still not be able to afford them
UW would be losing a small part of what makes it a good college, it's low prices. While these price increases wouldn't have a huge impact, many students are already at capacity in terms of financial debts and any increase may discourage attendance.
I'm already struggling to pay for college, even a couple hundred more dollars is a big deal to me.
none that I can see other than the slight hike in price
Program fees start as being tagged as such, and just like everything else, starts being used for something else.
N/A
It will get expensive to go to school taking multiple credits
Gives students extra concerns in addition to course loads.
I am paying out of state tuition so it makes it more expensive, and I'm already paying quite a bit more than in state students and it just makes it that much more expensive.
Spending money on what I don't use
Sometimes you come across bad teachers, that you cant seem to learn from... so it is a waste of money and time.
Some times it stresses people since maybe they cant pay for it, which often leads to distractions in their studies.
Idk
Is this really going to help the program? Is anything going to be taken away?
I think that the fees may make an impact on whether or not some students may be able to go to the University.
Just if there was another way we could cut spending else where to help the average student out of not paying more
Fees and cost here at UW have led to me eating out of dumpster just to be able to have two meals a day. I'm even an instate student and have Hathaway. School is just rising in price.

An extreme decrease in enrollment.
Other majors may have difficulty paying as much for the newly proposed fees
Itâ€™ll get too expensive for people to attend
Everything its a money grab by the university
Most of the time fees are not used to the best of their ability and seem like a waste of money
I have never taken a field trip or used anything besides a few handouts from my professors, so this fee does not seem like it would be used to help me in any way.
Taxing students dependent upon their majors is discriminatory.
College is already expensive and student loans can only cover so much and if we have to pay this out of pocket that can prove to be difficult for a lot of people
It raises the amount of money each student needs to pay which may affect people's ability to remain in school.
Lower student population
Definitely the additional cost per credit hour.
Getting feed for no reason if the student does not use the programs or is not needed to.
I won't be able to attend the university
There's no way to guarantee that the revenue raised through these fees will actually benefit students or the environment at the university.
it costs money
At times it can really add up and, especially for the art programs, they are not upfront in saying there will be this fee. I feel like the University shouldn't have these hidden fees after the student has entered the class room for the semester.
If we still have the regular classroom fees upon this that would be a lot to pay.
Obviously, if tuition raises, that will be a disadvantage for all students.
It drains students wallets and may cause a lot of students to not be able to attend college because they cannot afford it, or they may have to pay back lots of money in loans when they age.
Disadvantages are, of course, more money to go to college which can be quite difficult for some people.
I see no reason to have more fees tagged onto my tuition regardless of quality, because chances are that money I put in will not be even be used to improve my quality of education. On top of that, I see no point in increasing costs to improve advising.
I have doubts over the fees' ability to improve the enrollment goals set out by the strategic plan. A central pillar of student retention, particularly underrepresented students, is to improve program relations and facilities; at this point, programmatic fees appear to only maintain survivability of programs, which should be a broader concern of the university that requires multiple avenues of funding, not just additional fees. Likewise, the additional high fees for arts programs discourages students to choose this institution, particularly if those programs are already struggling.
It costs too much.
A disadvantage might be that students in certain programs would have to pay higher fees because their programs require more money to run.
More charge means I have to pay more which of course nobody likes.
People may have to choose their program based on what they can afford instead of what they are truly interested in.
Increase in tuition as I am a science major.
Students already pay enough. Find another source of revenue besides the students pockets. Alumni give a large amount of money to UW. Start putting it to better use.

harder to pay tuition especially when all i take is science based classes and i have to take a lot of classes per semester
None
MORE MONEY OUT OF MY POCKET!!!
The students are already paying a large chunk of change to attend this University. The last students need is to have more money taken from them.
I would encourage committee members to carefully consider affordability across all sections of the student body.
College is already expensive enough and considering I work two jobs and have 16 credit hours and still am scraping by financially it sucks
Students have to pay more
Some people just might not be able to foot the bill.
Science and engineering students charged disproportionately
We'd have to pay a little more, but if the money is used appropriately I'm ok with that. Something has to change here.
it's confusing and such a hassle
Individuals will see it as just another additional charge.
Some students will view this as the University just trying to make more money from them.
I feel this would still unfairly distribute the (admittedly minor) burden. My COSC courses, for example need a computer lab and lots of other facilities that require extra maintenance, but my math ones don't. I personally am in both worlds, but know plenty in only one. As I understand the proposals, there would still be some bias among the groups. I also do not like the idea of a per credit hour fee, since that will cause me, who takes as many as possible credits a semester, to pay more than my peer, despite my non-usage (or near non-usage) of many facilities such as tutoring or the on-campus labs.
Not every class warrants the need for such program fees.
It is never easy for a student to need to think about spending more money. College is already an expensive commitment and increasing costs too much can turn prospective students away and cause current students to seek other opportunities.
College is already expensive and every cent adds up.
These fees will add up quickly to already increasing tuition fees, causing financial difficulty for many students. For a University that claims to be on the cheapest universities in the nation, they sure aren't going to keep that title for long.
I at this time will not be able to return in order to get my degree due to lack funds as it is now. This will only increase that decision.
I would feel like it is unnecessary to pay fees outside of the art department just because our tuition should be going towards the cost of the classes already.
Tuition is high enough already, and with increases nothing new is being offered to UWCC students.
A&S does not offer a lot of resources to their students in which we can see where our fee money is going. Besides the computing fee, I don't see where the fee money is being put to use. In all honesty, it is very frustrating to see money be thrown out the window for all these "fees" and not receive anything from it. At least with the computing fee, students understand that it pays for printing and such.
I do not want to pay extra money and not benefit at all from it.
Cost of living
I'm already paying 20k a year, take the extra \$60 from there
Charging students more money when they may not have it

Hurts the students who are fighting to pay for the chance to advance their lives to a successful future career.
From what I read, I have only ever taken one class that offered any sort of field trip and that was when we have had to meet in another room or building on campus for something. I do not know how the program fees helping with field trips is going to be helpful at all. Also, having to pay anywhere from \$9 - \$31 per credit hour is daunting, especially for the four credit hour classes that are required by the university. College is already expensive enough and to have the worry that if you would rather study math over English, you will pay over three times as much is not fair.
Extra and perhaps hidden fees associated with certain classes.
Low tuition is a huge reason why many students come to UW. If we raise these fees, I see this impacting not just in-state students but those that travel across the country to go to such a great university for an affordable price.
not being able to afford it...
The money may not always directly affect students.
I feel like per credit hour means that they are going to add up pretty quickly if you are taking 12 or more credits. The people who are paying the most are probably not going to be able to do things like field trips.
I already have a hard time paying for school and this could mean that i will not be able to afford it.
College already costs too much
Expensive for students with little to no scholarships, paying out of pocket.
The high fee on performing and visual arts is often hard for those people to pay, however the programs are extremely underfunded since they are "not as important as engineering and science". The main disadvantage is for the kids that can barely afford college and have come to Wyoming because it is cheap.
The increased cost of attendance may be difficult to meet.
Inefficiency in allocation and use
People will complain.
Students will not like paying more. Let us run some numbers. Say they have they an average full-time at 12 credit hours. At \$6 per credit hour that is an extra fee of \$72. and at the other end of \$32 per credit hour is an extra fee of \$384. Students will not find this extra costs in appreciation.
It will cause students in particular class types to pay more fees than other students.
Might make it more difficult for some students to afford tuition.
College is already expensive and there are plenty of opportunities on-campus currently; there are enough that I do not think that the cost of the benefits out weights the negative finical impact it can and will have on students.
The present student will pay the extra money for expansion but he/ she will not be able to get benefit from them by the time you'll build/ expand infrastructure since he/she will leave the college.
Additional strain on students.
Slightly inconvenient for those struggling to pay tuition.
It could possibly force students to seek out higher loans putting them further in debt upon graduation without a guarantee of getting a job in their chosen field.
it's per credit hour so that means that every 1 hour will increase my dues by that much.
i'm broke before them. and more broke after.

This would increase the cost making it difficult for some students who already barely afford attending. This also could create unhappy students who choose majors simply by the cost or have to switch due to the new fees instead of being able to follow their dreams.
The cashiers office would see fewer people.
increased financial strain on students
Often times, money is thrown at issues but only results in temporary improvement - real improvement comes from a change in students, not funds. So, it may not be beneficial to demand even more money from students.
Some students have the means to pay for the cheaper program fees, but not the more expensive ones.
Adding on more money that college students have to spend, and making their tuition unaffordable
It makes it seem like the college is trying to squeeze out as much money from students as possible.
It says that all courses that are not science or performing arts will have a fee to cover additional costs for field trips, I have not heard of many classes that participate in field trips at the universities expense and don't agree with that being the only explanation.
Is more expensive and thus harder to afford.
Are these added fees really going towards my program? Or are they being funneled into the athletic department....football program
You are having us pay more when you already require full-time students to pay over \$600 in fees per semester. You're literally ripping us off and there isn't a thing we can do to stop you so stop wasting your time writing surveys and start using it in a way that I would actually benefit in paying you for.
It is another way to jack up the price of education while hiring more senior administrators.
A way to be charged more money for a service I don't need or that I need but doesn't satisfy that need.
Students are already paying high amounts to obtain an education.
Potential increase in costs. Dropping a class would be more costly after paying for extra things like materials, field trips, etc.
College already is SO expensive. With everything together, books, and living, and tuition. It's becoming less and less reasonable to attend.
I'm not confident that the money will be handled in a way that benefits students.
Students simply don't like paying more money. Could have trouble being taken seriously.
Those of us within the sciences who have finished our math credits are still being forced to pay for the math assistance center and tutoring which we will not use and will not benefit us.
Increased costs for students leading to larger debt at graduation.
Raises the cost of attendance, which is already a lot of money (though not as much as most universities)
While I understand the need for these proposed fees, unless they completely replace all fees, such as the fee charged to graphic design students for the Adobe Create Suite, then it seems like these fees are an additional expense. Looking at the proposed fees for other college, I think that programs will become more un-affordable. This fee system, in a way, appears to burden certain majors with more expenses than other programs. I am not sure that a fee system like this will actually help UW reach the goals mentioned at the start of this survey.
It will cost a lot more and push students away from classes like art, and science if they aren't required to take them.
The disadvantage that I see is the student may need more loan money in order to cover these fees. I also see this being a way legislature will be able to continue to cut money from the university meaning the university has to find ways to make up the money cut from the budget.

A disadvantage would be a slight increase in the cost to attend college. This translates to an increased burden for students paying out of pocket, and a future increased burden for those accepting financial aid.
I think it's unfair that I, as an anthropology student, have to pay additional fees to help support students in other majors. I shouldn't have to pay for advising and student support, that's what my tuition pays for. I also shouldn't have to pay for new buildings that I won't get to use, materials for other students to use, etc. I'm a veteran, so the GI bill will pay for my fees regardless, but I would rethink getting my degree if I was paying for it myself.
I would have to pay more money
The professors need to take a hit before the students. We already are a lower educated state and this will make it more like that.
They penalize students for taking certain majors.
I'm not sure if the revenue goes to things I support.
Filter right back into football
it may generate complaints
Having an abrupt increase in fees puts current students, like myself, at a disadvantage because we would not be able to afford this increase in price. Making the fee per credit hour will cause some students to reduce their credit hour per semester and will not help with graduation rates. Having the fees gradually increase over a longer time period will help students adapt better.
In the long run, students are paying thousands already in order to attend, the University, this on top of books for the course that are already hundreds of dollars. Adding another fee on top of this, for "materials" and such seems excessive. Students are already going into debt, and \$9, might not seem like that much but it could be going towards feeding the student paying to take that class, which as mentioned before, is already being paid for in tuition prices.
If things aren't used, the money is going into a "pot" that isn't benefiting my education.
Some students don't need or want these resources so they are paying for something they will most likely not use.
People won't be able to afford those fees. It's annoying that you charge so much for just one class and then you feel the need to charge more? Why not just charge the students when they do field trips? There is no guarantee that each student will use those fees.
School becomes even more expensive.
Basically just the raising of costs for students. I know there's not really another option with budget cuts and all, but it is a bummer that those costs are funneled to us when many people struggle to afford school already.
Students may be unwilling to pay, or concerned that the fee will end up going to programs that we are unsupportive of, such as stadiums and whatnot.
That it charges per credit hour.
Cost students more money.
How will this change anything? As an academic institution, the proposed services should already be offered and supported with money from the university.
reducing the amount of students who are able to afford to go to college
More cost to students
they disproportionately impact people in the math/science/arts fields
I am strongly opposed to any program fees that increase costs to students above current levels. Would it be at all possible for this committee to tap into the kind of donor revenue that regularly gifts millions of dollars to new construction projects (Gateway Center, Football and Basketball stadium renovations, High Bay facility, etc.) and the athletic programs instead of looking to students and their families?

These fees should only be charged for classes that can utilize the fees to pay for equipment or free services that students can use in those classes. However, I feel that my classes so far have plenty of services and equipment and don't see it necessary to pay new fees.
no
I'm already so broke
The primary disadvantage that I see, is that this does not address the issues I have been experiencing at UW. Form my experience, I have not had too much of an issue with poor equipment, and no issue obtaining consumables. If these fees were going to obtain better teaching staff (particularly for the chemistry department), then I would be strongly in favor of them. I do not consider math to be my strong suit, but since coming to UW Staff in the math department has been outstanding. On the other hand, I do consider chemistry to be a strong area for me, but the poor staff in the chemistry department has caused me to struggle.
College is already really expensive.
Some programs will become too expensive and therefore less people will pursue that program
More money from the students.
Music Majors take several credits and classes per semester. A fee for each class and credit adds up to a great amount, putting several of the students into more debt.
It may discourage prospective freshman from attending
More difficult to afford education for people who already struggle to pay. Paying fees for services that are not used. Program fees are a poor solution to the broader issue of funding education.
I probably wont use them
The increase in cost of classes may deter people from attending the University of Wyoming.
I have to pay more money. I will probably not get a lot of use out of the new additions the fees will pay for.
Student retention would be a significant achievement
College is already very expensive, and 31\$ is equivalent to a trip to the grocery store
Expensive?
School is already unaffordable. Stop making it worse, spend the money wisely and on the students, not the president, new buildings, and sports.
Less accessible for poor students
none
IDK
could make some classes cost A LOT
As a student that pays for their education all out of pocket, I struggle already to pay for classes and raising the cost means it going to take me longer to get through school because I can't afford to take as many classes I need to take.
I see the disadvantage in high cost which would discourage some from entering into programs. i also see that if these fees are there the administration will slowly raise them over time.
None, just a few less dollars per semester. However, the University of Wyoming already has one of the most affordable tuition rates in the country. Anybody who complains about that should move somewhere else and see how lucky they truly are to be here.

Depending on which fee price per credit is chosen I would say an overarching disadvantage would be the fact that costs will be higher even with the substitution for the Computer lab fee.
People not being able to afford to go to school.
This will be very intense for science heavy majors
They take away from being able to take more classes in our desired major, art fees exceed hundreds of dollars and should be incorporated into our tuition costs.
That's a complicated question. The issue is that these proposed fees aren't anything new, they're just a retooling of elements in the current system. We already have academic fees students pay; assigning these fees new names and amounts doesn't address the underlying issues, of which the most dire is that education is increasingly seen as another thing to be monetized and the rising costs of higher education (probably all levels of education, really) associated with that mindset. So the fees themselves aren't the issue, I'm sure they can be implemented to work well within the system. But the fees can never address any issues with cost in the system itself, because a lot of those issues are structural both within the culture of higher education and, well, just generally across the US. So are the fees disadvantageous? Depends on how you want to look at it.
Less money for the school if not many people take advantage of it.
College is expensive enough as it is. With a fee increase, some students will not be able to afford to take the number of credits they need to stay on track for their degrees.
They could quickly add up
I don't see any, A&S has already lost the best professors it had for CJ and a bunch of majors just got shoved into the same department. If you didn't know the CJ students are very upset about this. Now, after we lose the best professors in CJ, you want to raise the cost to sit through classes which aren't actually preparing us for the careers we want with professors we can't stand and aren't half as good as the ones that left.
Lots of students choose UW because it is affordable, raising the cost with these fees makes one of the top highlight reasons for choosing UW less applicable.
It should be included in our tuition, we should not be penalized for what college we choose to attend by having to be charged fees. The university should work within their means, so there are no "hidden" fees.
I do not feel educated enough on the matter to give a response
For those who are paying out of pocket the cost could be too great for them to afford to further their education such as my self.
Same as above.
Not sure...
That money doesn't improve quality of learning, but instead buys nice things for a department.
Increased costs to make it less affordable.
It would be a huge disappointment if I paid extra and still received the same quality of service. There needs to be strict accountability in order for this to work.
People could be less likely to participate in certain degree programs, even if their skills would best be utilized there or that area is more in demand. But if something costs more for the institution, somebody who isn't going to utilize it shouldn't have to foot that bill. That would be socialist.
These fee hikes are a corruption of a colossally fucked up system that's supposed to make young people better able to seek the careers they want and better able to benefit society as members of the general public. Instead, it's a bottleneck for billions of dollars to go into the pockets of big corporations who shamelessly manipulate young citizens who can't possibly avoid this fucked up situation without sacrificing part or all of the futures they want for themselves. And these "fees" are nothing but a way for universities to make ends meet while they starve themselves to feed massive corporations with the funds that should be going to the schools, the students, and the faculty ONLY. Those in power should be ashamed, and those being hurt should be furious. I am.
MORE EXPENSIVE.

It will be a burden for students who find it hard to pay for classes already.
-
Some students can't afford. this means more dept and less attendance. which means less money.
It might be more expensive
Another way for the university to get money. I pay \$12000 a year in tuition.. shouldn't that be enough without having to pay for fees as well. I wouldn't have a problem paying for the fees if they were useful.
I believe that as long as the program fees are specific to each class (ie. drawing class should probably have less fees than ceramics class), then there are no disadvantages that I see.
Yet another thing that the students have to pay for. Not the University of Wyoming which already makes millions off its students.
Not seeing where my money is going (as in proof of my money being used for materials), having to pay these program fees separately from tuition, and also having to buy most of my materials even after paying these kinds of fees.
More money to spend.
Many people will see the increase of fees and not see the improvements that are reaped from such increasing of fees.
I think that people will automatically see the difference in payment, and start to panic. This could lead to rumors spreading and an overall dislike of the program fees without actually understanding what is going on.
it makes it where it's harder to get certain degrees, especially the better degrees involving math and science, which is bullshit. also makes the price alot higher for everyone who actually takes hard majors, this is bullshit.
It will generally increase tuition for those students
Could affect what students can afford the school.
Students unable to continue their educations.
Higher tuition making it harder for people who cant afford to go to college go to college.
You're already paying for the class and now you have to pay more.
I believe no matter what a student's program is education should not be cheap, moderate or expensive for anyone. Even if its a STEM major or Arts/humanities/Commerce it should be similar pattern for everyone.
They will discourage some studentsâ€”those with financial issuesâ€”from enrolling in certain programs, i.e. those with higher fees. Explicit differential fee schedules influence these kinds of decisions, especially among students paying their own way, or who have limited means.
I see that the disadvantage of the fees would be that not all classes need them. I feel like it is just so that students have to pay more.
There is no advantage to having fees involved in the class after my tuition has been paid for, if I'm paying upwards of \$600 to \$800 for a class I expect that into to include of my materials that I will be using for the class. Especially since I've been told that these fees go to in class material and then I get told that I have to buy my own materials such as safety glasses tape measure ruler ear protection paper. Which is fine I'd rather buy my own materials but don't put a fee on top of that when it doesn't go towards anything but the university putting more money in their bank account.

Students, like those in visual arts, have to pay these fees that "cover" materials. Within all of my classes in the visual arts department, students have to pay the material fees and then have to pay for every single material they use ( personal safety equipment, tools, supplies, ect). In art history courses, students have to pay materials fees and art history fees, but don't use any materials besides the texts students have to buy. These fees are not beneficial in any way besides taking more money from students to line the pockets of the higher ups at the University.
Fees are expensive.
Some students REALLY cannot afford any additional costs. We are already broke.
none
Not every class takes field trips or is provided with lab materials. For these classes, there is no need to have a fee that will cover nonexistent materials. I provide my own materials for all of my classes. If I am provided with something and happen to lose it, I am expected to pay an extra fee on top of all the other fees I already pay.
Heightened costs limit a student's ability to attend/live reasonably throughout their college career.
More fees.
We already pay tuition stop trying to bankrupt everyone.
Can hurt some students like myself who attend school off of federal aid and scholarships
Some kids may not be able to study what interests them if they cannot afford it
Certain fees will only DIRECTLY benefit students taking classes that actually utilize the funds for what they are intended. Each professor and the opportunities they provide are different.
less availability for students of a lower income
Program fees should be included in tuition. Seems simple to me.
I do not have a lot of money
The disadvantage is that students have to pay for them on top of tuition costs. This is a state sponsored university and those expenses surely could be covered by another means if valuable education is what this university truly wants to provide. There is plenty of wasteful spending I observe on this campus and fishing the money out of students who want to benefit their futures by obtaining a degree at this university is truly unacceptable in my books.
too expensive
It will cost more money and I could see how for some students the low cost of attendance is the reason they picked UW.
Not taking that many classes
Would increase tuition significantly
Just the fee per credit hour
More expenses
The raised fees add an additional financial burden on students.
I mean, college is already expensive and I'm not clear on how they compare to current fees and costs.
I know multiple people who will have to drop out to to increasing costs
Over-promising. I worry that the fees will not be adequate to cover the promised additions to the college.
having these fees implemented and having nothing change in the college

Yes, some people cannot afford it... don't put more stress on your students when they are already hard working kids. We come here because it is cheap don't give us a reason to leave.
I will have less money in an already tight budget.
Associated costs if they are high
Most expensive tuition/potentially less students
Wyoming promotes being affordable
Additional charges which do not help the affordability of the university
\$26 per credit hour doesn't sound like much but say one student is taking four classes that are three credit hours each. Just in the '\$26' fees, they are having to pay an extra \$312 per semester. Now say that there are 500 students doing that. That's a total of \$156,000. Yes, this money goes to aid and fund resources for the students but some of this goes to resources we don't even get to use.
Deters individuals from taking courses
I'm just unsure of the change.
It basically costs more per class to attend the university.
More money that you're taking
They can get really expensive and I don't always know where the fee is going directly.
Pushes students away from wanting to attend college.
With 15 credit hours, that would add up to \$390 per semester which could be a steep increase for students already struggling with tuition costs. Given Wyoming is one of the most inexpensive places to go to college.
I think that just about everyone who wants to be a TA/GA is if they qualify. They're still students and shouldn't expect to be paid at a real level. As someone who has studied abroad through the COB and UW, there absolutely does not need to be further support because it is astronomically cheap as it is.
There are some students who an extra \$312-\$468 is a really big deal. They are barely scraping by as it is, especially the ones that are trying to avoid debt. Fees like that are more than a month's rent in a lot of places, and could really affect some people.
A per unit fee means small classes struggle to raise funds, and large classes are encouraged. Large class sizes are the worst to get through though, and not advantageous to learning.
I'm taking twenty credits this semester so I don't have time to use these programs you are suggesting but I will still be charged an extra 520 dollars for programs I will not have the time to use.
I don't think the technology in the COB is bad or needs more improvement. The computer labs seem great to me.
Money being used in ways that are not effective in improving programs. As you could take it as a law of diminishing returns continually adding costs to try and expand programs will result in lower positive results
Many students struggle to pay the tuition they are being charged now, and another \$600+ per year may be a tipping point for students who are right on that threshold of affording their degree as it is now. And considering that we have a revenue issue that doesn't stem from student programs, but rather from a lack of students (recruitment and retention alike), I think that this fee might turn away enough students where the revenues produced will not be as much as the projections made by the committee.
Another fee that we have to pay, especially when the college of business is only available to us for certain hour of the day.
None , \$26 is very little compared to the cost of tuition.

We already pay enough and don't need to add extra fees.
N/A
It's a sneaky way for UW to charge students more.
For me, an increase of almost \$400 a semester
It can greatly increase the cost associated with attending UW, which a lot of people attend due to its low cost.
From my understanding, the fees would favor those with majors who aren't in stem. Those who take engineering or other scientific workshops/labs would have to pay more fees than those who take . This would mean that the burden of the fees would be placed on those who tend to work the hardest/ have the most difficult courses.
Transparency is really important so just make sure everyone know where the money is going.
This will not effect 100% of COB students, so it should not be a fee.
It would make it harder to estimate how much tuition and fees are going to cost each year and budgeting for future semesters.
Tuition being to expensive
the cost!
Some
You have conflicting information, I can't conclude at this time.
I am opposed to fees that penalize students taking online courses
Tuition is expensive enough as is, and I am not interested in paying for programs that I will not necessarily use.
It raises the cost of tuition and it doesn't benefit me. There are already massive cuts going on in programs that could help people after graduation, but yet the athletics isn't getting any cuts. look at the football coaches salary, outrageous.
Adds cost to attending
I see a disadvantage being more expensive education and less of an effect on the lives of students.
More expensive to attend school
It's an additional expense to already rising tuition costs
Having to spend more money every semester
26 doesn't seem like a lot, but if one wants to take upwards of 18 credits, then it gets pricey very quickly.
it is no longer advantageous for students to maximize the credits they take per semester, thus extending their entire college career
The additional cost can be a hardship on some people.
Many students chose to give to the University of Wyoming because its affordability. This may decrease enrollment popularity.
Student debt.
Impact affordability
I'm a non traditional student and don't take advantage of most "free" services on campus because I feel intimidated and unwelcome due to my age
The disadvantages are that if too many are imposed UW no longer holds the title as the "lowest cost/ highest quality" education.
I will be charged more which I do not like
Paying up to 390 dollars more for a 15 credit hour load is a fairly large jump to take all at once.
expenses.

I think people will complain and not see what the true value is of just \$26 more per credit hour.
We will be paying more but essentially not getting anything new out of the new fees in return.
It's a lot if you think of it being applied per credit hour
The additional costs
None
More \$
I think that I won't personally take full advantage of the advising that this money is going to because I have yet to require excessive assistance from advisers.
A \$26 dollar fee per credit hour can be fairly costly on top of all of the other expenses students already have to pay.
The cost could affect some students abilities to go to college. Also not having the fees all compiled into tuition gives a false impression of the costs
Money. The cost is ridiculous considering I think our advisors in the College of Business aren't helpful.
Higher prices
More students pissed off
If the resources receiving the fees are mismanaged or not very helpful then the money goes to waste
<ol style="list-style-type: none"> <li>1. Less resources will be allocated to degrees which require high capital but have low demand.</li> <li>2. Degree specific applicants (Like Engineering and Business students) may not choose Wyoming as their specific degree would be cheaper among our competitors. (Even though the average degree cost is cheaper than our competitors; those seeking degrees in more expensive programs may choose a cheaper school)</li> <li>3. Engineering and Business students may have greater access to resources while participating in courses outside of their college. This could great an unfair advantage within general courses.</li> </ol>
I have to pay more for things I don't use
A little high, might not use the services this fee plans to cover.
We will have to pay more
Paying more fees which don't seem to do anything. Paying more fees and watching faculty leave sends a conflicted message.
Excessive fees and disclaimers creates a confusing payment system
It costs money
yeah
why should students have to pay more for the resources that the university should already provide, is our tuition not enough? the university should already provide these resources without a fee
Not all student can afford the added charges, this may reduce enrollment.
I have to pay them...
Higher tuition.... Again

More expenses
People see fees and freak out.
It may cause students to not be able to afford tuition and fees at the University.
Some students may find it a waste since they will not use the services.
For those, like myself that are taking large credit loads, it is already difficult to afford college even with loans, especially since we cannot work us much because of the demands from our classes. A flat tuition rate would allow those who want to work harder and graduate faster to do much better.
Increases the already high cost of attending university
The affordability of attending. I'm already paying a great deal of money to come here and live in a shoebox and eat frozen food, and to get an education. Raising fees (even just for a college to replace their fees) is something that impacts students a great deal. I'm working 20 hours a week just to pay for next semester. I shouldn't have to worry about compromising my studies to work more to afford my studies in the first place. If anything, the university should look in to lowering fees in different places (such as wyo one card replacements, dining and residence halls, etc) instead of upping them. This is a wonderful place to go, but students are broke.
None
Having to pay more money.
Pushback from those not able to afford
Students might not take a program that are not needed even though they are interested in it.
Not helpful for students that do not need the programs offerings
I don't see how these fees will actually improve our advising and teaching methods from graduate students and part time faculty.
Not everyone benefits the same.
I will see no advantage from it because the money isn't going to anything that directly helps me.
Too expensive kids will drop out because they can't afford it
People respond negatively to fees and price increases. While the amount is not that much, implementing fees could see resistance.
The cost would go up a considerable amount for tuition.
Obviously the financial reasoning, potential lessening enrollment in this area.
The Johnson Career Center does nothing in my opinion and I do not need to dump more money into unused programs
I think the reopening of the Communications center is 100% unnecessary. COB students have just as much access to the OCC as every other student and we don't even use that. I highly doubt it would be of any benefit to anyone.
I disagree with paying \$6/hour to go to subsidize some other college's advising. Especially since the cob already has their own dedicated advising center.
Financial Burden for some
I think it could definitely affect some students who have tighter ability on financial spending. However, I think the college and university in general offer plenty of opportunities for financial assistance that students could take advantage of.
Yes it is more money.
It's added cost to something most people already can't afford

I don't understand the need for more part time employees for the College of Business. I would like to see why the costs are going to a communication class. I would understand it if we were able to have more flexibility like offering upper level classes throughout the summer but this doesn't affect that at all. I think that the affordability that UW provides right now is the most appealing part of UW.
Pricing more students out of the University of Wyoming.
People taking a lot of credit hours have the possibility of paying more than they would at a flat rate.
Just because a lot of business majors have well paying careers, it does not mean that it will be guaranteed. I do not see how the increase will benefit anywhere. The ticker-tape has not been on at all this semester and it is the middle of the semester.
This is just raising the price of going to school.
Grad students as teachers is a huge disadvantage. Grad students are the worst teachers and the fact that a fee that we pay is going to go to them is lame.
Some students, such as myself, are already stretching money just to attend. An extra amount, no matter how large or small, gives yet another subject to stress about constantly.
One small disadvantage might be the fact that some students in "high cost" departments may not need or use the additional support they are required to fund by attending that department.
Increased financial stress on all students. The current advising program in the college of business is a joke anyways and does not deserve higher revenues.
Potential funding of useful programs and services.
not many would understand the increase and why it would be needed.
more costs for students
Not all the money is being put toward that program
It costs more
cost me more money
It is applied to everyone and the distance students do not have the same access to these offerings. Therefore, a large contribution is being made for a very select few to have use.
Rising costs to students
They may discourage students from pursuing the most in demand STEM majors, which I suspect also have higher costs due to larger faculty salaries. The last thing we should be doing is discouraging students interested in these fields from pursuing what could be a very successful career.
More expensive and I feel we have enough resources for help (STEP the career centers)
Frustration for students and confusion as to where the fees are going
It negates the advantage of trying to graduate early (good for the college I guess). Cost of attendance would increase for me, and I'm already having a hard time staying afloat.
Higher cost.
There are something to do
Some students with less resources may be affected by any extra cost. The University of Wyoming is still a low cost option for most students even with fees.
I think because our traffic isn't that big and our school isn't as big as universities in Colorado, our job fair seems very limited in terms of employers and not too exciting in my opinion
Higher Costs

Fees generally appear wrongful to students, who probably feel that they are paying enough as it is.
Its just more money coming out of my wallet that I don't have to give.
I do not think they are necessary. The University of Wyoming is already cutting costs everywhere (i.e. the student health pharmacy, changing commencement), and tuition & fees are already steadily increasing every year. I do not think I need to pay more to improve programs, because the increased payments and cost-cutting measures the University is taking should cover be covering that. I do not use most of the resources in the College of Business already anyways, and improving them will not have much of an effect on me. Advising in the College of Business is awful, and I would not be excited to pay more money to them when they are zero help to me or any of the College of Business students. I would like to see some change before I cough up more money to the University, so that I know that my money is actually going to good use.
I don't really use any of the things the fee goes to, and I don't like paying for things I don't use.
School is too expensive as it is.
\$26 per credit hour adds up with student loans
\$26 in loans adds up
Costs more money, less people will want to come here
The cost of attending UW is already rising and adding more fees will make it even harder to attend.
Adding on extra expenses for students to worry about
none
JCC needs more support and where are other revenues/funds coming from to support the COB otherwise?? I'd prefer to see that before I would say I fully support this.
None
I already pay a student fee, a full time student fee and a 45 dollar college of education fee, I think this just adds to more fee where I hardly use what I am paying for.
It could be too costly to some families
This fee is going to increase my tuition costs by a large amount and as a student that works while going to school in order to pay my tuition this is worrisome. I also have already paid for LiveText and similar things so I am not sure this increase will actually help me.
I believe that it is good to spread the cost so that students can take 18+ credit hours without breaking their bank. Furthermore, if these are just additional fees to what is already being paid, it will cost students hundreds more each semester: something that I cannot afford.
Many students already struggle with being able to afford college, and this just makes it harder. I for one am trying to get through college debt free and when costs keep rising, it makes it more difficult to achieve my goal without working like crazy.
Some classes donâ€™t even use anything that need a fee so then we pay for nothing.
I think college is already really damn expensive and so when you raise tuition cost the more students will go into student loan debt and be having to paying that off in an extra year instead of investing in retirement.
Having to pay more money than we already do in order to attend school.
I already pay enough
The only program fee I have a problem with is money going towards LiveText. In my three years I have only opened the program twice.
Those who take a lot or even the normal amount of credit hours are not help.
\$26 times the average credit hours I take is \$416 total. That is more than half of my monthly rent, or all of my utilities for three months, or four months of car insurance, or four months of semi-healthy groceries, or two textbooks for a semester. I do not have \$400+ to spend just lying around.

If you are taking lots of classes then it is a disadvantage because it could be more expensive
Increased cost of attendance
With less money going in to the college professors may be cut, or programs, such as Modern Language education, which has already been cut.
Then again this could also seem a bit more expensive for just one class too.
I don't use a lot of the stuff that the program fees cover, so it seems a little wasteful to have ALL students paying for something that SOME students use.
&gt; They do not seem to help you out in the long run, I feel.
&gt; The more fees I have to pay, the less I want to be in college.
&gt; It all seems like a huge scripted gameplan to get more money.
&gt; If I didn't have to pay so many fees, I would most likely be able to afford college or just about afford college with the scholarships I have, but because of all of the 'extra' fees, I am now in debt thousands of dollars.
&gt; If the college would like to make me pay so many fees, then I would like a guarantee of getting a job after college.
Is there a fee for that too?
Programs may take advantage of this.
Its costly, especially when you multiply those figures per credit hour.
Some students don't use the resources these fees are intended for, with that being said, its unfair those students have to pay those fees.
I see a lot of students not completing their program because they can't afford the extra fees. If they don't drop out they might transfer to another school that is cheaper.
To be frank- we are a major with a limited earning potential. Some classes are 6 credits, so this semester as a junior in 8 credits I'd pay about 200 extra dollars. That is more than actual fees. In addition, elementary ed majors would get to pay a ridiculous amount that is not fair.
Other students I know will notably feel this effect, especially the out of state students who add to our diverse ideological body
Can't think of any right now
Not all options might be necessary. I don't feel like I should have to pay for something I don't use.
This makes tuition go up
That's money out of my pocket. Which as a college student, is very limited anyway.
College tuition increases
There maybe a higher fee charged for some that take a large case load. It can cause some classes to not be taken possibly.
Couple hundred dollar increase in tuition that I already can't afford
Paying for more than actually needed
Have to pay money
Expenses
Discourages multiple credit hours
Out of state students are already paying so much to come to this school, and adding more fees for them it makes it rough.
So if \$22 is going toward a LiveText purpose, I believe I paid somewhere around \$100 one time to use LiveText the four years I have attended UW. It would take five credits to meet that requirement.
If that's the case then I don't see the benefit to doing that.
Possibly could make things slightly more expensive but I haven't done the math.

more cost, however, it is only a negligible amount
I think it could cause trouble with cost for some students.
Since I am unaware of the advantages to these, I think that they are not necessary.
Many, see advantages.
Increasing costs when the money will be wasted while you continue to lay off professors and raise tuition.
An additional fee added per credit hour to a student could prevent them from being able to continue their education at UW. An advising fee would be reasonable, but with that I should be able to book more than a 30 minute section with my advisor.
The solution is not always to just throw money at it. If revenue goes up and the way that revenue is implemented remains the same nothing will change. It will just become even more of a money hole than it already is. Where is the money going? Is the program getting reorganized. I hope so. One of the major draws to the University of Wyoming is its affordable tuition, if that goes away I do not see a lot of prospective teachers choosing Wyoming over other options.
See above.
UW student leads to broke student. Broke student leads to sad student. Sad student leads to depressed student. Depressed student leads to dead student. Dead student leads to bad press.
I'm currently in 18 credit hours, so having to pay an additional \$504 on top of the fees I already pay is significant. During methods and residency, there are a lot of hidden fees like the fee for applying for a subbing permit through PTSB, purchasing a the required LiveText account, paying for the PRAXIS test.
Higher costs to cover things I don't necessarily need, or use.
I don't see any super big disadvantages to the programs fees that will affect much of anything other than tuition.
higher costs
Students will still be paying for services they may not know exist or are accessible to them.
This may cause some students to be unable to pay for their classes, and that previous bit about teachers having a higher incentive to better teach does not always work. No offence, but some teachers in the college of education are not engaged in teaching their students. Preoccupied in furthering their own educations, some professors at UW are not really teaching their students.
It would cost more to go to school, and I am barely making it by as is.
It will start to add up money because paying that much money for one credit hour to cover those things will be a lot more money than paying for live text straight up. And six dollars foe advising seems ridiculous because most of us only see our advisors once or twice a semester. That's a lot of money per credit hour that some won't be able to afford.
All the Step tutoring and supplemental instruction isn't available for UWC students so I would be paying for these programs to be expanded even though I have no access to them.
You trying to get more money out of us for no reason.
Another fee means's less money for other uses. In my case less money for food, bills, and other living expenses.
Unused resources that we're paying for but not using
I feel like the disadvantages for the program fees would be that I would have more of an economic hardship by paying this much more per credit, than it would to pay for my own livetext and background check.
I have already paid for my livetext subscription, so I don't understand why I would be required to pay fees for it. I am not sure what fees it would be replacing.

This could be a hinderance in respect to one's ability to afford the costs of UW
I am paying for things that I am already paying for, i.e. I pay for my background check, and my fees also pay for my background check.
Would other people who are not education majors be able to use the facilities that only education majors would pay for per credit hour? I also do not know the grad scheme of the budget, but it seems as though this rate per credit hour adds up to more than what the student would be paying if they just paid the flat rate for things like background checks and Live Text. Also not all take advantage of what is offered to them, so why should all have to pay for something if they are not all going to use it?
However, many people could be more greatly affected by the cost
The stress this fee could cause for students, 28 per credit hour is going to be impactful for many paying for school themselves
I am already paying a ton to attend UW as a non-resident and so if I have to pay the fees I will. But I'm sure there are other ways to cover these costs without adding more to tuition.
It does increase the cost by a few hundred dollars and that can be difficult because many students already struggle to pay the current fee's.
I am in the college of education, and am in school to become a teacher. I am taking out a substantial amount of loans to attend college, knowing that I will not become rich in the career I pursue. College itself is expensive, but in education we also need to pay for Livetext, EdTPA, sub permits, fingerptints, Praxis if we plan on teaching in a different state, licensure for Wyoming, and licensing in other states as well. This adds up. I think we are required to pay for so much outside of our bachelor program we should not have other additional fees added to our program.
I make very little money, every dollar counts. This semester I have discovered that the money spent on recourses and clubs at the school affect me very little.
Higher student loans
If fees get too high, there isn't a way for an 18 year or a student in their 20 can afford to attend. Students will spend more time working than studying and cannot obtain the education they so desire.
Yes. I don't feel like I see my money in action and it just disappears.
more expensive for those who already have trouble affording college
Cost increase
I am not interested in paying any more for college.
might be stressful
While some of the expenses are covered through the fees, it seems to me that students would be paying more money in fees than they would by buying LiveText at a one-time cost. Same goes with background check costs.
Our student costs should already cover our use of general advising and use of utilities throughout campus; I do not see a need to increase this by six dollars. By paying upfront and 'out of pocket,' the full amount of fees such as background checks and LiveText, the cost is covered completely and decisively determines who wants to stay in the college and who doesn't. If a student wants to remain in the college of education, then the student will pay the costs upfront, proving their desire to complete their degree of education. Program fees detract a student's investment of education, because they do not require the student to pay upfront. Rather the cost is broken apart, which can make a student be more prone to leave a course of study because the student does not feel the full weight of their investment in their education.
It doesn't seem to really be changing the affordability of attending UW.
Additional costs to an educate that is already expensive.
Not sure

No one likes to pay more fees, because hardly any students know what they're for, what they're replacing, and where their money actually goes.
I have to pay more!
more money, nothing comes of it
Students enrolled in 18 credit hours would pay over 500\$. They would be penalized for taking more credits and end up paying the fees for students enrolled part time, which would not be fair to them.
It could impact low income students disproportionately.
Money seems to be a big contender on whether someone goes to school or not.
thinking that you can afford more than you can
Students have to pay more for very little benefit. 28 dollars per credit is too much for services we essentially already have.
I would still have to pay for other fees such as background checks for a substitute permit.
Its a lot of money each year. You guys already take so much money from us its not even surprising you're wanting more.
Increased student costs when difficulty to pay is already an issue.
Costly for students, with little to no purpose.
The justification for increasing the fees to \$28 are rather ambiguous.
Obviously, no one wants to pay more money, and have more debt.
I have spent a great amount of money throughout college. While UW is more affordable compared to other universities, I find it appalling that my last semester will be by far the most expensive, even after the removal of the student fee that allows access to games and other campus activities.
I have already paid for my own Livetext account, so paying these program fees would cause me to have to put more money into it. Also, \$34 per semester is a small fee to cover technology compared to \$28 per credit (which would \$420 per semester if I have 15 credits).
I am also involved in two different colleges: Education for my major and Modern and Classical Languages for my minor (Spanish). I am wondering if paying program fees for each college would increase my current expenses.
It frustrates me that they tack so many fees onto my tuition, there are a lot of fees that are for services that I never use. It would be nice to have the option to not pay for the use of these service until I decide to use them.
Student teaching is a scam.
Paying more
Could turn into a lot of money. But seems like a good idea to me.
Increased cost
It cost more to apply for classes making students less likely to take large amounts of credit hours
Nickeling and dimeing to make up for lower tuition.
It gets a bit costly on college kids
It possibly costing for a year
Tuition for most people is hard enough to pay for already, and a fee per credit hour puts that much more financial strain on students and their families. Students should be stressed about school work, not how to afford it.
I feel that we all we ever see is an increase in fees but never any kind of change to come from it, yet alone any benefit from raising fees.

School is already very expensive and difficult to access for some students, more fees is just going to make that problem worse.
Not everyone can necessarily afford an extra \$1000 per semester in fees, especially with rising tuition costs.
Over the course of the 12-15 credit hours, this fee will add up to about \$350-\$450 per year. That is substantial.
It costs decently a lot more.
Increased costs for low income and out of state students.
Students do not generally like raises in their costs for schooling.
People that have to pay for college possible dropping out.
Almost none, advising is currently worthless and throwing money at it will make it better how?
The 6\$ fee sounds vague as if you are using it to pay faculty a.k.a the advisors, I want that money going towards the labs.
You have to pay that fee on top of admissions already paid.
None - itâ€™s a very small increase overall.
It might make it more difficult for students to afgord higher education.
It has the side effect of using cost as a disincentive for students to go into technical stem majors and art majors, as those programs have higher equipment costs than business and liberal arts degrees.
I came here for the cost, and raising that discourages students like me from coming here.
The fees proposed seem like they should be flat rates. The purposes seem to not really depend on the number of credits the student has. Maybe we should stop paying for the TBP tutoring that nobody used and use those fees toward these services that have been determined necessary, for instance.
Paying more money for students that may already be struggling
I am poor, and the college of engineering is already one of the most expensive colleges to attend on campus (if not THE most expensive) and it seems like every year I have attended there is some new fee being added to my attending here but my financial aid remains the same.
Increase in my tuition. I'm going to go broke.
Too expensive
Students like myself with student loans might see it as an issue.
Classes are less affordable and therefore less accessible for everyone. More money for labs and advising does not reconcile the fact that there are not enough professors for the classes we need
Will cost more to follow the curriculum set in place by the college
Higher fees for certain colleges may discourage students from pursuing a certain degree.
Implementing it now, the seniors are burdened with increased cost but don't see the benefits of the new equipment.
Seniors will have a larger financial load
I foresee the extra revenue being poorly budgeted and used resulting in nearly no change in the program yet with the additional fees.
the " building fund" to allow for new construction is separate capital than that of what is used for faculty raises, lower tuition, etc. is a fabricated lie. it is all the same. the new proposed fees will discourage new students, as well as, deter current students from staying.
Discouragement of taking expensive courses

I am already overextended financially and any increase in fees is hard especially with the already increased fees due to many very costly textbooks needed for engineering.
There are no disadvantages of a small program fee. If the fees grew to over \$50 per credit hour then students would need to sacrifice their quality of living to accommodate for the higher fees.
A lot of what my fees are going toward (the new engineering building) I won't even get to use.
The janitors and stuff get paid regardless so I don't think cleanliness will change. Also, the advisors won't get any better because of it.
we just got fess added last year, its ridiculous to add another fee the following year
It can be discouraging to see extra fees added on to my expenses, especially if I don't seen them going towards actual change.
Creates higher financial burden for higher level students.
Being an engineering, it is a lot more money.
increased debt
overpaying faculty
I'm already paying so much money to the university. Why do they need more? I also don't feel like my money has done anything so far.
This seems like it will greatly impact student debt upon leaving college (in a negative way) mine included. It also will negatively impact student financial status and increase financial burden on students. This may cause students to work more hours in their respective jobs and has the potential to reduce grades and material retention as a result.
Money doesn't grow on trees
I would rather the entire fee go to advising.
The university is making difficulty for out-state students to continue here
We are already paying for college
I'm already paying so much. Why do you need more of my money? Be more efficient with what I'm giving you already.
If you are not taking any classes that uses a program on a school computer this is an unnecessary expense.
Some students even motivated ones might not have the money.
For an engineer, at \$31 a credit hour, that's around \$500 more per semester. While that seems minimal compared to the overall cost, that's enough to make it hard for students like me that pay for college by myself. All the money I make in the summer and scholarships all go to my education and living away from home, an extra \$1000 per year is steep and would force me into debt and student loans. I dislike the idea of going into debt, especially when part of the reason I go to this University is because it is affordable.
I will not get any of the benefits of these fees and I already feel there is a good amount of resources available to us
Lots of international students come from severe economical issue. Increases like these prevent lots of students to pursue education, both international and out-of-state.
For the kids who are trying to make it without debt it could be more difficult, but at less than \$600 per semester (18 credit hours) it shouldn't be prohibitive
People who are having a hard time will not be able to get there degree.
A little more money, but definitely worth it.
For a full time student (12hrs - 15hrs), the 31\$ per credit hour increase could add anywhere between 372\$, and 465\$ per semester. Since this would replace the current 100\$ computing fee the damages are saved some. Ultimately this means an approximate 30% increase from the current ~113 that is charged. This will drive off some attendance, and overall lower the income for the college.
A waste of money. How about you focus on getting teachers better first! Hire better teachers then worry about these secondary matters.

I don't readily see where that money goes.
Makes it more difficult to afford, especially for students who don't have many scho
College is already outrageously expensive and i barely have money to buy food as it is.
Same
Waste of money
Heightened cost
More money from students who may not be able to afford it.
Recently, there have been program fees in CEAS that have increased while things like refund for the FE and computer printing allowances (just as examples) have decreased.
A lot of students, including myself, come to the University of Wyoming for an amazing education that matches that of a much more well known and prestigious school for an affordable rate and a smaller community. Although to the faculty and board it may not seem like a great increase that will add thousands of dollars to tuition over the course of our college careers and many of us cannot afford that. I think it will force current students into harsh situations and deter prospective students from attending our school.
Money being spend on old hardware or inefficiently.
Huge costs to students, if a student barely goes full time, that's an extra \$372 per semester. To some not a big deal, to others, such as myself, a huge deal.
Having to pay extra money
The program fee proposal results in a 25% increase in the total cost to attend University of Wyoming for an engineering student. This defeats leadership's plan to raise more money because the money gained from charging us students more will be LOST when many of us either transfer to different universities or stop attending because we can't afford the jump increase. I predict a NET loss of income for the university from us students either quitting school or transferring to better institutions at the proposed rate. My question is how do you justify a jump proposal when the current inflation rate is 2.2%? Thus, the proposal is asking for an increase that is MORE than 10 times the current rate of inflation!
Colleges are like the government - is there never a point at which they could make do with less?
I don't think that the fee per credit is necessary since I already pay tuition that included per credit price.
Money can potentially be an issue
Poor college students whom are already struggling to pay for college will have a tougher time affording to attend college.
They make school more expensive than it already is, which sucks.
People may be less able to afford them, including friends I know would struggle more.
The college of engineering already imposes fees beyond those needed for tuition, books, etc.
I see no advantages in charging students more than they are already. It's going to drive down retention rates and have people chose elsewhere for going to school.
forces students to leave school if it's not feasible to pay fee increases
These fees are not distributed evenly throughout the university. I find that very unfair. I have also heard that many of my friends will not be able to attend the college if these fees are Instituted.
The money will just disappear into the funds that UW controls and it will go to things its not intended for.
Less money for students, more expensive
Less money I have, more I have to pay.
Higher tuition rates

when there's a lot of different fees students have to pay, they add up quickly and can add an extra \$1000 to the cost of college just from all the different fees
I think the whole plan is a disadvantage. The programs fees won't fund anything that will contribute to our learning. Instead, it will go to athletics and funding research projects that are ran by professors who don't actually teach.
So if you really wanted to get special advisors or make advancements why couldn't they be done when the economy was booming? It just seems like an excuse to dip in pockets even more. What is the other part of my tuition going towards that it can't cover the proposed things? Also the university doesn't have a rep for being transparent. If a specific list of how the money isn't proposed to be spent and then a follow up of how it actually was spent is given I may support it.
Stop adding fees over tuition.
I know its only \$6 but my advising sucks. I do not understand why I have money going towards "advising" when it is a waste of time. Do away with the advising process unless actually need guidance. My adviser doesn't even know what is going on so I end up going to someone else instead which is ridiculous.
Possibility of unnecessary spending. The increased strain put on the student.
Obviously, higher cost to students. Just make absolutely sure all the new revenue is going to the correct spot, and not getting lost somewhere in the bureaucracy.
Expense
Will cost families more money to attend the university.
The cost mainly.
These funds could be misused for other things that don't help out students.
None
The cost of classes will go up and many people like the value. I personally do not see this changing the value as it isn't a drastic increase of thousands of dollars per semester.
Its very cost prohibitive to a system that is already based on paying per credit hour. I feel that there should be a flat rate at 12+ credits. Why should I pay more money when there are barely classes offered in my major that I need to graduate. I have to stay an extra semester because a required class is only offered once a year.
I don't know how I feel about the school-wide counselors that the base \$6 fee would be supporting. I am interested in knowing how this would change advising in the CEAS, but I don't think that it will be a smooth transition and I do not want to be the person who gets screwed over by a big change again.
ACCOUNTABILITY AND TRANSPARENCY!!!!!!!!!!!!!!
Ever increasing cost of attendance.
Sometimes you dont get what you pay for and the administration falls short of their promises
For a full time student that is an addition of \$372 for the least that the student can do. If this is not covered by scholarships, this will heavy effect my ability to afford college. For some that are more tight in this respect, this can force them to spend money that they thought they would not have to pay, which would most likely have been budgeted our to other aspects of the student's life. In the end it is paying extra money that people thought they would not have to, and that is never something a person would want to do.
Paying extra money just to graduate with a certain degree
You are charging me for things that have not worked well since I have been a freshman.
Cost , while that does affect some people it can help everyone's education
program fees that are so little in the larger scope of college are insignificant, whereas if they were better financially supported, students would take and interest
I don't think money towards advising is necessary most advisors know nothing about the students that come in. They look at your file for 2 seconds before you come in. Then just try to push you through and take classes you may not be ready for.

Higher fees.
It could impact students who are on financial aid and already cannot afford many fees to be unable to attend. It is also an undue financial burden on students who already pay a tuition for education so that the college can spend money on things not directly related to student success. Just raise tuition.
Makes college slightly less affordable for people
I understand the need, but this would raise tuition by almost 400 dollars for a full time student, let alone if you go beyond those required hours. As long as FAFSA will cover the difference it won't be a major issue, but it is inconvenient.
As an engineer, I know that I will have to pay more per credit hour, which increases my overall bill here.
Lost of a large portion of the student body because many students come here for the low tuition.
Expensive, couldn't afford
My overall fees will be higher
Some colleges program fees are high and may persuade students away from pursuing a major that could greatly impact the world such as health or engineering.
I don't perceive that I will be around long enough to see the fee implementation to benefit me.
always adding cost to our life..never ending bills its enough
Price of school becoming too high
The University wastes an incredible amount of money, would like to see some practical savings before kneejerk fees are added to the pile
I think this is a steep hike in tuition fees. A 10% increase in fees seems high, especially when I was short on funding this semester.
it is more costly for me to attend UW.
More money out of the pocket of students.
$31 * 12 = 372$ is a substantial increase to my tuition cost.
They may make it harder for students to afford classes
So many students dropping out.
Increased price for attending the University.
makes it more attractive to take fewer credit hours at the university.
More people will take online courses, dont think the university will come out with more money
I do not agree with the continued building of new labs and facilities. I would like to see the current physical and biological science buildings renovated as well as the engineering building. I understand that it is easier to get funding for large projects and cheaper to built new buildings rather than renovate old ones, but the university campus is simply expanding around the older buildings and moving classes away from the buildings around prexis pasture. In the long run this creates more maintenance on more buildings instead of addressing current problems. I believe that the university needs to remodel all of the old buildings and bring classes back into the original buildings before the coal money decreases and the current architecture becomes unmanageable.
I rarely use the new "proposed" services the fee increases claim to cover - i.e. career readiness, student retention, etc.
The University of Wyoming is a great place to learn, but students, especially from out of state, do not move to Wyoming for an education alone. Often, price places a central roll. By introducing additional fees, some students will decide it is cheaper to attend a university in their home state.
advising is semi-useless to me as I have done my own for the duration of my education
Cost

The high expense.
This could possibly affect affordability for other students however it is not a large amount and UW is already inexpensive compared to other universities.
Might encourage people to register for less classes.
At least as a freshmen, it is kind of hard when you have one bad exam and it could affect the grade in a class.
The up in the price isn't ideal and I'm worried that the funds will go to things that won't benefit the students.
Some students can't afford that extra fee
It may discourage potential students who would prefer to study in one of the more expensive programs.
The affordability, money has been tight so far.
They are added costs
Could be trouble if you drop out of a class?
It does raise the cost of classes a little bit, but replacing the technology fee for engineering students is a good way around that.
People will be less inclined to take more credits per semester and graduate on time.
it costs a lot per credit.
For people like me who are not in any engineering classes as of right now still have to pay the fees which makes no sense.
Greater cost to me and fellow students
excess cost
Those taking more credit hours are paying way more and may be discouraged from taking programs with high credits
More money
College is already already so expensive
I don't see how you can discriminate against one college and charge them more a credit than another college. Either have to charge each college the same amount or nothing at all
too much money
So people may feel as though there is no advantage and want to attend somewhere that doesn't single out a certain college for higher tuition.
Monitoring of spending. While the amount is not a lot for a single student across the college of engineering that is a lot of money as a whole. Money that should be more closely monitored and have a better more specific place of application. Currently I believe the idea is to vague and under managed students would like to see the money change. Much as we have seen with the STEM building and building of another engineering building. Other areas could also benefit other than those listed, I think students opinions should be looked at more as well.
It's coming out of my bank account.
The fees include payment for things that may not be applicable to the student. For example: A student may not be taking any lab classes, but they are still paying for lab maintenance/improvement with the program fees.
Increased cost an an already expensive endeavor
Longer to pay off loans
I see disadvantages in sections being offered in certain areas. And a more demanding cost for classes

<p>Many college students are barely scraping by as is. They need all they can get.</p>
<p>Students do not know how these fees are used.</p>
<p>Students want to know that the fees will be used to make the University more stable for them. The new developments in engineering labs &amp; the new engineering building, for example, aren't really for the undergrads, though, so undergrads are less willing to support this.</p>
<p>Yes, these fees have yet to help me out in anyway other than seeing the amount of debt accrued during my college career for a subpar education that doesn't teach anything meaningful to real world jobs.</p>
<p>Based on our current financial situation, I do not see any disadvantages for increased program fees</p>
<p>Cheap schooling is what draws people to UW, if prices keep going up we may end up missing out on potential students.</p>
<p>The added cost might deter students from majoring in engineering or attending the University of Wyoming in general. Students might also avoid taking many credits to lower their tuition.</p>
<p>If you take more courses you have to pay more money for college</p>
<p>They will increase my expenses, and I will graduate before the money actually starts to go to something to benefit me.</p>
<p>It's more expensive for the students</p>
<p>Those without a budget system as steady as my own may not afford it</p>
<p>The University is continually charging students more while the education gets to be worse and worse. The \$6 fee is supposedly for advising fees, etc. however, my advisor personally doesn't deserve a cent since he refuses to give any advice at all. In this past year, our tuition went up, and less of my classes are being offered, so much so that I have to stay an additional semester because the class that I need is only being offered every 3 or so semesters. I understand that the University needs money, however I see where the money goes, and it doesn't go into bettering our classes. This additional fee does not affect my ability to go to school, but the reason this University gets the students that it does is because out of state tuition is less than in state for a lot of states; but as that gap begins to close, we will get less and less students, and the few students we do have will be charged even more. I am all for paying an additional charge as long as it goes towards my education, but when it goes towards other useless upgrades around the University, that's where people get frustrated.</p>
<p>Students have to pay more.</p>
<p>That's an extra \$372 dollars minimum for a full time student.</p>
<p>Most people I speak with cite affordability as their primary reason for attending CEAS at UWYO. The more the cost goes up, the fewer people will attend.</p>
<p>nothing</p>
<p>I want to improve and support the engineering dept, but that fee represents a significant increase in the tuition I would pay per semester. My tuition for this semester would go from \$1677 to \$2080. I know it is still relatively inexpensive, but it would strain my finances.</p>
<p>Won't be able to afford tuition with the amount of federal aid I receive and I make absolutely no money, at the bottom tier of students. You're going to lose way more students than gain revenue because I cannot afford to live off of loans currently. The engineering lab has been a joke being maintained and you're losing some of your best professors. Put more money into staff than building new buildings because one of my teachers is teaching three classes and has been forced to give multiple choice ENGINEERING exams without partial credit. That's asinine, and it's because you can't keep people staffed and students are mad. Therefore more students will fail in these classes and be forced to take it again when others in the past never had to deal with this issue before this semester.</p>
<p>I can't see the proposed fees fixing everything they want to fix, and see them increasing exponentially.</p>

The disadvantages of the program fees is that it makes college more expensive to attend, and many students may not understand why the fee exists.
They can be a barrier to entry for some people.
I'm not a fan of common advisers I don't think--though I'm not sure 100% of what they would do to be honest. If they're advising on careers, then barf--I want someone who's actually worked in the industry to talk to--or at least an adviser who is willing to connect me with those people and help me in applying for internships. Someone who, of course, has experience in the field--and not just helping with classes. I like my professor advisers--they're excellent and it helps to break down a little of the barrier between professor and student.
There aren't too many I really don't see and disadvantage at the moment.
Some student may not be able to afford the new department fees and may want to change the department due to the increase in credit hour wages.
Added pressure on working outside of school and study time. increasing existing fatigue
Students have to spend more
The fees may not end up benefiting the program, or are larger than necessary
Obviously a higher cost
I may not utilize the benefits or I may graduate before I have a chance to utilize the benefits.
It cost more money, it all depends on value. What am I getting out of it. If they provided good enough service then it is worth it. It also depends on if the current status will stay the same with no increased cost, because things seem to be working ok to me.
Many students are not financially stable.
Not a ton, when compared to the cost of tuition the proposed fees seem like a small amount, so I don't have much of an opinion if there is not much of an impact on my schooling.
The main issue for some people is that they can't afford to have very many credits.
How necessary is it?
\$600 a semester is a hefty little addition to tuition
Not Sure.
Obviously it is a cost increase
There is a disparity between time commitments and credit hours for some courses.
Unjust hike in tuition cost because I'm taking more credit hours to try and graduate.
More money
This will not solve the problems with funding. The problem originates from poorly managed departments. No matter how much money the University increases fees by the department heads will find a way to spend it and get in financial troubles again.
N/A
Financial burden on me, the student. I'm not convinced that centralizing advising is a great idea.
Don't know if any of the advantages actually come through.
Extremely expensive especially since I'm an international student

Increasing tuition is hard for people who have to pay for it themselves. One of the biggest reasons people come here is because it is more affordable than the other schools.
I pay more money to the school.
Program fees drive up costs. I came to the university of Wyoming because of how cheap instate tuition is.
I think that it might drive students away from the College of Engineering who have a financial problem and push them to a major that has less of a program fee. This in turn would create less money for the College of Engineering. For me, this would mean almost an extra thousand dollars per semester, which to me is a lot of money.
Some students struggle to pay for college now, so an increase in the cost to attend UW would make it even harder and we might lose some students because of that.
The fees can limit how many credits a student can enroll in per semester or even prevent students from considering that degree path due to expense.
None, they should be added as tuition to keep transparency
While I am generally supportive of the program fees as they are proposed in the 10-20-17 draft, I would like to see a more precise breakdown of where funds are going. For example, in Table 3 of the report, \$72,000 will be added to the engineering enrichment fund. What exactly is an engineering enrichment fund? \$348,000 for instructional lab maintenance, but which labs will be updated? Are my funds going to my department within CEAS, or will they cover the cost of equipment I will never use, making the increased fees something I may not directly benefit from?
Increasing cost of attendance is always a thorny issue. It seems like I and many others would benefit little from the proposed fee increase.
Discouraging incoming students from applying to the University of Wyoming.
The university will raise cost and lose its competitive advantage with other universities across the country. Students will lose confidence in the universities credibility and management.
It discourages people from retaking challenging and costly classes based upon the cost of the program rather than their desire to learn.
The inability to appropriately define where funding goes. I think advisors should be held accountable to some level of training and engagement. I've been through 3 already.
They don't separate computer science and engineering although they don't use the same resources.
Potentially more money we will have to pay.
Costs more money to get the same degree
Reduced recruiting and retention of students
The \$6 fee does not seem necessary. Every professor in the college of engineering doubles as an advisor. I don't see the need to employ full time advisors when in reality most students utilize advising maybe three days out of the fall and spring semester together. So if each teacher doubled as an advisor it would save money and also replace the need for the fee. Also the \$35 fee for engineering students seems unfair because I doubt specific departments will have the ability to decide what to do with the revenue generated from their respective students. If the engineering fee is also higher than other colleges that seems unfair to engineering students. It's almost like they are being punished for choosing engineering, and not just engineering students utilize the facilities offered by the college of engineering. If there is a fee it should be a standard fee applied to all students of all colleges. One of the great aspects of the University of Wyoming is offering low cost quality education to Wyoming residents, that then improves Wyoming as a whole because quality graduates are entering the workforce. These fees seem like the start to higher the tuition cost, year after year, while doing little to improve the University. Eventually this route of increasing fees would just lead to increased tuition cost and making the University of Wyoming the typical university, where you get a quality education, but one that will take you 20 years to pay off. This would also deter Wyoming students that want to pursue higher education from staying in Wyoming, and if they leave they have a higher chance of not coming back to the workforce in Wyoming, which would then reflect poorly on the state and college. Wrote this on my phone, sorry the grammar isn't the greatest.
It's more money that students have to spend on top of the already ludicrous amount college already costs.

None really.
Some people may not be able to afford it, kind of a steep price point
Not every class has a lab, so it doesn't make a lot of sense to have a lab fee attached to nonlab classes
N/A
I feel that program fees should be the same across the board.
Most likely raises the cost of already intense programs.
It can add up pretty quickly and become hard to pay for.
Still don't totally understand what the fees are actually going to. We have two undergrad advisors, if another is added that would be worth the money but they haven't announced that. It could cost me a lot on top of what I'm already paying, and I don't get that much help from my advisor already.
Not sure what would really change with the extra fee except for paying for our school's new dean.
I come prepared for advising and haven't received the greatest help from my advisor.
I may not benefit from the funding
More need for financial aid, more monetary stress on students, no immediate benefits to the initial years of fees
Disadvantages would be some students will not be able to pay for the additional costs due to financial reasons.
Aren't the proposed services things we already have access to?
Some students may not be able to afford this increase.
Adding additional cost to an already increasing cost. It will add extra cost for students that I don't see as necessary seeing all the other spending going around on campus. As a student who pays for college all himself adding extra fees makes it that much more of a challenge each and every year to go with the growing tuition cost.
Each new year seems to have a bigger price tag attached.
Higher tuition
I feel like this is almost a tax on education. There are better ways to raise money
It is more costs on the students. We do not want to pay more money than we already do. The price of college is stiff enough, so adding more fees isn't something we students really enjoy.
I am already taking out 10 to 15 thousand a year in loans to be here, it is so hard for me to support anything that will raise my costs here.
Additional cost to those who have their lives figured out
prices going up, affordability going down; handicap if a student wants to take more credits
We are already paying tuition
The program fees I pay will not positively effect me because I graduate soon. The Haub School is small, so we don't need more advisers. Training the ones we have now to be more effective in career prep would be more useful. There are few scholarships offered by the Haub School, so there is no way to offset the cost of current fees let alone higher fees.
I am double majoring and taking lots of science based classes, so I will have to pay quite a bit more.
they add up
Some students might not be able to afford it and it will make them have to choose a different pathway.
The cost for all the classes we have to take which is a lot

Students may not be able to afford. I have a hard time believing that the money can not be derived from else where.
I do not really understand what this program is going to as far as cost goes. If it replaces the current fees great but in addition to that is a lot of money that I do not really have.
Decrease in enrollment
Higher costs
Students already have to pay a crazy amount
I already pay a lot of money for tuition, fees and books.
I see that having college specific program fees could make understanding the charges on a student account difficult and confusing, especially if the student is taking courses in several different programs.
More money to attend UW
Paying extra money is always a disadvantage, but it's worth the programs we get in return.
Higher costs for those without scholarships
Extra cost that pays for things I don't utilize
Less affordable schooling
Makes college even more expensive
Lowers the chances of a person returning to college
Students will seek out programs that do not have fees at other colleges
Na
I think that some individuals already have a hard enough time affording school and even if it is a little bit more some people are not going to be able to afford it.
Schooling is more expensive
Spending an extra \$400 a semester is a huge impact on my finances, especially as a 5th year student who does not have remaining scholarships
I don't think its good to have people pay for equipment for classes that they really don't need and most likely won't utilize in their career fields.
The small bump in cost doesn't seem like much, but in my Casey scholarships barely cover my cost of tuition. So this slight increase has to be paid out of pocket.
Most University students are living off of a limited income.
I don't see any because the PETE program rarely sees any money it just goes to Kinesiology
I feel like college is already expensive and this is just adding to it
The university keeps raising their rates. It went up from my freshmen to sophomore year and it wants to go up again? The Wyoming constitution has guidelines that say the university should be as close to free as possible. But, Wyoming keeps raising their rates while also cutting back on things, for instance, coe. It used to go until midnight and it got cut back to 11. Sunday's hours got cut back too. But you can't keep raising rates and offering less. That is how you lower retention rates.
This is more money that I will have to pay to attend the school. The higher tuition and fees are rising is making it difficult for more and more students to attend college.
Losing money or not put to good use
Just for the minimum 12 credit hours to be considered full time, that's a pretty large sum of money and tuition already isn't 'cheap'
Overcharging students for already being overcharged
Financially stressful

Cost more money to all and we may not see these benefits
I don't know if these program fees will improve the quality of advising or the time spent with the advisor. They may also make it harder for some to afford the education.
Will increase tuition rates for students who already struggle to pay.
Extra money that isn't going where it needs to go that I could spend on books
Tuition has steadily gone up from my freshman year until now. I know that things rise in cost and we have budget cuts, but I feel like there are ways to decrease spending on other things to have sufficient funds where they are needed. Tuition is hard enough to cover for some students, the steady rise in cost just makes it more and more difficult
That the prices for students to attend classes goes up.
Some disadvantages of the fees would be that some people can't pay for these credit hours. Even if someone is dedicated to this career, they may not have enough money to attend.
N/A
I might be dissuaded from taking a class if it costs too much.
I'm already paying a lot of money for school so I don't see why I need to pay for each credit I take.
Students never like more student fees.
Possibly for students who are not eligible for financial aid due to their parents income, yet receive no support for school expenses from them. And anyone in rare financial situations.
We already have so many fees
see above response
higher rates
Students already have a lot of expenses.
I have to spend more money that I don't have to get my degree
The cost to attend this college
Just accounting for 42 upper division credits results in \$1,134 in fees. Yes, that's spread across 4 years, but that's still a significant amount of money. It would be beneficial for students to see a cost analysis of their major's needs, and why the \$27/credit hour is necessary.
It's more depending on your major
It will make it harder to pay for college and my education.
More expensive
Affordability for people who have to pay for school out of pocket/ student loans
The overall cost will add almost 2,500 dollars to my tuition bill.
with costs rising, it could affect someones ability to enter these programs
I think certain classes might require more money than other classes, like a lecture vs. a lab.
I would like to know exactly where the fees apply, specifically is it lab related mostly or what?
More expensive
Raises the cost of tuition on top of the already raising of tuition per year.
This will cost more money, on top of the expensive requirements to get into the program (books, supplies).

It seems to me that quite often the fees that are imposed are never actually seen by the departments they are for. This is very frustrating when I am paying that money and expecting to see the benefits and yet see none.
A lot of people would probably not be able to afford it.
More money to spent on something that we as college students already can hardly afford.
I don't really see one at the moment. I was paying 200 or more for a single class through UW before.
Additional expenses on top of paying tuition.
I am an online student. I don't think it is fair that I have to pay fees for supplies, equipment use, simulation lab and liability insurance.
I have not received any advising or career readiness eval. I couldn't even tell you who my adviser is. No reaching out by "whomever" it is.
These fees will add up and can be expensive for students like me who have to pay their own way through college.
it is more expensive and will lead to having to work more through college
College is already very expensive and having more fees will increase the amount of money we have to pay to be here.
It makes it harder for students to go into the program due to the cost
More expensive possibly
Outreach schools like UW at Casper is already paying an extra \$30 per credit another \$12 per credit might be a hardship for people who need scholarships to afford college
Paying more money after tuition already continues to get more expensive every year and some of these programs that want to be implemented already could be and with no cost.
It is fare for everyone
As an out of state student who transferred here I don't qualify for a lot of financial aid and these fees on top of tuition and living expenses seems overkill.
The fees might not be used for what they are intended for.
Attending university is already expensive- also, do students get a say in how this additional income is spent? What if a student doesn't feel like it's used in an effective manner to support educational goals?
They raise the cost of tuition significantly: if I took 18 credit hours again like I have previously, it is an extra \$400 for me to go to school and is not necessarily money that I see the reward of spending.
More money
Maybe pricey for some
1. Can get too expensive
More financial burden on the students
Higher cost of attendance
I think it could discourage students from choosing certain majors because of the cost differences.
Some students may not be able to afford the fees.
Fees can add up
The loans offered through UW did not fully cover my tuition this year so if you are going to add additional fees you need to also evaluate the amount available to students in your loan programs.

Less students being able to afford such a large jump in price
We would get no real life experience if we did not pay fees in order to do clinicals.
nobody likes paying more money
Its costing the students more money
Makes school more difficult to afford.
More expensive
confusing unless we get that breakdown we just saw each semester
They could raise cost
They say we get all this stuff but I never see it. It's just money that they use for other things
The extra costs can definitely be a sore sight, it was for me when I didn't realize how my scholarship didn't cover it. I think that if fees were understood better, there would be less aversion to them.
It will be harder to afford taking a full class load.
It will not benefit outreach students completing nursing programs online
Cost. College is expensive, and it can be frustrating for students when the cost is continually raising.
Gets expensive especially when the fees are added for a class that doesn't require clinical settings.
The extra financial burden. Other university distance programs are looking better all the time.
Not covered by scholarships. Students have to pay hundreds of extra dollars for taking classes that they are already paying tuition for.
The added cost to the already high out of state Tuition cost.
My program has put me with an advisor that withholds perk -#, is unfriendly and that I'm uncomfortable with and when I request a change they tell me they can't because they don't have enough staff. I don't see there being an advantage to paying this fee at all. I do all advising through my other major.
It means students who are already struggling to pay for school will have to pay more.
There are a lot of fees that we already pay, I feel like there would be a way to rearrange the money currently in place instead of charging students more.
Some people who really would like to go to college but didn't do well in high school and therefore cannot get scholarships may not be able to pay for college and get the education they want/need for their future.
Why have additional fees? Is tuition not already expensive enough?
Student loan amount increased in direct correlation.
More money I need to pay
They make it harder for some of us to afford. Especially those of us pursuing a science based degree. On top of tuition rates etc. and just plain old regular life, not to mention the cost of living in Laramie.

<p>But we don't get free paper even though we pay fees already, computers in corbett are very slow and sometimes the printers don't even work. I might be ahead of myself but when i pay for uw fees. I am paying for the gym that I used every day but I do not find it fair that we have to pay more during the summer time when I pay for both fall and spring charges. I feel like if I am a middle class full time in school student with a job on a side that the summer package should be include. Also I believe there should be time modifications to things around the university because i know all college students have messed up schedules. I also feel like it is hard to pay per credit hours to freshman weed out classes because they are designed to fail students and cause them to drop out. let me talk more about this I do not have a problem with hard classes if the teacher properly teaches the material well but if the teacher does not I just wasted my money. I would highly recommend that the board look into some of the general classes at the university. Some as well as my classmates have recently got a new teacher to the university of wyoming.</p>
<p>Having to pay more when college is already so expensive</p>
<p>More students won't be able to afford an education; I may have to quit completely.</p>
<p>There are already a lot of additional fees, so it gets disheartening to have the price continue to go up.</p>
<p>I the cost might not be feasible for some.</p>
<p>Of course raising any fees raises my tuition and I work 2 jobs to pay for college so of course that affects me.</p>
<p>Detering students from entering the college or leaving the college. The more credit hours someone takes the less likely they will be able to use the benefits from the fee but still pay a great deal for it.</p>
<p>It could make it more expensive in some Situations</p>
<p>Makes tuition more expensive</p>
<p>UW Has already raised tuition and fees so high since 2015. Stop raising our fees for funds we both know won't even be used to benefit the general student population.</p>
<p>How much better is it really going to be?</p>
<p>more expensive, already hard to afford as an out of state student, fees are already very high</p>
<p>The fee's to attend college are already high.</p>
<p>It could have the potential to make you spend a lot more money</p>
<p>I will have to pay several hundred dollars more on top of what I already pay which will be much harder to afford.</p>
<p>I guess one disadvantage that I see is that maybe some people may not be able to afford it.</p>
<p>The fees probably do not go to students</p>
<p>School is already expensive enough. I had to pay \$1500 for this semester alone.</p>
<p>The money I don't have the school wants me to pay more of.</p>
<p>These fees per credit hour may impact people's decisions to go to UW because they may be too much of an extra cost.</p>
<p>The disadvantages for program fees are the steep rise in the fee.</p>
<p>Local jobs are low paying and living expenses are high in Laramie. A fee increase eliminates students ability to get out of UW without debt.</p>
<p>I have been working two jobs and going to school to stay out of dept. I'm worried all my hard work will be for nothing if I'm not able to pay for it and have to go in dept</p>
<p>I cannot afford tuition without financial aid. Trump is trying to make large cuts to those types of programs, so I wouldn't be able to afford this very easily.</p>
<p>Having to pay more when certain students may not be able to see the direct impact of where these fees are going towards (ex. undergraduate students have little time directly in the clinic)</p>
<p>We were unaware of these additional fees when we chose to go here and now don't have an option but to pay them.</p>

More money
Takes more out of my pocket.
We have no solid evidence it will improve anything.
Increased program fees could discourage some students from studying in UW's Health Sciences fields if these fees are a substantial amount greater than what they might find at another university.
That the \$27 dollar per credit hour goes to administrative salaries and not to the program itself. \$27 dollars would only add 1,500 more dollars to a program that cost 20-25 thousand dollars already for my portion. Obviously that added cost to each student creates an influx of dollars. I am attending the BRAND nursing program, and the 15 month program is self taught with exception of a summer (2 1/2 months) of simulation lab. This program is expensive and the support is minimal. I am not clear what this added fee will assist with the nursing program, unless it is to support staff salaries more.
the amount of money being asked could hinder students that struggle to pay tuition
Being an online student I don't see any benefits to the increase. I already pay extra fees.
Disadvantages may include students not being able to afford it, or not seeing the benefit of the fees.
May discourage some students from choosing fields that may cost more even though that is where their interests lie.
What do you see as disadvantages for program fees?
I don't know
Hard for students to pay for
Students already pay enough
Because I take classes online, I have to pay the same tuition fees but do not have the opportunity to participate in clubs/events because I live 6 hours away.
We have to pay more based on declaring a major.
Increases tuition.
Extra costs for students
Students have to pay more
It may seem as though a student is being punished for taking a heavier work load.
I don't see any disadvantages
It can be expensive
that your just paying more money then you are already paying
Students going broke paying for the program they are passionate about and thus dropping out
Some courses offered have credit hour values of 0.
More fees means that classes will be more expensive. This is bad for the students because most of us can barely afford college as it is now.
More money students have to spend
Potentially raising costs on students for programs that they don't use or are ineffective.
Its unnecessary
I am undeclared and get charged a "computing fee" for what exactly? Seems a little like a rip off. I don't see any place that this fee is going to help me declare a major.

It would discourage students from taking classes
It's costly.
Possible loss in students from the fee changes
Students especially independent students with no outside help can't afford said fees
It's a delayed gratification process, UW is aiming for a tier 1 school rating so to keep up with funds it's slightly leaned upon the students. Students may not notice the benefits that are coming from the extra billing.
Just the extra money I have to pay.
Paying more money stinks
Higher fees may dissuade students
I have no idea what these even are?
I feel as though some people might think these are "additional fees", especially with the idea of an advising fee.
They might change the electives that a student might take, limiting their experience and possibly keeping them from finding something else they really enjoy or are skilled at.
N/A
N/A
It might deter someone from taking the course if they feel they could take it somewhere else cheaper.
Higher costs for certain degrees
Having to buy extra class resources on top of the program fee.
Higher cost for students
I don't really know what they are so I couldn't say
Retention for in state students who attend UW with financial stability as their primary reason could potentially decrease.
I honestly don't know them very well
Really, I don't see big disadvantages to the increase in fees. I see transient discontent among the current student body and probably among soon-to-be UW students, understandably, but I do not think that the fee increases dramatically impact the affordability of the UW. The UW will still be considered, by all measures, to be extremely affordable. Still, the UW administration should proceed carefully, because we all know well that the affordability of the UW is a huge asset to the university in terms of attracting a diverse group of young people from all around the United States and beyond. Lose the affordability edge, as it were, and the UW will lose valuable leverage in the race for young minds.
I don't believe the money is always allocated in productive ways
Some programs need very expensive equipment and the funding falls to students.

**Responses to Question 24:**

**"Are there additional services you would like to see offered to help you complete your degree program?"**

Not at this time.

More access to work study? I have no idea how it works

It's a double edged sword.

Yes someone who really cares about my desire to succeed and graduate and someone who will help me establish my plan of what I need to do, how to do it and when it needs to be done because I don't have all the knowledge to do it myself.

I think more field classes would be useful. Hands on experience is very important so that we are prepared for real positions.

Programs that actually work. SO many programs on campus say they are there to help and improve, however they are just a big flop and a waste of time and effort.

Specific advisor for my degree beginning freshman year.

Just to add it said advising is one reason for fees there for i think i should be able to pick an adviser i want they adviser i was give hasnt helped me at all and i asked to get a different one and they told me know that really upset me because i would like the right help and i feel that the adviser givin to me doesnt uphold what a adviser is supposed to help with

There are many services offered to help complete degrees that students are able to take advantage of

More scholarships for out of state students

More knowledge about internships, scholarships, career fairs, and industry knowledge for family & consumer sciences - design, merchandising, and textiles

No

Scholarships to pay tuition, mortgage and bills as I attend school. Currently it is a job that does that and I can only take a limited amount of classes.

An advisor that actually cares.

No I just want to do what I have to do, get my degree and get out of here before I can't leave without 50 thousand dollars in debt despite being an in state student, and having to pay for things that do not impact me or my education such as an advising center or a diversity department

I feel like all these extra services are paid for by the many but utilized by the few. I would rather just go to class and get a degree.

More research positions

Where do I start? Parking? The ability to choose whether or not my hard earned money goes to the football player elites? I do lose sleep at night wondering if their \$180,000 food budget is feeding them well enough. The choice of how my tuition money is spent, period. But, really, being able to park within 5 blocks of the school would be really helpful. Might I suggest a parking garage on 10th and Grand, where the mostly empty faculty parking is now? It makes me warm and fuzzy inside to play Frogger on Grand multiple times a day while that parking lot is very rarely at half capacity, especially during our blinding snowstorms with subzero wind chills.

No

Not really. Maybe pay professors more.

Stronger internship program.

No

More internship opportunities presented to us.

I have never run into problems with registering for the courses that I wanted to enroll in until this year. When making my plan for next semester, I found that 4 different classes were offered at the same time, forcing me to chose one of them. By offering more lecture times for some required classes, students are able to enroll in classes with greater flexibility.
I am unaware if there is anyone that helps find and set up internships for students, so I would like to have that as a part of my program.
N/A
Especially for Microbiology there should be a "this what you can do with this degree section" because I'm about to graduate with what seems like a useless degree
Not that I can think of.
I would like to see more Math tutors available.
Help with vet school stuff
I'd prefer to see support and continuation of the current resources. For example, I think it would be beneficial to improve support of and improvement in teacher proficiency.
Free books
Better use of computers and technology.
More scholarships
No
None at this time
I would like cheaper tuition as a whole or even understanding from professors about college students having busy lives and jobs.
No
I would like to have a more specific pre-veterinary focused program. While I appreciate the knowledge I am gaining in livestock veterinary science, I do not expect it to be my focus after school. Having more classes that include information in companion and exotic animals would be very beneficial in preparing those interested in veterinary school.
More SI classes offered for more courses.
I would like to see more career readiness programs and outside the classroom/ real-world learning opportunities.
No
None that I can come up with at this time.
No
Optional lab hours to come in and learn with a hands on approach
EFFECTIVE MATH TUTORING, better academic advising where the advisor gets you from point a to point B ASAP. Online classes where the professor is on campus, or information prior to registration informing the student that the professor is on or not located on campus
A bus system that covers Laramie better.
no
not as of now
Services that assist me in my future career path in production agriculture would benefit me, but, are not currently offered.

Have feed cover books
Actual review groups for exams
None
Advisors that have a clue
More available TA's
Better advising sessions that aren't directed solely towards next semester's requirements. I have a ton of credits just hanging out. I would like to know how those can be used towards a masters or minor. Often students are looked at as a check mark.
N/A
I feel completely capable of completing my degree program with the resources already available to me.
Not really..
No
I'm sure there may be, but I cannot think of any at this time.
Additional advising/ career counseling for after graduation
classes offered every semester instead of just in the fall or spring.
Support as a student in general, a place where you go and speak about teachers that are unfair, teachers that are corrupt, and teachers that are looking to keep their job and not to keep students.
I would like to see a program for transfer students. As one myself, I had a difficult time transitioning.
I would Like to see a full sample coursework for the major Rangeland Ecology Watershed Management
Career services is a wonderful resource when applying to grad school or other jobs and having someone who would be in our college to do that would be a great resource as well
Nope
I would like to see an improvement be made for transfer students. I had a heavy class load each semester that I was here because the degree requirements were changed (for international agriculture), were not communicated well with the community colleges in Wyoming (as a junior I had to take 1000 level classes), and now I am scrambling to make my schedule work so I can graduate with a Bachelor's Degree in 4 years. This transfer has been very aggravating considering that neither my advisor or the registrars office could come to an agreement on which classes would and would not be considered for my degree. There was a point where we thought that classes I had taken in the summer, so I could graduate in May, would not count. It would have been a waste of my time, money, and efforts, but thankfully my advisor fought to get the clearance from the registrar.
no
N/A
Not that I'm aware of
no
To have some classes not only offered every other year
Unsure at the moment.
Not that I can think of

The online program is complete and offers many advantages to outreach students. I can't think of any options that I would add to the online tools.
Stop cancelling classes. I cannot graduate on time if the college continues cancelling and changing the time classes are offered.
Honestly, better equipment for my labs. I had to wait an hour and a half to use a single plate spinner due the entire class needing to use it. Allocate money better too.
Rosalind Grenfell has been helping me figure out the classes I need. But thanks any way.
Not at this moment
Don't put these fees in place
I'm not sure yet, this is my first semester at the University of Wyoming.
Free food
Bring back the Russian program.
No
more scholarships for the programs that have to pay more.
None I can think of
(eye roll) How bout you actually hire qualified interested instructors. Ones who want to teach and can teach. That's how you can help me graduate.
The library should be open later, half acre should be open earlier.
Better support for Non-Traditional students.
Not as of yet.
upper division tutoring. ( i cant find any for my level of classes)
No
Yes break fees down by department rather than college. The Arts and Sciences college should be split into the college of Arts and college of Applied Sciences.
Nope
Not at this time
A broader range of programs, and Naval ROTC.
I'm not sure.
A stronger Chinese program
An Art education minor
Better teachers!!!
Not sure.
More opportunities for internships and other work study positions.
Just no out of pocket fees.
A great emphasis on specific fields within the College of Arts and Sciences. Many of the programs are fairly broad. A greater list of potential employers do not mean a greater chance of being employed.
None
Actual one on one advising. Ability for special interests to be studied and applied to the degree

If there was a tutoring option for art I think it would be helpful. Whether that is a structured time from professors or grad students to help underclassmen understand some basics. It may seem like an informal critique or maybe mini-sessions outside of what is put on by a club.
As an outreach student there should be more organizations and resources that we can join or have some type of online club to feel more involved without having to step on campus!
Yeah, an advisor that gives a crap about the students she is supposed to advise. @Narina Nunez. I have seen you once the four years I've been here and I'm guessing you're going to take some credit for the students who graduate when you do nothing for us. Literally why are you here
University of Wyoming is my third institution that I have attended and has provided me with the best resources possible; however, it is expensive to attend this school even as an in-state student.
None that I can think of
more career services? maybe i just haven't found then yet
Geology tutoring outside of the instructor.
N/A
No
No
No
No
Professors that are taught to teach, NOT DO RESEARCH
None I can think of.
I want to see more undergrad research opportunities for STEM fields
No
Nope
More professors teaching upper division rather than grad students that don't have to be offered benefits with lower pay.
n/a
No
The WiFi the last two years is terrible. It used to be great. It sounds petty, but it really is hard to deal with when it dumps in the middle of something.
N/A
Stronger tutoring assistance for upper level A and S courses.
More internship opportunities
scholarship and program help for struggling students
No
Counseling on graduate school applications would be nice.
Live chats with librarians.
More shadowing opportunities
NA

Less prerequisites for classes outside of your department!
I would greatly appreciate it if there was more class flexibility. If I could, perhaps do an independent study of a class that is technically offered by the departments, like Ancient Greece in history or Medieval Period in music, but that isn't actually taught. It would allow me to take required classes for my majors that actually interest me and apply to my plans for grad school and my eventual professional career.
No.
Yes. I wish there was a way to gain more laboratory experience outside of class. I won't say unsupervised because I realize that will never happen, but it would be extremely helpful for chemistry students (and probably many other majors) like myself to be able to practice and expand upon some of the techniques learned in classes in a lab. Just a thought.
Support for non traditional students such as access to grants and scholarships.
Dedicated pre-professional (pre-medical, pre-dental, etc.) health advisors who have experience in and connections to the field
Cut the football and basketball budget, then use the "windfall" to hire much needed support staff such as janitorial and maintenance.
I'm about to graduate so you're a little late, but I would have liked to see actual experiments ran for undergraduate teaching in the physiology/zoology department
None that I can think of
More science related tutors other than just for chemistry courses.
I'm not worried about me. I'm worried about those who have financial issues. I have friends who already live off the dime for food. And donate blood all the time just to eat. But our opinions do not matter because you will still follow through with it.
No
Study groups and resources
I like the idea of a study area specifically for physics. And the same for other departments. I've seen them at other schools, and its a nice way to get students together that are going through the same experiences and classes to help each other and create more of a community within the department.
N/a
Easier access to tutoring services for outreach students
no
I feel like advising for double majors is totally trash. My advisors have no idea what to do with me, and I'm constantly panicking about whether or not I'll get in all of the classes that are required or if something is going to get lost in the crossfire.
More computers available to those not in engineering. Engineering students have computers and expensive programs available to them at all hours while some buildings in other colleges close at 5 and do not have a comparable computer space.
Other than perhaps a specific service to help undergrads get involved in research, no. Were all just making out way in life.
I don't know.
not that i can think of
No
allowing the teachers and educators to be able to interact more with their students instead of spending time proving their mastery of their chosen field.

N/A
I would like to see improvements in math tutoring. A new "quiet" room for the MAC would help separate individual study from louder group study. Also, late STEP tutoring hours are not very convenient for students that have children or other evening commitments.
I would like to see free printing become available. I dont appreciate the fact that community college doesnt charge printing costs but a university does. It is not a huge deal but is an annoyance. Also, there are many religious groups on campus but I have yet to find an organized atheist group. It saddens me that students are subjected to weekly sermons on the doorstep of the union but there is not support for every belief.
As a distance student, I wonder if it is worth it for me to pay so many extra fees.
Maybe cut funding from the football to pay the extra amount per credit because they are garbage and all of our money goes to them.
No
None at this time.
-
None that I can think of.
It would be nice to have the ability to get some degree evaluation help throughout a semester rather than just being another face my advisor sees for 15 minutes and doesn't really seem to care to do any of the work that might exceed those 15 minutes.
n/a
N/A
No
No
nope
No, so far so good. Except for parking for commuters. A centrally located parking garage could and would be very useful, and would also generate more revenue as the commuters who don't pay for parking might, if they were closer.
N/A
Services to guide and encourage personal interests, to help students discover if they are truly passionate about what they are doing.
Nope
Perhaps more scholarships and job opportunities, so people can pay for their education without the stress
Idk
Be able to go through the program faster and not spend so much money.
I think that the services offered are very good.
Yes, hiring teachers that don't do a shitty job giving tests.
Knowledge of scholarship opportunities
No
Yes more paleontology programs but that wont happen

I would like courses that I need to be offered when I need them and courses that have not been offered in years to be taken off the course catalog so people like me don't think they are legitimate options when they are not.
No
More tutoring for high level courses over 4000 level
no
Not specifically
More attention needs to be paid to seniors who can't get into classes that they need to graduate on time. I know of several students that are taking classes that they wouldn't normally take, but they have to in order to graduate on time. Sometimes this is because of faculty turnover or poor guidance? Also, I hope you do a survey about the change being discussed that would change the minimum number of courses that students can take just to change the time-to-graduation statistics. Some students choose to go to school part-time because they prefer to work to pay for school instead of burdening themselves with onerous student loans. Who cares if some students take 5 years to get a four-year degree... they may even learn more about their discipline. Leave the choice up to the student...do a survey to get feedback.
More opportunities to receive grants and scholarships due to this new program would be good to see.
No.
For all programs, particularly with the many mergers that have happened, I would like to see more of a balance in the administration, advising, and instruction of them. My experience thus far has become very biased towards particular disciplines which are not representative of my concentrations. Likewise, my concentrations are not being fulfilled because they are not the dominant trend in my department, therefore facilitating my inexperience as a student. Programmatic feed should work in tandem with curricular evaluations of departments, department staff, and advising procedures to ensure the quality of programs students had before mergers and programmatic fees.
Wider range of time for tutoring.
I cannot think of any at this time.
Not at this time
Formal degree advising
More funds available to single parents to allow them to focus on their studies as working during a full time class schedule is extremely taxing and almost impossible to maintain with work.
No
more help through individual colleges
Free printing:)
None at the moment
N/A
Honestly, I wouldn't mind some of this money going to pay teachers salaries or doing anything to keep good teachers here. The CJ department now has 2 professors. How is that acceptable? If you have good teachers that can offer all of the classes you need to graduate in a timely manner maybe more students will stay too. This money also shouldn't just be going to STEM, which it sounds like it is not, but still. I'm tired of STEM getting the little money that comes in and then everyone else gets nothing. Uwyo doesn't need to be a school of mines, it should offer a great liberal arts education too.

nope
incentives to get more involved on campus.
None. I feel adequately provided for in my degree as far as what can be used, even if I don't.
No.
No.
Bring back normal library hours, or better yet, increase them to be 24hrs/day. This is a university, money needs to be spent on resources that are actually helpful to students. I understand athletics is an important source of income for the university, but the point of a university is education, so act like it
I would just like for our material fees in the art department to be included in the fees that we pay at the beginning of each new semester.
I would like to see more courses offered in Casper. I have children in school and can not relocate to Laramie.
Telephone, or zoom conferencing.
- more tutors! (If this is where the fee money is being put I wouldn't complain one bit)
Money management
Less academic course requirements. What do I need calculus for to major in Wildlife and Fisheries?
No
Not that I can think of at this time.
No
yes, they could even be offered for free
I would like to see more involvement with resources helping to get students jobs/internships.
I wish there was an option to pay for games. I never go to them... so, me paying fees for the football team seems kind of pointless.
no
No
As far as my degree program, I think the department has enough money. I don't think they need to raise or lower fees since they are not absurdly high as it is.
Advising needs serious help. I have personally experienced thousands of dollars and whole semesters wasted due to poor advising.
I have no suggestions at this time.
N/A
Nothing comes to mind
I would like to have more hours for courses. Its difficult to finish all the subject in the textbook with 3 credit hours. Even if the professor finishes, he'll have to teach fast or cut a lot of syllabus. I hate credit hour system. The fee should be per semester or per course atleast, not credit hours.
NA
N/A
no

clearer use of degree evaluation and better advising. I have two majors and they never communicate so its hard to sign up for classes when they don't want to communicate.
I would like to see classes not offered every other year but instead every year.
No
Things are good.
More hands on and field work
More tutoring opportunities and available study resources
15 minutes between class blocks instead of 10, there is literally no feasible way to make it from the Classroom Building to the Buchanan Center for the Arts in 10 minutes.
There are none yet, although I wish this email is sent out every academic year, in case I do have any concerns.
I want you to stop adding any services that do not directly add to the educational requirements associated with earning a degree.
More courses available for distance students
It's quite difficult to understand what classes to take and how requirements work. Both for UW and transfers to other colleges.
no
I would like to see the college hire a few permanent pianists who can accompany students well.
I would prefer that classes for each upcoming semester are decided earlier so that we can have a longer period to plan before registration.
I am being asked to do projects that require specific technology capabilities that are not up to date with the current technology. For example, I am being required to do video conferences in a class through Canvas Conference. You are giving away an iPad which is not compatible with some of the features of Canvas yet a very popular device used today. The conference requires Adobe Flash Player which is no longer used by devices such as the iPad Pro. That issue should not exist for a student working in the changing world of technology required today.
Can't think of any
I'm sure there are
Yes, I'd like a secretary to type my papers. I'm not saying write papers for me, just a secretary that would type what I say, like a court reporter.
No. I'm fine as is.
Advisers that are worth something. I have been more than unimpressed with mine.
more tutoring
I am a physiology major. Which makes a majority of my classes science classes. I think it would be extremely helpful to have more tutoring opportunities other than step tutoring for more help. A lot of my classes aren't offered for step anymore. Also, I think the advising system needs to be revisited.
I would like for classes to not be during the same time slots especially to graduate and if there were more time slots/online options for classes.
No
Not that I can think of at the moment.
As an outreach student, there are several courses that I wish were available to me, but I understand that I chose to go with outreach for its convenience and it would be impossible to have an outreach program that worked 100% for everyone. What matters most to me is that i am able to finish my entire psychology degree through outreach.

more sections available so I don't have to worry about over lapping classes
child care
A better student advising system, which is already being examined through this proposal.
I would like to see some sort of class excursions to learn in the field, especially in geography since much of the work for this profession is fieldwork.
UW gets enough money. Wyo constitution states education must be as close to free as possible. Get the \$31 from my taxes
Better staffing, and perhaps smaller class sizes, in the chemistry department! I don't need more tutoring, I need professors who know how to teach. Math is normally dry and boring and seems utterly pointless, but the math department here at UW has been overjoyed to offer explanations as to the motivation (ie. why do I need to know this?) and usefulness of subject matter. In other words, they have managed to give math meaning. On the other hand, the chemistry department has managed to strip all meaning and relevance from an otherwise fascinating subject. In other words, they have some how managed to make chemistry dry and boring. They are also unwilling to include proper explanations along with test/quiz grades, or anywhere else for that matter. How am I to improve if I don't understand what I am doing wrong?
A better feedback system for the teaching quality.
Not that I can think of
NA
No
No
I haven't been here for long enough to answer
In addition to the math assistance center, have a science assistance center, where people who know how to do physics and chemistry and stuff hang out.
No
FREE LAUNDRY IN THE DORMS!!!
Advisors should be held to higher standards. Students should not have to find themselves seeking outside advise because their advisors don't have time for them.
More tutor options
none
I dont want to pay "field trip" fees ... i am a histroy major and I've never gone on a field trip. Why don't you just charge the out of state people this crap?
n/a
Combine all materials cost to tuition( all those pink, yellow, and blue tickets that are required for every class) within the Visual Arts program to show the true cost of the degree and it would have helped to have that attached, because financial aid would have gone up to help pay and my scholarship would have covered the cost before. Also, I find it to be a misrepresentation of tuition cost.
Nothing at this time, no.
My only setback is the fact that I was never assigned an official advisor, not even a general advisor. I am currently a journalism student, however I would like to have an advisor who is knowledgeable about what the COJO dept. Offers and my options for a more individualized course load.
Nope.
More provided materials in art classes.

I actually already have my undergrad degrees...
no
If the fees are instituted I would expect that WUE and other scholarships would increase in a proportionate amount in order to mitigate financial stress for students from low-income families.
N/A
Cut costs elsewhere if others are raising such as the outreach fee.
Not really. Everything sucks.
Not sure, maybe just better advising
Guest speakers who are currently working in the field of health care to come to the university to talk with undergraduate students. They can talk about their experiences and pathways to get started in the health care and or other fields.
No
None that I can think of.
Not that I know of at present
Internships. Scholarships. Jobs for students. Lower cost of textbooks. Subsidized meals for students.
And I don't mean for these things to be paid for by new fucking fees. Pay for them by redirecting funds that we're already paying. Stop giving corrupt institutions everything they want without even raising one fucking word in protest.
Not that I can think of. I wish more of my transfer credits were allowed.
-
We should definitely have internships and people we can work with, and SCHOLARSHIPS. The AG department also has internships, work opportunities, and tons on scholarships! I haven't heard about ANY within the psychology department.
No
I'm not sure.
Higher level tutoring for people in senior or junior level classes that usually don't have available tutors.
Not that I can really think of!
No, stop with this stupid per program fee, and let me just take my major. fuck off.
Yes, I would like to see some changes in the presentation of classes. Specifically the biased information that is presented to students who have strong religious beliefs. Some instructors make it difficult for a student to incorporate the material they are taught with their beliefs.
no
Not that I can think of.

Scholarships for Internationals in Health Science College. Not talking full ride, but some percentage of scholarship for us Internationals would help us a lot, special since we belong to a country with less education quality and low income rate.
I would like to see reductions in how many outside of your major credit hours to graduate. I primarily want to spend my time focusing on my major so I can get done quicker. I am not saying to not require some because there are some classes that are outside of my major that could be important.
Less fees charged to students that "pay" for materials and technology.
More scholarships.
better advising
Additional degree counselors specific to each department.
More help for students who may not be able to pay the fees.
I'm on the GI bill, so this really wouldn't impact me.
Perhaps more money should be put into advising/advisors that understand what will help students graduate and be successful. I would be more than willing to put money into a helpful and caring advisor.
Better advising
No
Help people will financial aid instead of making it difficult.
No. There are plenty of services that I paid top dollar for but there is also an abundance of wasteful spending on the university administrations part.
no
I think that one on one tutoring sessions are good but group tutoring could be even better. Getting to see how other students think really helps the way most people learn.
Schedules monthly appts to meet with advisor
I would like to see evening class, more online classes
No
more tutoring options for upper level classes
N/A
Free laundry
technology
just better tutoring for higher level classes not just the 1000 level
No
N/A
Improved advising and job opportunites
My degree is sufficient
Just better communication all around with activities and resources.
More classes that are specific to teaching programs that are needed in your profession. Such as excel, spss, and publisher. Instead of only teaching us small parts and having us figure out the rest.

No
More tutoring opportunities
None that I can think of. The college of business does a nice job with giving me real life experiences.
Not at this time.
I would support a program fee that say brought Bloomberg back to the college for more work readiness.
I don't think so, but I am probably not the most conventional student
I felt locked into the COB once I started here. Plus the required courses are a struggle (and not interesting) compared to our actual interests/major.
Cost is a huge factor for me so no.
Additional tutoring or graduate student tutoring programs
No
I wish the college of business was open 24/7. I also wish there were more office hours and unassigned labs that we had access to if we couldn't make it to our specific section or our professors'/TAs' office hours.
none.
More sports management/business classes
Better advising in the College of Business. Individual advisors assigned to students instead of the group advising
N/A
More availability of faculty and advisors to help you throughout the semester, not just the beginning or end.
In the COB student lab, we could use some computers with double monitors.
I cannot think of any at this time.
none
Some
SI for upper division courses
I would like to see 4-5 advisers that would be more readily available to help the students.
Free tutoring.
More help with finding jobs after graduation
None
More personalized advising. I often walk into my advising appointments and don't know which advisor I'm getting. This doesn't make me comfortable trusting the future of my degree with them when they haven't taken the time to know more about me personally.
NA
I wish there was more, but it would require more money and no one wants to pay for more.
None at this moment
Just as long as they don't close the gym, I'm doing okay.
I am not sure
No, I rarely use the ones provided for us now.

Tutoring for my upper division degree-specific classes. Currently none is offered, not at STEP or SI or anything
Not that I can think of
No
I support any money that goes to teaching assistants/undergrads that aid classes.
STEP tutoring for all classes.
No
Better advising for the college of business. At least have set advisers who know what the hell they are doing and at least try to help the students.
More awareness of and participation in degree specific conferences or competitions
I would love to see Bloomberg and the WSJ subscription available for business students again. A greater focus could be placed on real world applications, software and skills. This fee could potentially allow the university to offer more internships and training opportunities.
Better advising
No.
N/A
more sit in sessions or instructors willing to help individuals
I feel like there are many resources in the building we dont use, or we cant afford the best programs to help us succeed in our classes, for example getting rid of bloomberg
I would like to see a change in education structure. There are no hands on classes and real world situations in the business program. How do you network? how do you teach recruiting? The importance of internships. The business program does not set the students up for success.
None for now.
No
The programs already offered have been very useful to me.
Better advising so you know when classes are offered and are not delayed.
More classes should be offered in the J term and in the summer. I should be able to have the opportunity to graduate as fast as I can and/or take as many classes as possible.
Not that I can think of
I'd like to see more opportunities for tutoring and other school help offered at later hours for students who work during sessions. I'd also like to see more help for foreign language students offered (I need help in french and cannot find anyone in any of the services provided from the university that are covered by my fees that is able to help me with french grammar.)
Deters students from STEM and many won't afford it if it were to happen next year or the year after
No
None that come to mind
I would like to see more job fairs, more networking events, and more career readiness programs.
More financial aid
No

no
Unsure
At this point in my degree, I can't think of anything that would create that much change in my current state. However, if the communication office had been around when I was an underclassman, I definitely would have taken advantage of it.
No
I would be done with my program if there were upper level summer classes for accounting, and business. If there was a way to have the option to take some of these classes throughout the summer that would be great.
Maybe more help opportunities for higher level classes. They offer SI and a lot more help for 1000-2000 level classes; when I personally feel like the upper division classes are the more difficult classes that I would need more additional help like that. Also would like if our student ID's allowed us business majors to get into the business building and allow to use the computer lab and facility.
None
No
No
Bring back Real Estate Finance!
I strongly believe that any student at the University of Wyoming attending the college of business has more than enough resources to help them succeed if they reach out and find the ones that work best for them.
A better advising program.
In my professional experience, the University does it's Finance students a significant disservice by not providing them the opportunity to access and gain familiarity with the Bloomberg platform. This is likely the most useful resource the college of business could provide economics and finance students that it currently isn't. The Factset platform is not a sufficient substitute simply because of the unparalleled market power held by the bloomberg.
more financial aide opportunities.
less stress
It would be nice to have career counseling and internship assignment at the distance sites. Many students cannot up and move for many reasons. This makes it difficult for those trying to change their lives to get their foot in the door. In addition, our state is a small community no matter where you go and my degree requires an internship. UWCC told me to find my own and good luck. If I cannot find one they told me I will be kicked out of the program and it is my graduating semester. Nothing like having no options, no help, and being told you have wasted time, effort, and money for nothing.
No
Please return the stock/news ticker in the business atrium to working condition! It was so cool and I feel like it would help attract more students.
More frequent contact with advisors
Required internships
The finance department has been shredded, I am for tuition cost based on departmental costs. For example, the accounting majors will have access to a wider variety of classes and faculty. For these added benefits, I'd be ok with department-based credit hour costs. That goes for my program as well.
No.
No

I would like to see an option for a minor concentration in the Outreach programs. Also more ways to be involved as an outreach student. More internship options and job fairs or ways to meet and talk with employers at the Gillette outreach center.
More internship and job openings other than just within our area (mostly Colorado)
More choices to our program.
No.
I would just like to see better and more personal advising in the College of Business.
No
I would like to not pay any fee unless I actually use the services it goes to.
Push the career advisor opportunity more. I had no idea I even had a career advisor until recently.
N/a
Easier access to scholarships
parking for sure
A better schedule for non-traditional students would be very nice!
I want real education teachers to teach us, not Random researches the university places in classes.
Cheaper books
Live text should either be used or not required. I've been here for two years and so far wyocourses is used more.
No
As part of the art education fees, it would be convenient for our Materials Card fees to come out with our tuition or be added into the credit per hour rate.
Online classes that are only offered on line should not cost the same for the classes chosen to take online.
More Note takers and understanding of people with Learning Disabilities and ADHD.
Required ESL Endorsement
Full year student teaching
More scholarships offered through the system
Not that I can think of!
No.
Bring back the Modern Language education program.
Maybe an extension Practicum to get student teachers prepared in a better manner.
The Praxis II should be paid for by the University for secondary mathematics education students. It is not required to teach secondary math in the state of Wyoming, but we are required to pay \$120 to take it for the University to have highly qualified status. I would not be taking the exam if the University did not require it.
I would like a service or class that offers students an idea of what it takes in different states to receive a teaching license.
I also want a class or some type of assistance in helping myself and other students to put together a professional and well-done resume.
I am in the education program through UWC and I think the faculty and the department do a really good job at making it so I can successfully complete my program. They also prepare you for getting a job and working in the real world.

Better/more involved advisors
Nope, all good
If a methods class requires the Praxis exam but it is not required for the state then the college should give a grant to that class to take the exam
More print options.
N/A
Certain classes offered all year long.
No
No
More financial aid
I wish that I could have been in more classes that related to my area of study. I honestly don't feel like I am ready to go out into the real world.
N/A
No, I have everything I need.
More information and advising.
Not that I am aware of.
I see none.
More one on one time with the advisors. I shouldn't be required to create my own scheduling form where all my advisor does is sign off on my sheet because I already did all the work. This should definitely be changed if the \$6 fee is added on.
More accessible advising would be nice. While I was trying to switch into the Foreign Language Education program I had a difficult time being able to meet with advisors period. The next semester my advisor resigned without any effort from the program to help me at the time. The fact that courses like Methods I and II are only offered in the fall has really helped turn the four year BA in Education into a five+ year program.
I pay a fair amount in fees for services that I cannot use.
Be open about the financial aid opportunities that the school offers, quit trying to keep them hidden.
I would like to see more teacher websites and have the opportunity to obtain free teaching resources.
N/A
more ag ed concentration fields
I am an Art Education major, so really I just want my degree to still be available once I get to graduation.
Praxis Prep
No
I would like to see supplemental instruction offered for tough classes at UWC like genetics. Students in my OVN class are able to use these resources in Laramie but I am not which isn't fair (ruins the curve).
Better professors and more sections for the classes.
No additional services come to mind at this moment in time.
A course on educational laws, the history and how it affects the classroom now

I wish I was more informed about these fees as where my money is going
EdTPA preparation class or more done or explained to help with the understanding of EdTPA as it is required of us our senior year/
Better advisors. The college of education has some good advisors but quite a few of them are very flaky, and not very helpful.
I would love if there was more support in licensure and moving to other states. I feel like I am going in blind applying for my license and have no idea how to move forward in moving back to CA afterwards .
As an Outreach student, I would like to be able to use the PE facilities at LCCC.
Maybe it would be nice to receive help to pay for the Praxis exams. Those exams are expensive, and it would be nice to receive a little more help not just paying for them but preparing for them.
no
No
yes, to keep funding the art education program.
no
Less costs for online classes
Some sort of way to inform students more so of what is required at each stage and what the costs are; a very thorough breakdown.
a sleep room.
none that I know of.
I've used advising, computing, health and writing services, so far. I'm not sure what other additional help I will need.
The extra fees should go towards paying for background checks that are mandatory in order to continue on in the education program.
not that I can think of!
More prep for in classroom activities as teachers.
I think that the advising situation needs to be monitored more closely so students get better advising. Honestly, at the moment, it's kind of half-assed and advisors and uninvested.
Reducing the cost of the edTPA fee, mentor teacher fee, and additional "education" fees.
No, thank you. The University has been very helpful.
I am pretty happy with the services offered at this time.
I'd like to not pay for 15 credit hours to be a student teacher.
No
Not really.
No
Optional slower discussions plus the other discussions to actually discuss the class
More scholarship opportunities
Required study sessions with the actual teacher

A project center where students could work on extra-curricular engineering projects would be great. This center would have basic tools needed since many students don't have access to tools since they live in the dorms or small apartments. It would be a great place to find help on projects and network as well as bounce ideas around.
Provide scholarships aimed at low income minority students.
No, the computer science department is very good at getting its students the necessary programs.
Success Curriculum lowered in rigor.
I want there to be an easier way to get involved with reasearch
More scholarships to help pay for college.
A better Architecutural Design professor would be nice
No. Just don't charge me more for the same education, outside of a reasonable +3%/yr increase to account for inflation.
No
No
Tutoring in computer science. There is none as far as I am aware and computer science is one of the more challenging degrees to acquire here.
Flat rate tuition for all four/five years.
No
Mentoring
More full-time professors in order to enhance the quality of teaching in classes. Most engineering professors are here strictly for research and are in general terrible professors.
Decrese in the use of high cost online programs, that do little to benefit students, and could be more cost effectively created in house as opposed to using publishers.
none
it is what it is
No
better advising and classes offered more frequently, it is hard to complete required courses if they are only offered once a year or once every three semesters
More jobs offered exclusively to students might be beneficial to students.
No.
In house online programs instead of publisher created ones that dont bennifit students to merit the cost.
more scholarships
No
no
Courses offered every semester. Instead of every 3 or every other.
I feel like there isnt much that is not currently offered that would help me be more prepared.
We need more tutor for Petroleum Engineering students
No. I want less services so itâ€™s cheaper so I can continue to go to college!
Not sure

There are already good resources online and good labs and great tutoring programs. Unless those need to be improved, I'm happy with the additional services.
Just more resources for internships
More free tutoring for 4000 classes, more accessibility, better qualification of the professors(because being a good researcher, or good professional knowledge doesn't always mean a good teacher)
No
No.
No
More upper level classes offered more frequently
More two screen computers and better teachers
Maybe more career services recruiting. That would be awesome
Better tutoring
More evening and online/distance classes. Maybe even MOOCs.
Non-shit computers
I would like to see more career specific programs. I believe my curriculum specifically could benefit from researching more tools engineers use in the real world, and provide better training per those tools.
More personalized tutoring
Note taking service such as those offered at University of Illinois Urbana-Champaign
Old tests from all professors at UW so that all students (not just the Fraternities and Sororities) can use to practice for exams.
None.
I hope that the other department would be more helpful not just for students in their department. For example, the engineering department is very helpful to me. However, I tried to reach out to Physics and Chemistry department about the double major or minor questions, and I don't have any responds from them.
No
Not at the moment.
Yes. More summer class options in my field of study.
How about multiple class offerings for classes such as CSC 2300? There's literally one professor at the entire university who teaches it and I'm currently planning on taking it elsewhere because of this.
no additional services, but upper division classes need to be offered every semester. especially for non-traditional students such as myself.
As a Chemical Engineer I would like to see more courses offered that deal with industrial process style classes opposed to theoretical Bioengineering type courses.
I don't know
Professional development series that teach professors how to teach instead of having students teach themselves the material.
Better teachers. Our faculty is great but many are poor teachers. They are accomplished and smart but have a hard time connecting to students.
no
Nope.

I would love to see the availability of better computing resources, basic workshops in programming and general engineering classes aimed at freshmen/sophomores to gear them to be better students.
Ensuring the advising program is ran by professionals that will not detour my 4 year plan
Availability of courses. Differential equation 2 has not been offered in many years and that is a very useful class.
Classes that are important to the curriculum should be offered every semester. I know plenty of professors who are only teaching one class a semester and not doing research that could teach a second class.
Specifically for Civil Engineering, is there anyway that we can quite messing around with this fall-only/spring-only mess? For a small additional fee, could we stop getting set behind by the VISTA stuff? I need to graduate eventually and having these once a year classes have become a serious landmine to navigate during advising.
DISCUSSION SECTIONS FOR UPPER LEVEL COURSES!!!!!!!!!!!!!!!!!!!!!!
university store textbook credits or subsidies for self-funded, low-income, non traditional students and veterans
Yes, a dedicated computer and table cleaning every night or a few times a week in the computer labs to reduce sickness and disease.
I have not had enough experience in this program to give a good opinion on this topic.
Better advising
Nope
Yes, incorporating a networking course in early undergraduate level courses so a college degree isn't wasted because one aspect of after college life was excluded
I think the MAC is overcrowded now my first semester it was a great place for help. Now there are so many people in there you can hardly get individual help.
N/A
Not being extorted by an institution whose purpose is supposed to be providing us education for an agreed upon price, not funding extraneous things with student money.
So far so good
If internationals could get 1 semester of in state tuition
I'd like to see personally tailored degrees. People ought to be able to study what they want, not what the big business (college) tells them they have to study. Get rid of the idea that people need to be well rounded to be successful. If I'm driving over a bridge designed by a structural engineer, the last thought on my mind is in regards to that engineers cultural awareness.
No
yes, please cut program funding for programs that are non-essential. The VISTA program has not helped me understand anything in my field or achieve any form of professional ability. also, it would be very helpful to have a campus transportation system that is reliable. the busses have proved to be unreliable and parking fees are outrageous.
Better Professors that actually know what they are doing would be nice.
more free food
Better tutoring for calculus
Yes if the professors were made to help students more.
More professors, hire more, and pay the existing ones more

My experience with advisors has been underwhelming. They are not up to date on the current degree requirements and will approve almost any schedule. They need to receive better training and more entice to advise. Maybe a reward system for the advisors that retain the most students. For the university to increase retention the experience needs to be more involved and streamlined. The current policy can be overwhelming and hard to understand.
No. Honestly, the University pays for a lot of "engineering" programs that are unused in engineering and it is most likely a waste of money.
The University should give professors a wage raise, because university is starting to have problems with professor retention. By increasing professor wages, overall morale will increase, thereby creating an environment more hospitable for everyone.
Chemistry not required for civil engineers
No.
No.
None
No
More investment in Technology
More job direction early on. Especially front end stuff
No
No.
Better advising and career services. I believe this campus has not post graduation support.
Library hours are a joke. how can you only be open for 4 hours on Saturday?
I would like to see more future class planning to help avoid having to work around a lot of conflicts.
I do not want to see any other offers because that would cost more.
No
No, which is why I'm not in support of the program fees.
no
More information on study abroad
I will not vote a yes or a no without being more well informed about the proposed fee.
Less teachers trying to screw students over
No
I think a more developed and better taught Chemistry lab. More tailored to lecture and correlated to learning that week. Students need help connecting these concepts for success. Currently except for TA's there is no connection without assessing it yourself.
Not at the moment.
More services to help with prep for exams. Those things are murderous.
For job supporting programs such as introducing companies and job opportunity.
Our degree program is robust, and we have a ton of support. I think UW is doing great.
How about teachers teaching the material that I'm tested on. Instead of me paying the university thousands of dollars to go else where to learn what is actually expected of me.

I would like to see more drilling engineering courses at UW and I would like the option to complete and online masters of engineering .
N/A
I would like to see more social events throughout my college to meet more engineers in the same situation as me.
More opportunities for hands on work accessible at the college.
Not currently
I would like to see more career services offered. Other than the job fair and a few career presentations throughout the semester, I have not found many promising avenues within the engineering college for me to land a job/internship in the summer or after graduation.
I would like to see the classes I need to graduate actually offered in a timely manner, instead of having to stay and wait around for them to be offered again. I would also like there to be a better system with advisors, since I am not the only person who's advisor didn't help them with classes to take, and is having to take a very heavy load to correct their mistakes.
No
No. I think there are many programs that are not being utilized fully already. Tau Beta Pi tutoring and many other tutoring services are available. I think the only thing that can be done is make these services more well known and advertised, but creating even more programs will probably be a waste of funding
better advising
Hire more staff so we don't fail because of one teacher teaching three of the hardest engineering courses you have at once. Not cool.
Nothing comes to mind.
N/A
The vending machines are AWESOME in the engineering building!!!
It would be nice to have more tutors--or at least TAs who are worth their salt and have at least a few hours of office hours per week. In Functional Programming, it's amazing--the professor has office hours and the TA does as well! In Algorithms and Data Structures, not so much--the TA doesn't have any office hours and is never in his office to help you if you stop in. Not only this, but he's unfamiliar with the course material. This isn't necessarily as reflective of him as it is that maybe there isn't enough incentive for him to have office hours if he isn't being paid to.
Having more help available would probably be the best--even if they're just a general tutor for all classes up to and including Algorithms and Data Structures. Obviously this is just a computer science perspective, but I believe more people would be better than more equipment.
More tutoring programs
Maybe an increase in pay for the tutor services allowing them to be more willing to help and increase the likelihood that they will be of better service.
Add a step tutor for intro engineering classes
No
Better advising, better printers
Id like a lot of help finding jobs and internship and making myself attractive to them. Also good career advise.
Make tutoring more widely available. More tutors and additional times. At least 30 minutes for a session.
I always wanted to take a CAD class, now there is a solid works entry engineering class so that was taken care of.

one on one tutoring
I would be ok with a reduced fee/credit hour system. Perhaps \$15 per credit hour.
Not Sure.
I wish to see that more classes will be offered in both semesters not just spring or fall only.
I would like to see better physics tutoring because the quality of my physics courses so far has been far below average.
Mass firing of many incompetent department heads.
Better Lab equipment
Married student housing that is affordable
Better updated computers and software for the CPE and Encana Labs. They are slow and gross. The new software should be cad software that companies actually use rather than MatLab.
No.
I think step tutoring is a great idea, however every time I have been there I did not get the help I needed. So maybe more one on one help in the engineering department.
I think our faculty provides excellent services. I feel like we already have so many wonderful services out there to help us, but not all are utilized.
Having more study rooms/places to study open past midnight because a lot of people stay up very late doing homework.
Better availability of financial aid to "average" students attending the University of Wyoming. Many scholarships at UW go unclaimed, but that is often due to requirements not being met. Also, better list of companies at job fairs. The companies that attend UW job fairs are typically local companies with a relatively small area of operation.
Less on sports more in academia. How good is Harvard's football team? Or MIT's? Don't know? Exactly
Nothing to mention.
A fully staffed faculty. When you lose faculty members and your student population is growing its laughable to expect students to see a need for raising fees. It would also be nice to see the library return to reasonable hours on the weekend and at night. Why is it I can go to a football game but if I want to check out a book I have to wait till one in the afternoon. It raises the question of what is the priorities of this school paying a football coach a million a year or becoming a tier one University. On the current pace its headed in the wrong direction. I was made aware the Tuesday afternoon before classes started that one of my classes was no longer being offered due to a faculty member quitting. Has the faculty member been replaced (the answer is no). So lets start by first hiring enough teachers to offer a fully staffed mechanical engineering department.
Potential scholarships based upon class fees and workload presented. This would benefit those taking harder classes who have to pay more rather than funding blow off classes with an easy a for GPA.
Focused advising and career discussions with an apt person/faculty/staff on campus.
Yes, more scholarships and very little raise in fees over the years. More summer classes in the college of engineering and offering classes during the fall and spring semester.
No
No

No there is no need to increase the number of services. It would just increase the cost of what students have to pay. What the University has offered in the last 10 years seems to be producing quality graduates. So why add services that aren't necessary. There are probably some that could be taken away and virtually no one would notice. If the university is really looking to cut cost, it should look at those areas which are virtually unused instead of charging students more.
no
Can't think of any at the moment.
Nope
I would love to have free printing for things in such program of matmatica and matlab.
Not that I can think of at the moment.
More job postings or having companies/organizations come to the University for job recruiting.
No
voting on where money is applied by students
Yes, I think implementing what specific jobs align with your major from the beginning of your freshman year would be very insightful. I am the type of person who wants to know specifics of my future, so knowing which jobs align with my major will give me the time to adjust according to my preferences with classes overtime.
I would like to be trained in how to read my degree evaluation.
More volunteer opportunities.
Free food. College is expensive. Two meals a day is pretty average for me during semesters.
None.
More internship/career services.
Additional scholarship programs
No
More field work in the classes and research opportunities with professors in the Haub School.
I would like to see a mentorship program involving people already in my field.
I'm struggling paying for my tuition because I'm an International Student. However, having \$26 pay for fees is not affecting me a lot on the scale of more than \$10K for each semester. I need help for helping me cover that so I could graduate in May without any debt if possible.
N/A
Help for transfer students who can't go straight into the program or even be accepted
No
n/a
Some additional services I would like to see would be better student advising, and more programs and support for non-traditional students that are only attending part time.
Standardized test prep
Dental school application/interview prep
In K&H, opportunities to shadow or intern earlier in the program, or before it starts.

ARE YOU FUCKING KIDDING ME???????
Na
I think that an update of Corbett would be great. Although it has a great kinesiology program the building is hard to accommodate some of our classes and projects we want to work on.
Free lunch everyday if you expect me to pay that much
no
I would like to see more classes for things such as CPR certification, if these are already offered in abundance then I have a hard time finding these opportunities
More opportunities for scholarships for non-traditional students. Honestly I'm paying for college with loans and that still isn't enough
Not at this time. The only thing I would like to see the College of Health sciences to look into is the introduction of a Physical Therapy Program. Creating more post-professional programs is a better way to bring in more money and help students reach their academic goals.
Tutoring and job help
Not at the moment
No
N/A
Books included in fees even if it raised more per credit hour
Not really
The only additional services I would like to see offered would be a bunch of volunteer programs to further your knowledge.
N/A
Being able to declare pre-med as a undergrad degree so that I know what classes to take in preparation for med school.
Advising centers in the colleges. I feel that some faculty are extremely busy and advising week doesn't allow enough time to really delve into our schedules. A little extra advising would be wonderful.
No
A new Corbett building.
no
Not that I can really think of.
Increase payment options for instance only paying for the things I use and not everything regardless if I use it or not it's wasted money if I'm paying for things I cannot attend or take advantage of due to classes or homework or anything else
Not sure yet, as I'm only a freshman. Myself and another student formed a study/tutoring group on our own time that has grown to 15 members, since there are currently no tutoring options in our department (at least, none that I'm aware of).
Cheaper laundry
Reasonable tuition to in-state students and more scholarship opportunities.
Nursing program should pay for our uniforms
to be able to be declared pre-nursing instead of having to be undeclared because you didn't make the freshman cut.
no

Not that i can think of
Nope.
I think there are newer online resources that would benefit nursing students in terms of success during the program.
None.
I graduate this fall. But an increase in pre-medical based classes through the UW-CC program is definitely necessary
Not currently
More FYs to choose from that fit under kinesiology
I don't have much knowledge about what is offered in my program
N/A
I think since BLS is mandatory, someone from the nursing faculty should become a BLS instructor and they can have a course the day before classes start at no extra cost to students.
Allowing more people into the majors and the specific programs.
No
Basic supplies, such as staplers are never available in the Kinesiology building. In addition, the quality of basic advising should be improved. It would be nice to actually see the implementation of the proposed fees going towards things that benefit the students and/or learning environment.
I think access to more updated facilities and tools for the K&H majors: the facility we have now is not easily maneuverable.
Athletic training program
More advising availability and resources for completing degrees on time.
Job interview skill development
Resume building
better equipment
I like to see more hand on experience.
more scholarships
Just more out of campus opportunity or connections to build my degree to be more wholesome and well-rounded.
More elective options for SOWK, PSYC, and CNSL
Better instructors. I've had a couple bad ones.
Minor counseling
I think the University should focus on hiring quality staff that won't complain about current staff or lack there of and stop cheating us out of a quality education. The BSW program is one of the lowest ranked BSW programs in the nation. That's embarrassing!!
None that I can think of
N/A
Not that I am aware of
An increase in acceptance within the BRAND program.
More available study rooms

Free tuition?
N/A
GRE prep classes, Grad school applications help workshop
no
Better advising. My advisor is a professor and she is great at that but we need a separate advising department with people who actual understand the university and program requirements.
More available to pre pharmacy students so you know more people in your major. This would give you a better support system and not feel so alone in your major. I wold be willing to pay a fee for that program.
more scholarship opportunites for non-traditional students, or GPA based regardless of status
No
continual upgrades of simulation technology
I think the University of Wyoming offers so many services already for students, so I do not think additional services are needed for my degree program.
Not at this time
Post graduate test preparation for NCLEX
More financial based scholarships
I can not think of any right now!
I can't think of any at this time.
None
More tutoring opportunities. You can really only find free tutoring for general classes, even though I bet a lot people, similar to myself, are struggling and can't find a tutor for that subject (for ex. Energy and Society)
I donâ€™t know
None that I can think of right now.
No
Nothing I can think of.
Not me particularly as I am a non-traditional student. I do think if the University is serious about increasing graduation rates and career readiness they should funnel money from athletics and offer all students the same level of tutoring and mentoring that is offered to student athletes. I think this is particularly important for Wyoming students coming from small towns/high schools or transferring from community colleges. We put so much effort into the student athletes and expect the rest of the students to handle things on their own. It is time to put the education of all first!
Are there any additional services you would like to see offered to help you complete your degree program?
I donâ€™t know
N/a
Complimentary cookies.
Not sure

More one on one with my advisor
No.
nope
I think more guidance would be nice. I am a transfer student and i have had very little assistance
No
Career advising
More advising for undeclared students. It is very stressful to pick a major if you haven't already. Maybe group talks about how to pick one?
NA
things that help us narrow down what we want to do
Yes. I think undeclared students should be given career counselor sessions before any scheduling occurs.
Maybe helping those who cannot afford it.
Low income help from the university
within the first year or two of college Getting to see people with the degree doing their job and talking about it. That way I can have a more competent understanding of what the job really is.
Yes, free education.
More advising services for outreach students
I have no idea what these even are?
N/A
Some advisers are abysmal. Better advising for all students would be helpful.
N/A
N/A
Not that i can think of!
none
I dont really know what they are so I couldn't say
No.
I am a non-degree-seeking post-baccalaureate student, so I cannot weigh-in here.
PS: instead of adding fees, raise the tuition slightly. You're still low balling the shit out everyone else.
More tutors for higher level classes
It would ne great to have a learning event like a mock disaster drill or a major cultural event like a Pow Wow on campus.
