

PRE-MEDICINE (MD / DO / Podiatry)

Competency Development: The Guiding Principle

Medical schools are looking for well-rounded individuals who can demonstrate key competencies!

Many of the experiences listed below will give you opportunities for growth in the competencies listed at the AAMC website:

<https://students-residents.staging.aamc.org/applying-medical-school/article/core-competencies/>

High-Value Experiences

Your pre-health advisor will be happy to discuss service & leadership opportunities that would connect well with your particular passions and values!

1. **Get involved**

- a. Involvement in on-campus Recognized Student Organizations (RSOs) or work as a teaching assistant, a lab / learning assistant, or a supplemental instructor can provide you with **leadership and communication** experience that medical schools are looking for.
- b. Developing quality relationships with off-campus, non-profit organizations and the people they serve will give you invaluable **community service** experience. Medical schools are looking for people with a service orientation, so it is better to establish longer service relationships than one-time service events with multiple organizations can provide.

2. **Understand what this career entails**

- a. Pre-med students would benefit from an exploration of the following **ways to practice medicine**: allopathic medicine (MD), osteopathic medicine (DO), and podiatry (DPM). Contact the pre-health advising office to find out more about these career possibilities.
- b. **Shadowing** is a crucial component in your discernment process regarding whether you should pursue this career. Medical schools want to see that you have demonstrated sustained interest in this career and that you know what you are getting into. Shadow several physicians in multiple areas of medicine, since you will need to rotate through many specializations in medical school. Questions about the process? Talk to your pre-health advisor!
- c. **Experience in health care** can take a variety of forms. Medical schools expect that their applicants have exposure to the health care field. You may find it useful to gain experience as a volunteer or employee at a medical facility.
- d. Physicians need to stay up-to-date about issues related to health care in the US and the world, including the way the media is discussing health care. They also need to know what is going on in the world in general. Although pre-med students are not expected to have all the answers, you can begin to **read and stay informed in the field** in order to maintain essential knowledge as you move forward in your journey.

3. **Conduct research.** Since 80 to 97% of those who matriculate into medical schools have had some experience in research (bench/lab research, social sciences research, kinesiology research, engineering research, etc.), you should consider this an expectation. See the “Events and Opportunities” pages on our website (<http://www.uwyo.edu/preprof/events-and-opportunities/>) and talk to a pre-health advisor to discover possible research opportunities.

4. **Develop a strong academic record.** Most individuals who are accepted to medical school have a GPA that falls within the 3.5 to 4.0 range. Medical schools also place high value on applicants’ BCPM GPA (Biological, Chemical, and Physical Sciences, plus Math), so pay attention to this during your time here at UW. Talk to a pre-health advisor about how to keep track of your various GPAs. Typical prerequisite courses for medical school are listed on the next page.

5. **Develop relationships with professionals.** Physicians, faculty, and work/volunteer supervisors can help you open doors to exciting new experiences, but they will also hopefully get to know you well enough to speak to your competencies in letters of evaluation for your medical school application.

Meet Early and Often with a Pre-Health Advisor!

Pre-Health Advising Office

hsadvise@uwyo.edu

307-766-3878

Health Sciences Room 110

Stay Informed! Sign up to join our Pre-Professional Health ListServ, so you can stay informed about various opportunities, workshops, and information that our office sends out! <https://lists.uwyo.edu/mailman/listinfo/pre-prof>

USEFUL TIP: Create an e-mail inbox rule to send our ListServ messages into a “pre-health” folder to read at regular intervals.

Revised 05/29/2019

Academic Preparation

WHICH MAJOR SHOULD I CHOOSE?

You can major in ANYTHING! Medical schools do not care what you major in as long as you take their prerequisite courses. Most medical schools require completion of a bachelor's degree before matriculation into their school.

WHAT COURSES ARE TYPICALLY REQUIRED or RECOMMENDED?

Note 1: Specific medical schools may or may not require all of these courses before application or matriculation. Schools may also require additional courses as entry requirements. **You are responsible for making sure that you are on track to fulfill any specific school's requirements prior to application.** Talk to your pre-health advisor about things to keep in mind for school selection.

MCAT section: Critical Analysis and Reasoning Skills

- **MATH 1405** (Trigonometry) is required, and **MATH 2200** (Calculus I) is strongly recommended (& required by some UW depts.).
- A statistics course (**STAT 2050 OR STAT 2070**) is also strongly recommended (& required by many UW departments).
- Additional recommendations:
 - High-level reading: Regularly read a variety of challenging material (beyond the material required in your courses).
 - Any other course that requires rigorous thinking, extensive and challenging reading, and problem-solving skills.

MCAT sections: Biological and Biochemical Foundations of Living Systems AND

Chemical and Physical Foundations of Biological Systems

- At least 2.5 years (5 semesters) of chemistry
 - Inorganic chemistry: **CHEM 1020 & CHEM 1030** (or CHEM 1050 & CHEM 1060)
 - Organic chemistry: **CHEM 2420 & CHEM 2440**
 - At least 1 semester of Biochemistry / Biological Chemistry (The pre-med/MCAT required course is underlined for each biochemistry pathway listed below.):
 - **Physiology majors (other majors by choice):** MOLB 3610 (and MOLB 4100 recommended but not required)
 - **Molecular biology and Microbiology majors (other majors by choice):** MOLB 4600 (and MOLB 4610 recommended but not required (required for MOLB/MICR majors at UW))
 - **Chemistry majors (other majors by choice):** CHEM 4400
- At least 1 full year of biology - **LIFE 1010** and **MICR 2021** (preferred for MCAT prep) or LIFE 2022
- One full year of physics - **PHYS 1110 & PHYS 1120** (or PHYS 1210 & 1220 or PHYS 1310 & 1320)

LAB REQUIREMENT (Chemistry/Biology/Physics)

Medical schools require on-campus, lab-based courses for all science courses listed here (except MOLB 3610 / CHEM 4400, which most medical schools allow to be taken online). Medical schools DO NOT usually accept AP credit for these sciences!

MCAT section: Psychological, Social and Biological Foundations of Behavior

- At least one semester of psychology, starting with **PSYC 1000**
- At least one semester of sociology, starting with **SOC 1000**
- Additional recommendations: University Studies Human Culture (USP-H) courses or courses in "A&S Core Diversity in the U.S." and "A&S Core Global Awareness."

How do I prepare for the MCAT?

Step # 1: Master the content in the required courses listed on this page!
Talk to a pre-health advisor for other ideas!

UW Course Prerequisites: To understand the prerequisites for any UW courses listed above, consult the University Catalog:
http://www.uwyo.edu/registrar/university_catalog/crsdept.html

Growth Mindset: Taking additional challenging courses that interest you will reinforce your knowledge. Selecting a course based on how "easy" it is will not result in the intellectual growth needed to do well on the MCAT or to become a physician.

ADDITIONAL COURSEWORK TO PREPARE WELL FOR MEDICAL SCHOOL

According to many medical schools, students who take coursework in the following areas tend to do better in the rigorous coursework they encounter at medical school.

Human Systems Physiology (ZOO 3115) **Genetics** (LIFE 3050)
Cell Biology (LIFE 3600) **Immunology** (MOLB 4400)
Any of the 4000-level **biochemistry courses** listed above
