Assessing & Treating Childhood Apraxia of Speech & Severe Speech Sound Disorders

Christina Gildersleeve-Neumann, PhD., CCC-SLP

Dr. Gildersleeve-Neumann is Professor and Chair of Speech and Hearing Sciences at Portland State University in Portland, Oregon. Her research and clinical areas of interest and expertise are typical and atypical speech development in children from birth to 6, with an emphasis on and treatment efficacy for severe speech sound disorders and childhood apraxia of speech and typical and atypical bilingual speech development and disorder. She has numerous publications on these topics and has presented her research and clinical findings in national and international research conferences and workshops.

Friday, June 24, 2016, at the UW-Hilton Conference Center, Laramie, WY

This course is available for 0.6 ASHA CEUs (Intermediate level, Professional area) and 0.5 PTSB credit.

Course Description: Children with childhood apraxia of speech (CAS) and severe speech sound disorders (SSDs) can present substantial challenges for the SLP. However, there are ways to increase effectiveness in assessing and treating the speech of these children. To do so, this workshop will expand on the understanding of speech development, integrating motor, somatosensory, auditory, linguistic and socio-cultural information. A thorough assessment protocol for differentiating CAS from non-CAS SSDs and aiding in intervention planning will be provided. Current evidence-based models that are effective in treating CAS and motor-based speech sound disorders will be presented, as well as ways to adapt treatment for the needs of individual children. We will explore motor learning principles as a foundation for treating motor-based. Information on assessing and treating bilingual children with CAS and non-CAS severe speech sound disorders will be provided.
