

Graduate Opportunities in Invasive Plant Ecology and Management

Invasive Species Ecology

Restoration of Weed- infested Rangelands

Attend classes and work
on research in beautiful
Laramie, Wyoming. A
small town close to great
outdoor recreation!

Would you like to pursue a graduate degree (M.S. or Ph.D.) working to increase our understanding of the dynamics of invasive weed management in rangeland ecosystems? Research opportunities in our lab include development of weed management strategies to improve reclamation success, ecology and management of annual weeds in high-elevation systems, mechanisms leading to native plant persistence in weed invasions and more. You will also have ample opportunities to participate in extension and outreach activities in addition to your own research.
