

Mullen Wildfire Reclamation 2021

Native Grass Seed Mix

<u>Specie</u>	<u>Preferred Cultivar (if available)</u>	<u>PLS Lbs/acre</u>
Canby Bluegrass	Canbar	.10
Mountain Brome	Garnet	1.75
Thickspike Wheatgrass	Critana	.75
Bluebunch Wheatgrass	Goldar	1.5
Bottlebrush Squirreltail	Sand Hollow	.25
Slender Wheatgrass	Pryor	1.5
Prairie Junegrass	common	.10
TOTAL PLS POUNDS PER ACRE		5.95

This mix is calculated for drill seeding. Seed should not exceed ½"-3/4" depth in soil. If broadcast, rates should be doubled. In areas of steeper slopes, rates should also be doubled (>15% slope). If it is a critical area, prone to erosion or marginal soils, rates can go up to 4x the stated amount.

Seed needs to be ordered in PLS (Pure Live Seed) pounds per acre, which accounts for the purity and germination percentage of each specie. The bulk pounds received will be higher than the PLS. The species in the mix can be mixed at the seed supplier. Due to the long awns found on many native seeds, it is important that the grass drill used will accommodate these species (proper picker wheels and agitator in the seed box).
