Empowerment-based Nutrition Education Series in a Peer Support Group Setting for Type 2 Diabetes
Alexandra Gobble • RUOP iii-3 • 2017 • University of Washington School of Medicine

Hypothesis
Implementation of empowerment-based nutrition education sessions in a diabetes support group setting will increase participants' ability to manage their diabetes through lifestyle changes and weight loss.

Background
- Kemmerer is a town of 2,600 people in south Lincoln County, Wyoming
- County diabetes rate in 2015 was 8.6% compared to the state’s 7.6%
- 90% of newly diagnosed type 2 diabetics are overweight or obese
- The area’s main employers are natural resource industries, where jobs do not allow much physical activity
- Kemmerer houses one small grocery store, but many residents choose to shop in a larger town about an hour away
- At ~7,000 feet in elevation, Kemmerer experiences long winters not realistic for regular, year-long outdoor exercise
- The Lincoln County Public Health Nurse (PHN) in Kemmerer hosts a diabetes support group

Community Health Project Plan
- A four-topic series of presentations
  - Basic nutrition and macronutrients
  - Weight loss and management
  - Portion control
  - The role of support of others
- Presentations will be given by Lynn Rogers, PHN
- Included mediated motivational interviewing-type group discussions
- Focus on big picture information with examples
- Mini inventory quizzes as a quantitative benchmark for information
- Information on outside resources
- Presented the series to Lynn Rogers, PHN so she can deliver it in the future

Deliverables
- Literature review
- Creation of a community desired nutrition education series
- Presentations included:
  - Mini-inventory quizzes for the beginning of each session
  - PowerPoints with information on each topic
  - A “script” for each presentation
  - Spaced discussions for participants with scripts for examples
  - Information on other resources
- Presented the series to Lynn Rogers, PHN so she can deliver it in the future

Next Steps
- The series will start later this year and will be given by Lynn Rogers, PHN
- Project will be revisited every year to improve the program

Acknowledgments
A special thanks to Lynn Rogers for providing advisement on what the community of Kemmerer really needed and wanted, giving feedback on types of community interventions, sharing knowledge of diabetes and the people of Kemmerer, and for taking on the implementation step of this project. Thanks to everyone involved in South Lincoln County Diabetes Support Group for their willingness to meet, learn, and share their experiences.

Literature Review
- Focused search to find information on:
  - Rural communities
  - Peer diabetes support group settings
  - How to present information on lifestyle in diabetes
- Found effective methods
  - Empowerment-based learning
  - Using ideas similar to motivational interviewing
  - Present relevant information for making informed decisions
  - Group peer discussions
  - Topics of relevance
  - Revisiting these topics at least once a year to reinforce information
  - Mini inventory quizzes as a quantitative benchmark for information
  - Providing information on outside resources for use individually
- Results for similar programs in rural settings included:
  - Lower HbA1c values
  - Lower weight
  - Confidence in making nutritional and lifestyle choices
