SECTION OF WILDERNESS AND ENVIRONMENTAL MEDICINE
DEPARTMENT OF EMERGENCY MEDICINE

Dear Future Health Care Professional,

A quick reminder that the **deadline for both need-based scholarship applications and early bird discount (save \$150!) is coming up Oct. 31** for our January Colorado-based pre-med/health emergency and wilderness medicine class.

For more information about this and our other classes, and many more opportunities for undergrads and recent grads, please check out [our offerings!](#).

Benefits of these classes include:

- Lectures, labs, and simulations, **taught by School of Medicine faculty**, to give undergrad health profession students and recent grads the skills and knowledge to deal with real-world austere medicine situations.
- **Health professions admission and career advice.** For students on the fence an honest look at the process and professions.
- Students completing the classes **earn certificates** in Wilderness First Responder, CPR, Stop the Bleed, and for Costa Rica classes, Global Health.
- **Need-based scholarships**, covering 100% of our fees, and optional academic credit are offered for US-based classes.
- **Spectacular locales (Costa Rica, Colorado, and California)** at which you'll have the opportunity, depending on the setting, to participate in **adventure activities** including hiking, rock climbing, campfires, whitewater rafting, natural history tours, swimming, and more.
- Flexible payment plans and drop/transfer policies, especially in light of COVID.

In addition to these longer, intensive classes we also offer **virtual shadowing** and Basic Wilderness First Aid, both **100% online**. These can be done any time, from any location, and are priced from free to under \$100. And new virtual shadowing videos have just been added.

The Delta variant has made things once again particularly tough, and the pre-med or pre-health track is always tough to even brutal. **Get out of the rut and expand your knowledge and skills,**

make yourself more competitive, and, dare we say, have some fun! For more information please contact [Dr. Todd Miner](#).
