Tree Assessment Practice 3:45-4:30

Insect Pests—Six legged creatures eating leaves or boring into trees can be hard to figure out. . Learn to spot them or signs/symptoms of them, how they live, and what to do to manage them.

Abiotic Disorders—Not all that plagues plants is living; sometimes the plant's worst enemy is environmental, nutritional, or accidental. Learn how to spot the difference between disease and disorder in this look at the non-living causes of plant problems, plus an overview of nutrients and how they work in the plants.

Diseases—When fungi and bacteria attack our trees, they can be worrisome. We'll talk about some of the more common tree diseases and management strategies.

Assessing A Tree—How to look at a tree to assess and potential problems.
