WyoCloud Security Approach

WyoCloud has chosen to utilize an open security approach that is standardized for most UW employees.

"What Are the Benefits of the Security Approach?"

- Provides departments and colleges the ability to determine how best to divide job responsibilities within their area
- Offers more flexibility to allow for cross-training
- Facilitates an easier transition when someone transfers departments or when a department is restructured

Training

Training will be required for all employees to access to WyoCloud due to our open security approach.

System Access

- All employees will have access to submit expense reports and create requisitions.

- Users with fiscal responsibilities will have elevated privileges with additional required training.
