Key Takeaways

Wyoming Oil production decreased by 4.07% YoY as of April 2026 with a total of 8,602 thousand barrels.¹ This still puts the state's oil production on pace with the January 2026 CREG Forecast estimate of 100 million barrels for 2026.² The spot price for crude oil (WTI) is up 24.41% YoY as of June 2026 and is at \$84.81 per barrel, higher than the January 2026 CREG forecast of \$55 for 2026.³

Wyoming Natural Gas reached 92,665 MMcf as of April 2026, representing an 8.90% YoY decrease. Production remains below the pace assumed in the January 2026 CREG forecast.^{2,4} Natural gas hub prices increased this month, with both the Cheyenne Hub and Opal trading at about \$1.80/MMBtu, while Henry Hub remained higher at \$3.15/MMBtu.

Wyoming Coal preliminary production data for Q2 2026 indicates a 14.29% YoY increase, while early estimates for June 2026 show an increase of 10.58% YoY.⁵ Revisions to earlier production estimates, along with the new preliminary data, place Wyoming coal production above pace with the January 2026 CREG forecast of 190 million short tons for 2026. The Powder River Basin coal spot price fell to \$14.69 per short ton, a 2.71% YoY increase as of June 2026. This price is slightly above the January 2026 CREG forecast of \$14.25 per short ton.⁶

Wyoming Uranium production saw a 65.94% increase YoY as of Q1 of 2026, amounting to 153,649 lbs. The spot price for uranium saw an increase of 8.28% YoY as of June 2026 and is priced at \$85.00/lbs.

Wyoming Net Monthly Electricity Generation totaled 2,979 GWh in April 2026, down 7.94% YoY. Coal-derived electricity generation decreased by 15.47% YoY, while natural gas-fired generation increased 3.92% YoY. Net electricity generation by Conventional Hydro increased 26.14% YoY, and net electricity generation from renewable sources reached 1,243 GWh, representing an 11.58% YoY increase.⁷

Wyoming currently imposes a tax of \$1.00 per MWh of electricity produced via wind which begins three years after the wind turbine first generates electricity. This tax, of which 40% is distributed to the state and 60% is distributed to the counties where the electricity was produced, has generated millions of dollars in tax revenue since enacted in 2012.¹ Wyoming has seen substantial investments in wind electricity generation, with wind nameplate capacity reaching 3727 MW in 2024.^{2,3} The average capacity factor for Wyoming wind electricity generation in 2022 was 37.1%.^{4,5}

Ad Valorem Production Tax is a tax on the assessed value of a commodity at the point of extraction. The tax is applied by the counties, using the mills levied by each county to determine the amount of tax derived. In Wyoming, a 100% assessment rate is used on mineral production with the statewide average mill levy among all counties being 63.89 mills in 2024¹ and 67.53 mills in 2025².

¹Wyoming Department of Revenue. (2025). 2025 Annual Report.

² 2025 Ad valorem taxes are estimated based on available monthly data and will be updated, if necessary, upon release of the Wyoming Department of Revenue annual report.
