

# Spring Weed Control

Jenna Meeks, Goshen County Weed & Pest

BARNYARDS  
& BACKYARDS  
*Live!!!*

# Must ask questions

## WHERE IS IT?

Lawn

Buildings, sheds

Driveway

Pasture

## WHAT IS IT?

Grass or broadleaf

Annual or perennial

Time of year

## HOW MUCH IS THERE?

Herbicide

Mechanical

Cost

# Calibrate

Do you really want to know the  
cost of not calibrating?

# Application Vexation

## ● IS THIS PRODUCT STILL GOOD?

Did it freeze? Is it old? DON'T just give an extra "glug," read the SDS. Most products just need brought to ambient temperature and a shake.

## ● WHY ISN'T THE PLANT DEAD YET?

Most herbicides are systemic. They need the plant to be "growing" to move the product. Give it at least a week of hot weather, longer if cooler.

## ● WHEN IS THE BEST TIME TO SPRAY?

Sleep in! For the first few hours after dawn, plants will be covered in dew. A dry, non-stressed plant will uptake herbicide most efficiently.

## ● DO I ADD WATER? HOW MUCH?

There is a big difference between ready-to-use (RTU) and concentrate products. How much concentrate to add depends on sprayer calibration.

## WEAR PPE

NO latex gloves, flip flops, or shorts.  
Laundry clothing appropriately.

## CLEAN YOUR SPRAYER

Chemicals can be hard on tubing, filters,  
etc. Rinse with approved cleaner.

## BEWARE OF FORUMS

A "homemade," "organic," "less toxic"  
formula from random.com isn't your friend.
