Instructor
Mike Robinson:
Mr. Robinson has more than 30 years’ experience across the country in the heavy civil industry, working for a large state agency, as a contractor and materials producer, and as a consultant. His primary focus is flexible pavements and aggregate materials including pavement design, quality management, troubleshooting, maintenance and rehabilitation techniques, constructability reviews and value engineering, and construction claims support. He is a graduate of the University of Wyoming, and is active in local and national pavement and industry associations, and Transportation Research Board standing committees, and is a member of the Association of Asphalt Paving Technologists. He is a registered Civil Engineer in Wyoming, Nevada, California, and Arizona. More information can be found on his website: MikeRobinsonLLC.com.

Overview
This course will provide a comprehensive overview of the various maintenance and rehabilitations techniques for asphalt pavements. The techniques will include effective treatments such as thin asphalt overlay, cold in place recycling, and full depth recycling. There will be also discussions about the effectiveness of combining various treatments based on the conditions of pavements. The important considerations for selecting and applying the various treatments will be discussed. Some time will be spent discussing opportunities for optimizing materials and projects.

Who should attend?
This workshop should be attended by city and county engineers, consultants, WYDOT personnel, street maintenance supervisors, construction technicians, maintenance crew leaders, and street maintenance workers.

Agenda
7:30  Registration
8:00  Presentation Begins
9:30  Break
