

## Richard Resler-Mutter

Major:	Undeclared—Business
Hometown:	Cheyenne, Wyoming
Goal after College	to start a 100% renewable crypto mining operation or create a blockchain solution to solve a modern world problem

### Excerpt from Essay

Multiple experiences so far have been influential in my thinking of college. In my blockchain class, we are currently one of the only universities mining bitcoins with the bitcoin mining club, multiple firms and banks have come into the class offering internships for graduating students. These opportunities are huge learning experiences that can be taken into a career because of the previous experience gained from said internship. I am a very social person and seeing all these networking possibilities truly show me how vast the campus is and how many opportunities are available now and in the future.

My future is looking very bright because of attending UW. The amount of people I've met and things I've learned about are incredible to me. This is just my first year as well, I cannot even begin to fathom what else is in store if I stay all 4 years and major in entrepreneurship with a minor in blockchain. My professor has said multiple times we are the in the right place at the right time, and I whole heartedly believe that my blockchain knowledge now will take me so incredibly far in the future and help me escape the system by becoming financially free.

My biggest goals after college are to start a 100% re-

newable crypto mining operation or create a blockchain solution to solve a modern world problem. I know those two goals are going to be exceedingly hard to achieve but I know I can do it if I position myself correctly and find out where the money flows. Financial freedom is the only way out of this world, life is meant for living, not working the 9-5. The faster I can achieve this, the faster I can also help the people around me.
