Annual Report of the Advanced Conversion Technologies Task Force to the Joint Minerals, Business, and Economic Development Interim Committee

September 30, 2014

(W.S. 21-17-121c)

This report summarizes the activities of the Advanced Conversion Technologies Task Force (formerly known as the Clean Coal Task Force) for Fiscal Year 2014 (July 1, 2013 – June 30, 2014). For the purposes of this report, the Advanced Conversion Technologies Task Force will hereafter be referred to as the Task Force and the Advanced Conversion Technologies Research Account as the Account.

Creation and Appropriations Background

In 2007, House Bill 301 created the Task Force consisting of the current voting members of the University of Wyoming (UW) Energy Resources Council (ERC). That legislation appropriated \$2.5 million to the Account which could only be expended upon appropriation by the Legislature and directed the Task Force to solicit proposals for research in clean coal technologies. The legislation also required that the appropriation could not be disbursed unless the project demonstrated a dollar-for-dollar match from non-state funds.

The Account was created to stimulate research and development in the area of low-emissions and advanced conversion technologies. The objectives of the program are to:

- Enable and accelerate demonstration and early commercial deployment of conversion technologies that have the potential to enhance and improve the use of sub-bituminous coal at high altitudes, specifically in Wyoming.
- Generate and test new ideas for significant improvement and cost reductions in next-generation, low-emissions, and advanced conversion technologies.
- Support collaborative research and development (R&D) in accomplishing the above objectives.

The Account supports proposals addressing the following:

- Research and development of new or improved conversion technologies that reduce emissions
- Pilot-scale demonstration of emerging technologies
- Engineering scale-up of demonstrated technologies
- Integration and operation of carbon capture technologies

Chapter 57 of the Legislature of the State of Wyoming's 2009 General Session Law extended the sunset date for the Task Force from June 30, 2010 to June 30, 2013. Section 5(a) provides that the 2007 general fund appropriation of \$2.5 million into the Account will not revert and can continue to be used for clean coal research. Since 2007, four additional appropriations of funds derived from Abandoned Mine Land (AML) funds, each with a reversion date, have been made to the Account (Table 1).

Table 1: Funds Appropriated for Advanced Conversion Research

Appropriation	Amount	Funding Type	Reversion Date
2007 Appropriation	\$2,500,000	State	No reversion date
2008 Appropriation	\$3,800,000	AML	June 30, 2012
2009 Appropriation	\$10,613,047	AML	June 30, 2012
2010 Appropriation	\$14,000,000	AML	June 30, 2014
2012 Appropriation	\$10,000,000	AML	June 30, 2016
Total	\$40,913,047		---

In the 2012 budget session, SF15/SEA3 revised the sunset date of the Task Force from June 30, 2013 to June 30, 2017 to ensure the Task Force has oversight of the program one year after the June 30, 2016 reversion date.

FY 2014 Task Force Funding Sources

Abandoned Mine Land (AML) Funds - Redirected

In the 2012 budget session, HB121/HEA25 provided for the submittal of grant applications by the Wyoming Department of Environmental Quality (DEQ) to the Federal Office of Surface Mining for future funds and redirection of prior Abandoned Mine Land (AML) fund authorizations. Redirected funds derived from several sources including the Account and the Wyoming Carbon Underground Storage Project (WYCUSP). A portion of these funds was appropriated to the University of Wyoming's School of Energy Resources (SER) to fund research projects under the recommendation of the Task Force (Table 2). The status of each of these programs is discussed in more detail below.

Table 2: AML Funded Efforts Assigned to the Task Force and SER

Program Name	2012 Appropriation	End Date or Fund Reversion Date	Project Status
Advanced Conversion Technology Research	\$10,000,000	Reverts June 30, 2016	On-going
Minerals to Value-Added Products Feasibility Study	\$500,000	Study end date, September 30, 2012, Funds revert June 30, 2014	Completed
Commercial-Scale Minerals to Value-Added Products Facility	\$9,000,000	Reverts June 30, 2016	Reassigned to Governor's Office
Natural Resources to Manufacture Glass and Glass Products in Wyoming	\$100,000	Reverts June 30, 2014	Funds repurposed to another use

New Appropriations - State Funds

In the 2014 legislative session, a \$15 million appropriation was made under section 334(n) of the state budget bill to the Wyoming governor's office for design, construction and operation of an Integrated Test Center (ITC) to study the capture, sequestration and management of carbon emissions from a Wyoming coal fired power plant. Allocation of test bay space in the ITC will be determined in a manner similar to the X Prize Foundation. The X Prize is a focused contest with specific rules for competition that would, in Wyoming's case, challenge researchers to 1) improve efficiency of carbon capture, and 2) develop a beneficial use of CO₂ at utility scale. The legislation also calls for construction of more test bays in addition to the contest test bays, which will be executed under future Wyoming law.

In the legislation, the Task Force is assigned several duties, including:

- Establishing a cooperative effort with SER for construction, management and operations of the ITC.
- Advising the governor on the size of the research facilities in the test center.
- Signing off on facility design to accomplish stated objectives.
- Electing to stop progress on the project if the construction of the test center is deemed unsatisfactory.
- Making recommendations to the governor of partners interested in the test center should there be more interest than can be accommodated by the test center.

The first legislatively mandated milestone for the Task Force was to report the objectives, timelines and deliverables of the ITC effort to an appointed legislative select committee on or before May 15, 2014. In addition, on or before August 31, 2014, the Task Force is to provide recommendations for further legislative action necessary to secure projects for the ITC that have the potential to deliver public benefit to the state of Wyoming.

FY 2014 Program Updates

Advanced Conversion Technology Research

The 2012 appropriation of \$10,000,000 toward advanced conversion technology research was committed to 10 research projects through a competitive request for proposal process. All of the appropriations directed toward clean coal and advanced conversion technology research since 2007 have been fully committed to 49 different projects. Of the 49 projects originally funded, 35 have been completed to date, 11 projects are in progress, 2 projects were terminated prior to completion and 1 project failed to negotiate a contract. On behalf of the Task Force, SER staff continues to monitor and support the ongoing research projects. Listings of all the projects funded by the Task Force are shown in Tables 4-10 at the end of this document.

By legislation, the 2007 funds do not have a reversion date. (Table 1) In addition, the 2007 funds were set up as an interest bearing account. The original 2007 appropriation of \$2.5 million has been accumulating interest; however, over time the rate of interest growth has slowed as the

2007 funds have been spent on research projects. Since 2007, this account has accumulated \$601,060.26 in interest, some of which has been deployed by the Task Force.

In 2007, \$285,000 of the interest was allocated by the Task Force as supplemental funding to a 2007 project, and in 2011 \$44,639 of the interest was used to partially fund a 2011 project. According to the State of Wyoming, Department of Administration and Information Accounting Office, as of June 30, 2014, the balance of interest on the 2007 account was \$271,421.26. (Table 3) At the August 22, 2014 Task Force meeting, Task Force members will begin discussion on what to do with these funds. Because the Task Force has a sunset date of June 30, 2017, a decision regarding the fate of the interest on the 2007 funds will need to be made by the Task Force prior to that date.

Table 3. Advanced Conversion Technology Account Balance

Appropriation	Amount
2007 Appropriation	\$2,500,000
<i>Interest generated 7/1/2007-6/30/2014</i>	\$601,060
2008 Appropriation	\$3,800,000
2009 Appropriation	\$10,613,047
2010 Appropriation	\$14,000,000
2012 Appropriation	\$10,000,000
Subtotal	\$41,514,107
2007 Awards	(\$2,783 ,221)
2008 Awards	(\$3,699,986)
2009 & 2010 Awards (From 2009 Appropriation)	(\$6,046,360)
2011 Awards (From 2010 Appropriation)	(\$12,412,655)
2012 Awards	(\$11,050,309)
Redirected Funds (From 2008-2011)*	(\$5,250,154)
Subtotal	(\$41,242,685)
Remaining Balance <i>(As interest from 2007 funds)</i>	\$271,422

*Redirected funds derive from projects that were funded but were either terminated early or never entered into a contract. All of these funds were put back into the Account and committed to new projects.

2014 Advanced Conversion Technologies Fund Research Symposium

SER hosts an annual research symposium to provide a forum for researchers funded through the Advanced Conversion Technologies Fund to present the results of their work to the public. This year's symposium was held on August 20-21, 2014 in Laramie. There were 13 presenters and approximately 60 people in attendance. The presentations were informative and demonstrated

several promising technologies in the areas of gasifier design and carbon capture. The audience was very engaged throughout the symposium as demonstrated by the robust and interactive question and answer sessions following each presentation.

Commercial-scale Minerals to Value-added Products Facility

In the 2012 legislative session, HB121/HEA25 directed a \$9 million appropriation of Abandoned Mine Land funds to the Wyoming Governor's Office for the purpose of supporting the construction and operation of a commercial-scale facility which converts minerals to value-added products. Applications for these funds were to be received by the Task Force with awards made by the Governor upon receiving recommendation from the Joint Minerals, Business and Economic Development Committee.

In the 2013 legislative session, Senate File 106/SEA 86 was amended to remove the Task Force's duties of receiving grant proposals and executing agreements to the Wyoming Governor's Office. The Governor's Office may request a determination by the Task Force as to whether a grant has a reasonable likelihood of leveraging a substantial future capital investment. To this date, no facilities are in progress and none of the \$9 million has been spent.

Natural Resources to Manufacture Glass and Glass Products in Wyoming

In the 2012 legislative session, HB121/HEA25 directed \$100,000 to SER to provide grants to conduct one or more studies to evaluate the feasibility of using Wyoming natural resources to manufacture glass and glass products in Wyoming. Results from any studies were to be reported to the Joint Minerals, Business and Economic Development Committee by June 1, 2013.

In a letter dated May 31, 2012 from the Task Force to the members of the Joint Minerals, Business and Economic Development Committee and the Joint Appropriations Committee, the Task Force identified four previous studies focusing on the manufacture of glass and glass products in Wyoming. All four studies concluded that the manufacture of glass and glass products is not economically viable in Wyoming. The letter from the Task Force asked for consideration to broaden the scope of the study to the manufacture of other products as well as glass. No action was taken on this in the 2013 legislative session.

The Task Force submitted another letter dated June 1, 2013 to the chairs of the Joint Minerals, Business and Economic Development Interim Committee and the Joint Appropriations Interim Committee recommending that further study of Wyoming natural resources to manufacture glass and glass products not be pursued, given that the findings of the four previous studies remain relevant. As a result, the \$100,000 appropriated to this study have been repurposed to another use and no more effort will be dedicated to this project.

Table 4. 2007 Funded Projects

Proposal Title	Submitted By	Funding Requested	Outside Match	Outside Match Organization	Project Total Funds	Technology Areas	Project Status
Capture & Mineralization of Carbon Dioxide from Coal Combustion Flue Gas Emissions: Pilot-Scale Studies	UW Dept. of Renewable Resources	\$485,000	\$487,115	Jim Bridger Power Plant	\$972,115	Carbon Capture & Storage	Complete

* The Task Force felt this proposal was really comprised of two distinct research efforts and decided to only fund the enhanced water recovery portion of the research in the amount of \$300,000.

** This project is a follow-up to a currently on-going study funded by the Task Force in 2009. The 2009 project is currently behind schedule; therefore, the Task Force recommended partial funding of this project in the amount of \$387,481.

+ Assumes projects with a reduced award provide the originally proposed amount of outside match.
