

The Computer Science Department is offering a 1 credit internship course through the Laramie Robotics Club. The internship entails being a mentor and attending the 2 hour LRC meetings every week, Thursdays from 4-6pm. Mentors help guide and teach middle and high school students on various STEM related activities and concepts. They are expected to work with the students on different programming or robotics activities such as simple computer graphics, game design, or robot navigation. In addition to the weekly meetings, attendance will be required at any information session (3-4 per term) that will be aimed at giving mentors familiarity with the different LRC programming or robotic platforms. For the internship, no previous experience with programming or working with middle and high school students is needed. The course is listed as CRN 17120, and you can contact Roby Velez (rvelez@uwyo.edu) for more information or approval for registration.
