Staphylococcus epidermidis bacteria, seeks fellow cocci who likes clustering, and doesn't mind the "no-tan" slightly pasty colony look. Preference for fellow nature-lover; have a thing for helping out the flora and fauna. If you turn blue when asked if you are Gram-positive, we may be destined to be together! Call me!

~~Posted November 29th 2007~~

Seeking handsome, active, catalase-positive bacterium who can teach resistance to antibiotics. Turned on by lactic acid, so fermentation is a plus!

Posted July 23rd 2007

Facultative Anaerobe looking for love! Inhabitants of epidermis- skin area preferred; not a fan of living in many

other climates. Willingness to inhabitate pathogenic devices in hospital environments is nice.

~~Posted February 5th 2008~~

Looking for casual romance in area-code 130; must be Gram-positive- I like that peptidoglycan layer thick baby! Also a requirement: tested oxidase-negative to be safe; although acid-fast and endospore- positive stains are just fine ;).

~~Posted September 6th 2007~~

Largely non- pathogenic, white bacteria seeking long- term mate who can tolerate oxygen. Although round and somewhat small, will rock your socks off with ability to form S-layer from teichoic acid to protect against phagocytosis!
