RECLAMATION 101: COMPONENTS OF SUCCESSFUL RECLAMATION

RECLAMATION PLANNING

Wyoming Reclamation & Restoration Center

WORKING WITH LAND, AIR, WATER & WILDLIFE

Pete Stahl

WYOMING RECLAMATION AND RESTORATION CENTER
NATURAL RESOURCE DEVELOPMENT PROCESS

1. LOCATE THE RESOURCE

2. Obtain lease from rights holder
   - Land Owner
   - Government (state or federal)

3. Apply for Resource Development Permit
   - Baseline studies of environmental conditions
   - Approval of resource development plan
     (including reclamation plan)
   - Post Reclamation Bond (surface mining)

4. Begin resource extraction followed by reclamation
   - periodic regulatory inspections

5. Reclamation management, monitoring, and evaluation period
   - approval and bond release
RECLAMATION PLANNING CONSISTS OF 2 MAIN ASPECTS:

1) Pre-disturbance Site Assessment
2) Development of a scheme for site remediation

PREDISTURBANCE SITE ASSESSMENT
- Get to know what you are dealing with
- Reclamation Plan should be site specific
- Limitations to site reclamation?

RECLAMATION PLAN
- Maximize efficiency, Minimize problems and costs
- Good scheduling, Proper equipment, Necessary materials, Appropriate methods
- Successful outcome
BLM Wyoming Reclamation Policy:

A reclamation plan shall be developed for all surface disturbing activities and will become part of the proposed action in the NEPA document.

The reclamation plan shall address short term stabilization to facilitate long Term reclamation.

Reclamation Goals:

1. Short term goal: Immediately stabilize disturbed area and provide conditions necessary to achieve long term goals.

2. Long Term Goals: Facilitate eventual ecosystem reconstruction to maintain a safe and stable landscape and meet the desired outcomes of the land use plan.
Successful Reclamation Puzzle
Reclaimed/Restored landscape in central Wyoming
PRE-DISTURBANCE SITE ASSESSMENT
PREDISTURBANCE SITE ASSESSMENT

Location
Land and Mineral Ownership
Land Use Status
Climate (i.e., precipitation, growing season)
History, Archeology, etc.
Geology
Air Quality
Hydrology (surface and subsurface)

Soils Inventory
- distribution of soil types
- identification of potentials problems

Vegetation Inventory
- characterization of vegetation types
- production, cover, density
- species composition, diversity

Wildlife and Habitat
OBJECTIVES OF SITE ASSESSMENT

- Characterize site for future reference
- Estimate costs of site development and reclamation
- Determine site reclamation potential
  - Selection of reference area
  - Determine soil salvage depth
- Identification of areas with Limited Reclamation Potential
- Identification of potential problems
  - Shallow soils
  - Critical wildlife habitat
  - Threatened or endangered species
Soil Mapping or Survey Information (NRCS)
Soil types and distribution

Soil Analyses from samples collected on site
Texture, pH, EC, SAR, Organic Matter Content

Depth of suitable plant growth material
(soil salvage depth)
Avoid heavy clay materials, salty horizons, sodic horizons, and high carbonate horizons
IMPORTANT VEGETATION INFORMATION

Cover
Vegetative Cover, Total Ground Cover, Bare Ground

Production
Total production, Herbaceous Production by Species

Density and Distribution
Full shrubs, Sub-shrubs and Trees

Species Diversity

Species Composition

NRCS Ecological Site Descriptions
RECLAMATION PLAN

Topography Reconstruction
Topography, stream channels, drainages, impoundments

Topsoil Salvage, Storage and Replacement
approach and schedule
depth of salvage
stockpiling method
Tillage
equipment
soil amendments

Revegetation
approach and schedule
plant species selection (seed mix)
seedbed preparation
Seed sources
seeding methods

Erosion Control Practices
Weed Control Plan
Site Monitoring Schedule
Seed Quality:

Cultivars or locally adapted ecotypes?

From whom should they be purchased?

When should they be purchased?

Date of harvest?

Weed content?

Contingency?
RECLAMATION PLAN

- Seed Quality
- Mulch
- Trained Operators
- Mother Nature
- Topsoil/Suitable Subsoil Texture
- Erosion Control
- Seed
- Mix
- Selection
- Subsoil Preparation
- Seedbed Preparation
- Topography Construction
- Proper/Seeding Method
- Equipment
- Grazing Management
- Timing of Seeding
- Topsoil/Suitable Subsoil Chemistry
- Fertilization/Soil Amendment
Mulch:

Is it needed?

What kind?

Composted?

How much?

How applied? When?

Other soil amendments?
