Requirements for Steel and Iron

This contract requires the use of domestic iron and steel in the permanent components of a project. "Domestic" means all manufacturing processes occur within the United States. Such processes include, but are not limited to, rolling, extruding, machining, bending, grinding, drilling, and coating or similar processes to manufacture or modify the physical properties or chemical composition of iron or steel. Coatings include any protective or value-enhancing process. The City will, however, accept:

1. Foreign iron or steel components whose total combined value, including the cost of delivery to the project, does not exceed 0.1 percent of the total contract amount, or \$2,500, whichever is greater.
2. The use of the following non-domestic raw materials: scrap, pig iron, and processed, pelletized, and reduced iron ore.
3. Non-domestic items that are used temporarily then abandoned in place at the contractor's convenience.

For iron and steel components, obtain from the manufacturer and provide to the engineer a material test report or certification that states clearly the country of manufacture. Include two
