Etiquette Tip of the Week: One Recruiter's Wisdom By Callista Could

What if, in an interview, you don't know the answer to an employer's question? Do you waffle? Make something up? Create a diversion? A tech recruiter said, "I look for honesty. If you don't know the answer to a question, don't try to talk your way around it. If I came up with the question, I know the subject and you can't fool me." He added, "It's better to admit what you don't know and show an interest in filling the gaps in your knowledge." Honesty means not exaggerating on your resume to begin with. This is a big problem in tech, when people claim skills they don't have. So much so, that organizations often put applicants through testing to prove their skills. It's not just technical knowledge. Two years of high school Spanish doesn't necessarily translate to "fluent in Spanish." "Admitting you don't know, shows humility and candor," said the tech recruiter. "I can't train you to be honest. But I can train you in everything else."
