Key Takeaways

Wyoming Oil production increased by 3.5% YoY as of June 2025.¹ This puts the state's oil production on pace with the January 2025 CREG Forecast estimate of 105 million barrels for 2025.² The spot price for crude oil (WTI) is down 15.4% YoY as of August 2025 but is still nearing \$65 per barrel.³

Wyoming Natural Gas production is nearing 100,000 MMcf despite a 2.4% decrease in production YoY as of June 2025, a decrease of approximately 2,421 MMcf. This level of production is still behind pace of the January 2025 CREG Forecast production estimate.^{2,4} All reported hub prices are still up YoY as of July 2025. Wyoming hub prices remain above \$2.45 per MMBtu, trending towards \$3.00 per MMBtu.⁵

Wyoming Coal preliminary production data for Q2 of 2025 shows a 14.5% increase YoY. Preliminary production data for July 2025 shows a decrease of 4.05% compared to previous months.⁶ Revisions to previous production estimates and the new preliminary data puts Wyoming coal production on pace with the January 2025 CREG Forecast production estimate of 185 million short tons for 2025.² Powder River Basin coal spot for August 2024 was at \$13.94 per short ton but is up 3.3% YoY as of August 2025 reaching \$14.4.⁷ This is near the January 2025 CREG Forecast of \$14.25 per short ton.

Wyoming Uranium production saw a 98.9% increase YoY as of Q1 of 2025, amounting to 92,595 lbs. Wyoming surpassed Texas (69,082 lbs.) in production while Utah (148,856 lbs.) is still the largest uranium producing state in the U.S. as of Q1 of 2025.⁸ The spot price for uranium decreased by 4.3% YoY as of August 2025 at \$75.13 per pound.⁹

Wyoming Net Electricity Generation for June 2025 totaled 3,366 GWh, up 8.2% YoY. Coal-derived electricity generation is up 26.3% YoY, making up approximately 60.1% of the state's net electricity generation. Natural gas electricity generation totaled 454 GWh, a decrease of 13.9% YoY. Electricity generation from renewables decreased 11.0% YoY, totaling 759 GWh.¹⁰

Wyoming Commodities Overview

Wyoming Crude Oil

Month	Production (Thousand Barrels) ¹
June 2024	8,685
June 2025	8,989
% Change	3.5%

CREG Forecast for 2025: 105 million barrels²

A majority of Wyoming oil production occurs in the Powder River Basin, producing approximately 220,550 barrels per day in June 2025, making up 84.6% of Wyoming's total oil production. This level of monthly production in the PRB is a 10.71% increase YoY, up approximately 661,634 barrels compared to June 2024.³

Month	Spot Price: WTI (\$/Barrel) ⁴
Aug 2024	\$76.68
Aug 2025	\$64.86
% Change	-15.4%

CREG Forecast for 2025: \$65.00 per barrel

Wyoming crude oil production increased by 3.5% YoY as of June 2025. This puts the state's oil production on pace with the January 2025 CREG Forecast estimate of 105 million barrels for 2025.¹ The spot price for crude oil (WTI) is down 15.4% YoY as of August 2025 but is still nearing \$65 per barrel.⁴ It should be noted that the January 2025 CREG Forecast price of \$65 only reflects Wyoming oil price prior to transportation to Cushing and is not reflective of WTI spot price. Still, Wyoming oil prices follow the same general trends as WTI prices.

CREG Forecast for 2025: 1,300,000 MMcf ²

The majority of natural gas production in Wyoming occurs in the Green River Basin, producing approximately 1,802,651 Mcf per day in June 2025. This accounted for 50.6% of statewide production in June 2025. The Green River Basin saw a 6.4% decline compared to June 2024.³

CREG Forecast for 2025: \$3.60 per million BTU ²

Wyoming natural gas production has seen a 2.4% decrease in production YoY as of June 2025, a decrease of approximately 2,421MMcf.¹ This level of production is still behind pace of the January 2025 CREG Forecast production estimate.² All reported hub prices are still up YoY as of Aug 2025. Wyoming hub prices remain above \$2.45 per MMBtu, trending towards \$3.00 per MMBtu.⁴ This is below the January 2025 CREG Forecast price of \$3.60 though this forecasted price reflects the full natural gas stream, not the methane price.²

CREG Forecast for 2025: \$14.25 per short ton ³

Powder River Basin coal spot price increased compared to July 2025 and is at \$14.40 per short ton but is up 3.3% YoY as of August 2025. This is slightly above the January 2025 CREG Forecast of \$14.25 per short ton.^{3,4} Preliminary production data for Q2 of 2025 shows a 14.5% increase YoY. Preliminary production data for August 2025 shows a slight decrease compared to previous months and is down 4.05% YoY.² Revisions to previous production estimates and the new preliminary data bring Wyoming coal production back on pace with the January 2025 CREG Forecast production estimate of 185 million short tons for 2025.³

CREG Forecast for 2024: \$58.00 per pound³

Q1 of 2025 saw an increase of 98.9% YoY in Wyoming uranium concentrate (U_3O_8) production, amounting to 92,595 lbs. Wyoming surpassed Texas (69,082 lbs.) in production while Utah (148,856 lbs.) is still the largest uranium producing state in the U.S. as of Q1 of 2025. Overall U.S. production in Q1 of 2025 saw a 17.3% decrease compared to Q4 of 2024.¹ The spot price for uranium saw a slight decrease and is down 4.3% YoY as of Aug 2025.²

% Change	0.0%

CREG Forecast for 2025: 22 million tons ³

Price – No public data available

CREG Forecast for 2025: \$85.00 per ton ³

Trona production in Wyoming was 1,580 thousand tons in June 2025, the same as June 2024, showing no YoY growth for the month. This is behind pace with the average level of production in 2024 where reported Wyoming annual production amounted to 19.4 million tons.¹ This is also behind pace of the January 2025 CREG Forecast estimate of 22 million tons for 2025 though it should be noted that some production data is excluded to protect proprietary information (see footnotes) so it is likely that the state forecast for production is more accurate than the data portrays.³ Taking this into consideration, this data remains as a great indicator for the health of the Wyoming soda ash industry.

Employment

June 2025 saw a 9.5% decrease YoY in natural resource and mining employment but is steady compared to the decline seen in recent months.¹

Wyoming Natural Resources and Mining Employment

Month	Number of Employees
June 2024	17,058
June 2025	15,443
% Change	-9.5%

Employment in the oil and gas sector has remained relatively level, decreasing slightly by 1.2% YoY as of Q4 2024. Mining employment decreased the most among these three sectors, down 10.0% YoY as of Q4 of 2024. Employment in the support activities sector is also down with a YoY decrease of 5.6%.

% Change	26.3%	-11.0%	-13.9%	-5.6%	7.1%	-12.5%	40.0%	8.2%

Wyoming net monthly electricity generation totaled 3,366 GWh in June 2025, up 8.2% YoY. Coal-derived electricity generation is up 26.3% YoY, making up approximately 60.1% of the state's net electricity generation. Natural gas electricity generation decreased by 13.9% YoY. Net electricity generation from renewables amounted to 759 GWh, a decrease of 11.0% YoY.

Wyoming nameplate capacity is led by coal power where nearly 6,700 MW is currently in operation. This is followed by wind power with over 3,200 MW of capacity currently in operation. Total nameplate capacity currently operational in Wyoming as of 2023 is 11,105 MW with an additional 5,647 MW, predominantly wind, proposed for the near future.

Regional Comparison

As of June 2025, Wyoming ranks third in this regional comparison for net monthly electricity generation, totaling 3,366 GWh. This is behind Colorado (4,942 GWh) and New Mexico (3,482 GWh). Wyoming's net electricity generation is up 8.2% YoY, the third largest gain in electricity generation among these six states.³

Wyoming currently imposes a tax of \$1.00 per MWh of electricity produced via wind which begins three years after the wind turbine first generates electricity. This tax, of which 40% is distributed to the state and 60% is distributed to the counties where the electricity was produced, has generated millions of dollars in tax revenue since enacted in 2012.¹ Wyoming has seen substantial investments in wind electricity generation, with wind nameplate capacity surpassing 3000 MW in 2021.^{2,3} The average capacity factor for Wyoming wind electricity generation in 2022 was 37.1%.^{4,5}

Regardless, this data is representative of these industries' contributions.

Severance Taxes

Severance tax, one of the major taxes on the extraction of minerals in Wyoming, is one of the largest sources of tax revenue for the state. In FY 2024, severance tax derived from oil extraction accounted for the largest share of state severance tax revenue.

Ad Valorem Production Tax is a tax on the assessed value of a commodity at the point of extraction. The tax is applied by the counties, using the mills levied by each county to determine the amount of tax derived. In Wyoming, a 100% assessment rate is used on mineral production with the statewide average mill levy among all counties being 63.135 mills in 2023.¹ Ad valorem tax on production accounted for approximately 52% of total property taxes collected in Wyoming in 2023.²
