## **LIST OF ABBREVIATIONS**

The following table describes the various abbreviations and acronyms used throughout the report:

<b>Abbreviation</b>	<b>Meaning</b>
ASTM	American Society for Testing and Materials
FHWA	Federal Highway Administration
GIS	Geographic Information System
GPS	Global Positioning System
IRI	International Roughness Index
ICC	International Cybernetics®
PCI	Pavement Condition Index
PMS	Pavement Management System
PSI	Pavement Serviceability Index
PQR	Pavement Quality Rating
SHRP	Strategic Highway Research Program
STIC	State Transportation Innovation Council
WCCA	Wyoming County Commissioner Association
WYDOT	Wyoming Department of Transportation
WYT <sup>2</sup> /LTAP	Wyoming Technology Transfer Center

*This page intentionally left blank*

## 1 INTRODUCTION

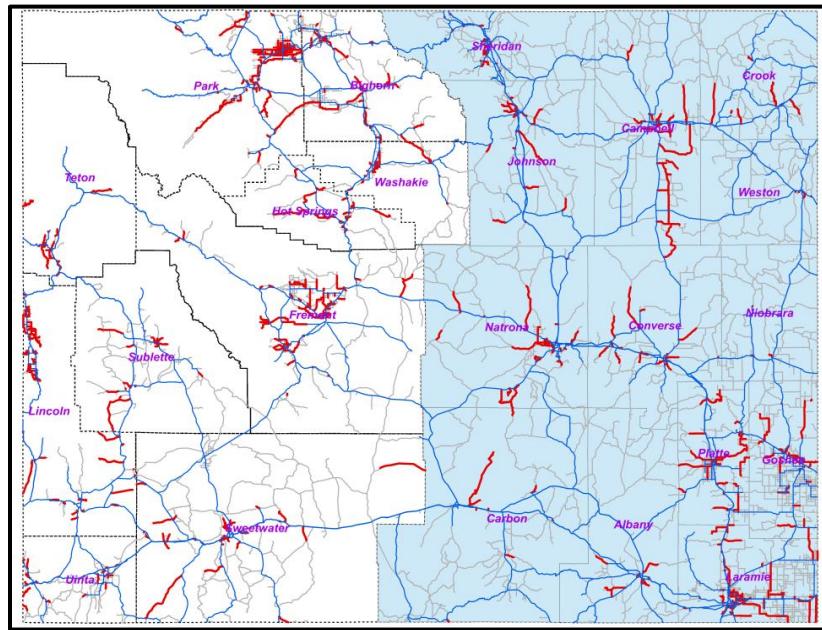

Since 2014 the Wyoming County Commissioner Association (WCCA), Wyoming Department of Transportation (WYDOT) and the State Transportation Innovation Council (STIC) have supported funding a project to develop a comprehensive database for Pavement Management System (PMS) of county paved roads. As a result, a comprehensive effort was conducted by the Wyoming Technology Transfer Center (WYT2/LTAP) to collect roadway inventory data, pavement condition data and roadway thicknesses. The pavement condition data has been described in terms of Rut Depths, International Roughness Index (IRI), Pavement Condition Index (PCI) and Pavement Serviceability Index (PSI). From 2022 and onward, the condition parameters of PCI and PSI have been replaced with Percent Cracking and Pavement Quality Rating (PQR) to better align with WYDOT's pavement management efforts and widely accepted engineering practices. Following this change, previous years' data was used to retroactively calculate PQR and Percent Cracking from 2018 onward. These new condition parameters for 2018-2022 have also been added to the online database published in ArcGIS online hosted by WYT2/LTAP center. Pavement condition data is collected every year for half of the state. In 2022, the pavement condition data was collected on 1,116 miles in the following counties in the Eastern part of the state: Albany, Campbell, Carbon, Converse, Crook, Goshen, Johnson, Laramie, Natrona, Niobrara, Platte, Sheridan and Weston counties (See Figure 1).

Pathway Services<sup>®</sup>, Inc. collected the data for this project from 2014 to 2021. Beginning in 2022, International Cybernetics<sup>®</sup> (ICC) has been contracted to collect pavement condition data on all state and county roads in Wyoming. Pavement thicknesses were collected in 2014. The 2022 data was collected with ICC's IrisPRO Pave vans and it was provided to the WYT2/LTAP center in spring of 2022. Very similar to Pathway's equipment and methods, ICC's equipment uses fast, high-resolution 3D cameras that capture both high-resolution images and transverse profiles of the road surface. The transverse profiles consist of thousands of points across the lane. In addition to this, an imaging and crack detection tool assess detects and measures pavement distresses automatically and is able to provide data describing percent cracking and PQR. Table 1 is a sample of the comprehensive database including the 2014, 2020 and 2022 pavement condition data.

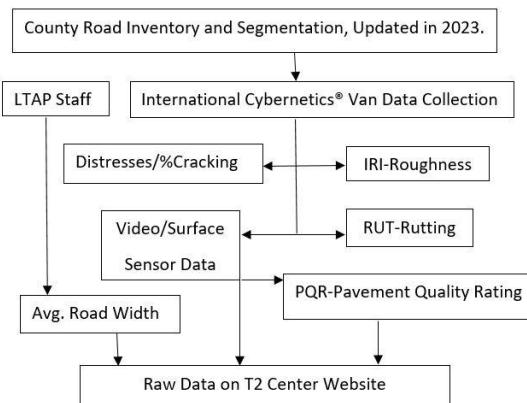

Overall, the findings of this project are summarized in three main elements: reports for each individual county, a statewide report, and a comprehensive database published in ArcGIS online hosted by the WYT<sup>2</sup>/LTAP center. This report summarizes pavement conditions of 2022 in Albany County. In addition, this report compares the pavement condition between 2014, 2020 and 2022. The comprehensive database is also published online by the WYT2/LTAP center. The raw datasets are also included on a hard drive mailed to each county.

**Table 1: Sample of Comprehensive Database**

County	RID	Begin MP	End MP	Primary Name	2014			2018			2020				2022

**Figure 2: Pavement Management System Data Included in this Report**

## **2 BACKGROUND**

### **2.1 Road Segmentation**

A primary task in any PMS is to create a list of roadway segments that have uniform performance conditions along their lengths. When maintenance records are limited and inconsistent among different counties, roadways can be segmented based on the perceived usage levels, changes in surface type, and major intersections where traffic either diverts or converges with a road. Locations of the road segments are established with global positioning system (GPS) technology and stored in a geographic information system (GIS) database. This segmentation was performed by WYT<sup>2</sup>/LTAP staff and Pathway<sup>®</sup> Services.

### **2.2 Pavement Condition Parameters**

The Pathway Services<sup>®</sup> automated data collection van operates at normal highway speeds to collect four types of information for each road: automated rutting data expressed in inches (RUT); International Roughness Index (IRI); video logs of the pavement and roadside; and 3D images. Additionally, roadway width is measured remotely using satellite imagery.

#### **2.2.1 Rut Depths (RD)**

The rut depth is a measure of permanent deformation of pavement. WYDOT identifies any roads with rutting greater than 0.3 inches as potentially hazardous (Huntington, et al. 2013). Since 2018, the rut depth data has been collected more precisely compared to previous years (2014 and 2015). Since 2018, the full depth transverse profile is measured many times every inch along the roadway. In previous years, only one transverse profile was measured every five feet.

#### **2.2.2 International Roughness Index (IRI)**

The IRI is the roughness index commonly used for representing ride quality. IRI is represented as units of slope (in./mi). The thresholds used by (Huntington, et al. 2013) for defining condition based on the IRI are as follows:

- Excellent: Less than 70 in./mi
- Good: 70 - 100 in./mi
- Fair: 101 - 130 in./mi
- Poor: 131 - 170 in./mi
- Very Poor: Greater than 170 in./mi

#### **2.2.3 Percent Cracking (% Crack)**

Percent cracking data effectively replaces the role of Pavement Condition Index (PCI) in our county pavement management reporting from 2022 onward. The Federal Highway Administration (FHWA) defines Percent Cracking as, “The percentage of the total area exhibiting visible fatigue type cracking for all severity levels in the wheel path in each section.”

Percent cracking data for each segment is generated by using the video logs from cameras facing the pavement surface.

Similar to PCI, Percent Cracking data provides a summary of the extent of cracking distresses present on a section of pavement. This information is useful in identifying immediate maintenance and rehabilitation needs, monitoring pavement condition over time, develop a network preventive maintenance strategy, develop road maintenance budgets, and evaluate pavement materials and designs.

#### **2.2.4 Pavement Distresses**

Beginning in 2020, this project includes a detailed breakdown of specific pavement distresses on county roads. This distress specific data is a more detailed report of the same information collected by the 3D Data Acquisition System described above in section 2.2.3 regarding PCI. This extensive data set details distress type, severity, extent and location. The following distresses are included in this report and are defined by the Strategic Highway Research Program's (SHRP) p-338 manual as:

- Transverse cracking- “Cracks that are predominately perpendicular to pavement centerline, and are not located over portland cement concrete joints” (SHRP, 1993).
  - Low Severity- Sealed crack, or unsealed cracking with a mean width of  $\leq 0.25$  inches.
  - Medium Severity- Cracking with a mean width  $> 0.25$  inches and  $\leq 0.75$  inches; or any cracking of equal width that is adjacent to low severity cracking.
  - High Severity- Cracking with a mean width of  $> 0.75$  inches; or any cracking with a mean width of  $\geq 0.75$  inches that is also adjacent to moderate or high severity cracking.
- Longitudinal cracking- “Cracks predominately parallel to pavement centerline” (SHRP, 1993).
  - Low Severity- Sealed crack, or unsealed cracking with a mean width of  $\leq 0.25$  inches.
  - Medium Severity- Cracking with a mean width  $> 0.25$  inches and  $\leq 0.75$  inches; or any cracking of equal width that is adjacent to low severity cracking.
  - High Severity- Cracking with a mean width of  $> 0.75$  inches; or any cracking with a mean width of  $\geq 0.75$  inches that is also adjacent to moderate or high severity cracking.
- Alligator cracking- “A series of interconnected cracks in early stages of development. Develops into many-sided, sharp-angled pieces, usually less than 1 foot on the longest side, characteristically with a chicken wire/alligator pattern” (SHRP, 1993).

- Low Severity- A series of cracks with none or few connected cracks. Cracks are not sealed and there is no evidence spalling or pumping.
- Medium Severity- Interconnected cracks forming above described pattern. May include light spalling and cracks may be sealed, but no evidence of pumping.
- High Severity- Interconnected cracks displaying moderate to severe spalling. Individual pieces may move under traffic loading and may display evidence of pumping.

## 2.2.5 Pavement Quality Rating (PQR)

PQR provides a single number on a scale from 0 to 5 that evaluates the overall condition of the pavement from the traveling public's perspective. The following equation is used by WYDOT to calculate the PQR of asphalt pavements on the state highway system:

$$\text{Asphalt PQR} = (\text{RIDE RATING}) - 4 \times \text{RUT}^2 - (5 \times \sqrt{\left(\frac{\% \text{CRACK}}{100}\right)})$$

Where:

- IRI is the International Roughness Index (inches/mile)
- Ride Rating is calculated from IRI and derived from the following equation:

$$\text{Asphalt RIDE RATING} = 5.35^{(-0.0047 \times IRI)}$$

- RUT is the mean Rut Depth (inches)
- % Crack is Percent Cracking as described in section 2.2.3.

The following rating scale is used by WYDOT and has been adopted in this project to describe the condition of roads with a particular PQR value:

Greater than 3.5	-	Excellent Condition
2.51 – 3.5	-	Fair Condition
Less than 2.5	-	Poor Condition

## **2.2.6 Average Roadway Width**

Beginning in 2018, average roadway width was added as a new parameter in this report. Roadway paved surface widths were measured using Google Earth high-definition satellite imagery and measurement tool. Three measurements were taken for each road segment and then averaged.

The following scale is used in this project to describe the average width of roads measured in feet.

Less than 25 ft.	Narrow
25-26 ft.	Moderate
27-30 ft.	Wide
Greater than 30 ft.	Very Wide

### **3 EASTERN PART OF THE STATE COUNTY DATA**

Data from multiple sources such as GIS layer of county paved roads, traffic counts, pavement condition, and road thickness were summarized for statewide county roads in this report. Appendix 1 provides the list of the roadway segments by each county in the eastern part of the state with pavement conditions (Rut Depth, IRI, % Crack, Distress Data, PQR and Average Road Width) and pavement thicknesses (asphalt and base thickness). This chapter describes the overall conditions of eastern part of the state county paved roads.

#### **3.1 Statewide County Paved Roads**

As shown in Table 2, there are 798 roadway segments in eastern part of the state with 1,116 miles. Summary by each county can be seen in Appendix 2.

**Table 2: Summary of Statewide and Eastern Part of the State County Paved Roads.**

	Statewide	Eastern Part
Total Length, miles	2,303	1,116
Total Number of Segments	1,972	798
Minimum Segment Length, mile	0.001	0.001
Maximum Segment Length, mile	25.82	25.41

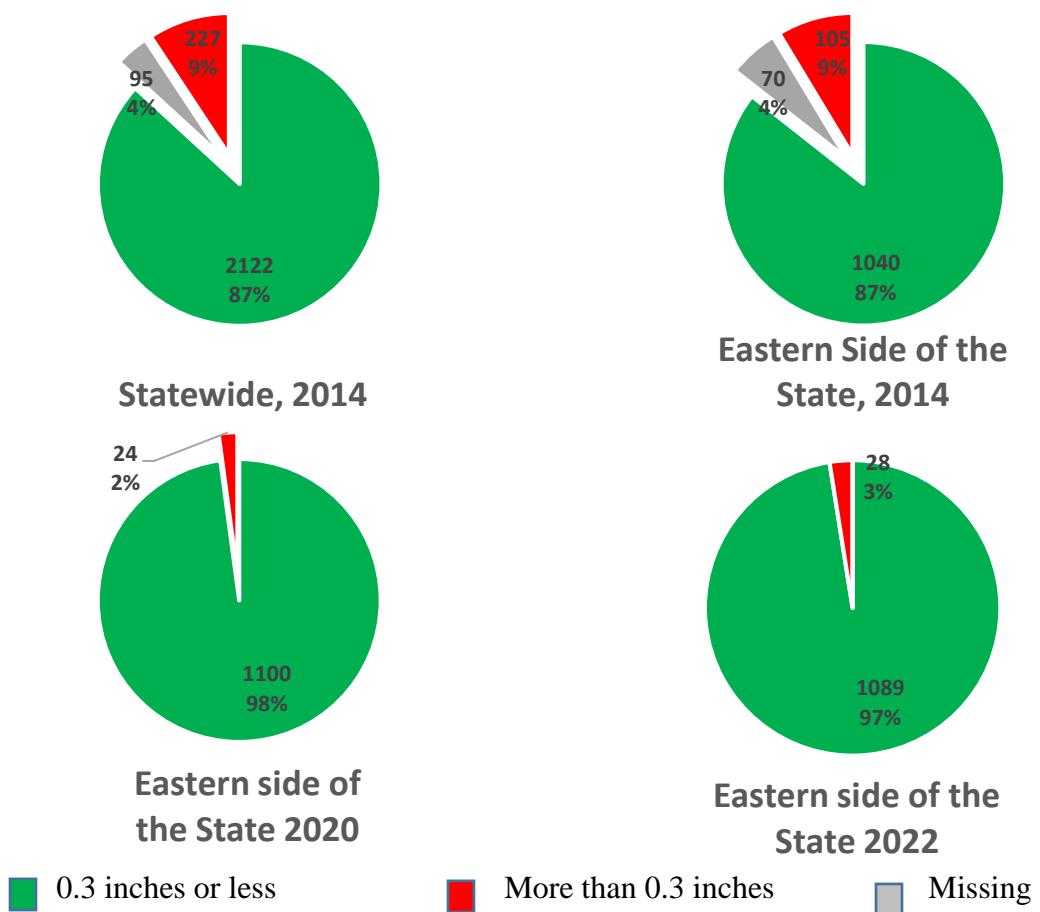

## 3.2 Pavement Condition Assessments

### 3.2.1 Rut Depths (RD)

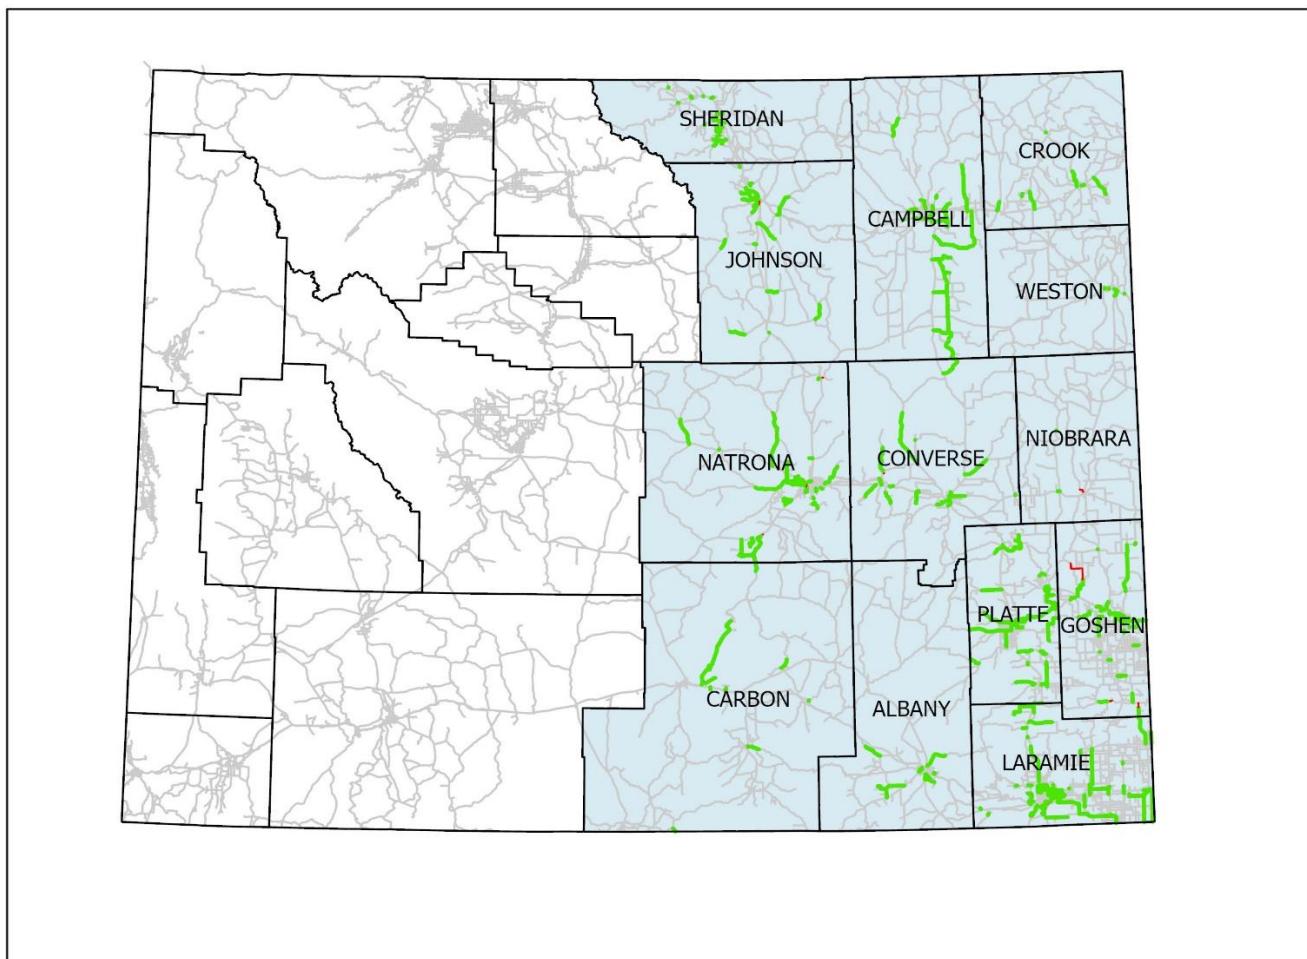

Table 3 and Figure 3 show the average rut depth divided into two categories: greater than 0.3 inches and less than 0.3 inches in Eastern Wyoming comparing 2014, 2020 and 2022. Figure 4 shows the rut depth of the eastern part of the state county paved road segments. The summary of rut depth for each county is summarized in Appendix 3.

**Table 3: Rut Depth in Statewide versus Eastern Wyoming in 2014, 2020 and 2022.**

	Eastern side of the State, 2014	Eastern side of the State, 2020	Eastern side of the State, 2022	Statewide, 2014
More than 0.3 inches	105 (8%)	24 (2%)	28 (3%)	227 (9%)
0.3 inches or less	1,039 (85%)	1,100 (98%)	1,089 (97%)	2,122 (87%)
Missing	69 (5%)	0 (0%)	0 (0%)	95 (4%)
<b>Total</b>	<b>1,214 (100%)</b>	<b>1,124 (100%)</b>	<b>1,116 (100%)</b>	<b>2,444 (100%)</b>

### 3.2.2 International Roughness Index (IRI)

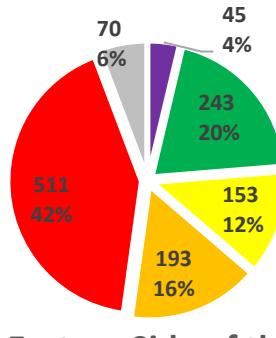

Table 4 and Figure 5 show the roughness conditions (IRI) of county roads. In 2022, 38 percent of the county roads were in very poor condition. Figure 6 shows the roughness condition of the Eastern part of the state. The summary of IRI for each county is summarized in Appendix 4.

**Table 4: Roughness (IRI) in Statewide versus Eastern Wyoming in 2014, 2020 and 2022**

	Eastern side of the State, 2014	Eastern side of the State, 2020	Eastern side of the State, 2022	Statewide, 2014
Excellent (Less than 70)	44 (3%)	87 (8%)	70 (6%)	121 (5%)
Good (70 – 100)	243 (20%)	219 (19%)	173 (16%)	346 (14%)
Fair (101 – 130)	152 (12%)	208 (19%)	250 (22%)	248 (10%)
Poor (131 – 170)	193 (15%)	188 (17%)	197 (18%)	386 (16%)

## **APPENDIX 2: COUNTY PAVED ROADS SUMMARIES**

**Appendix 2.1: Summary of County Paved Roads in Albany County.**

	Statewide	Eastern Part	Albany County
Total Length, miles	2,303	1,116	42.57
Total Number of Segments	1,972	798	38
Minimum Segment Length, mile	0.001	0.001	0.04
Maximum Segment Length, mile	25.82	25.41	6.99

**Appendix 2.2: Summary of County Paved Roads in Campbell County.**

	Statewide	Eastern Part	Campbell County
Total Length, miles	2,303	1,116	167.5
Total Number of Segments	1,972	798	68
Minimum Segment Length, mile	0.001	0.001	0.02
Maximum Segment Length, mile	25.82	25.41	14.11

**Appendix 2.3: Summary of County Paved Roads in Carbon County.**

	Statewide	Eastern Part	Carbon County
Total Length, miles	2,303	1,116	51.12
Total Number of Segments	1,972	798	17
Minimum Segment Length, mile	0.001	0.001	0.001
Maximum Segment Length, mile	25.82	25.41	25.41

**Appendix 2.4: Summary of County Paved Roads in Converse County.**

	Statewide	Eastern Part	Converse County
Total Length, miles	2,303	1,116	83.7
Total Number of Segments	1,972	798	49
Minimum Segment Length, mile	0.001	0.001	0.09
Maximum Segment Length, mile	25.82	25.41	20.07

**Appendix 2.5: Summary of County Paved Roads in Crook County.**

	Statewide	Eastern Part	Crook County
Total Length, miles	2,303	1,116	28
Total Number of Segments	1,972	798	21
Minimum Segment Length, mile	0.001	0.001	0.08
Maximum Segment Length, mile	25.82	25.41	4.86

**Appendix 2.6: Summary of County Paved Roads in Goshen County.**

	Statewide	Eastern Part	Goshen County
Total Length, miles	2,303	1,116	112.4
Total Number of Segments	1,972	798	115
Minimum Segment Length, mile	0.001	0.001	0.01
Maximum Segment Length, mile	25.82	25.41	5.70

**Appendix 2.7: Summary of County Paved Roads in Johnson County.**

	Statewide	Eastern Part	Johnson County
Total Length, miles	2,303	1,116	75.25
Total Number of Segments	1,972	798	45
Minimum Segment Length, mile	0.001	0.001	0.08
Maximum Segment Length, mile	25.82	25.41	8.13

**Appendix 2.8: Summary of County Paved Roads in Laramie County.**

	Statewide	Eastern Part	Laramie County
Total Length, miles	2,303	1,116	235.9
Total Number of Segments	1,972	798	171
Minimum Segment Length, mile	0.001	0.001	0.02
Maximum Segment Length, mile	25.82	25.41	13.34

**Appendix 2.9: Summary of County Paved Roads in Natrona County.**

	Statewide	Eastern Part	Natrona County
Total Length, miles	2,303	1,116	136.22
Total Number of Segments	1,972	798	115
Minimum Segment Length, mile	0.001	0.001	0.02
Maximum Segment Length, mile	25.82	25.41	7.44

**Appendix 2.10: Summary of County Paved Roads in Niobrara County.**

	Statewide	Eastern Part	Niobrara County
Total Length, miles	2,303	1,116	2.997
Total Number of Segments	1,972	798	4
Minimum Segment Length, mile	0.001	0.001	0.03
Maximum Segment Length, mile	25.82	25.41	1.94

**Appendix 2.11: Summary of County Paved Roads in Platte County.**

	Statewide	Eastern Part	Platte County
Total Length, miles	2,303	1,116	158
Total Number of Segments	1,972	798	102
Minimum Segment Length, mile	0.001	0.001	0.01
Maximum Segment Length, mile	25.82	25.41	11.33

**Appendix 2.12: Summary of County Paved Roads in Sheridan County.**

	Statewide	Eastern Part	Sheridan County
Total Length, miles	2,303	1,116	21.55
Total Number of Segments	1,972	798	43
Minimum Segment Length, mile	0.001	0.001	0.07
Maximum Segment Length, mile	25.82	25.41	1.94

**Appendix 2.13: Summary of County Paved Roads in Weston County.**

	Statewide	Eastern Part	Weston County
Total Length, miles	2,303	1,116	4.65
Total Number of Segments	1,972	798	8
Minimum Segment Length, mile	0.001	0.001	0.1
Maximum Segment Length, mile	25.82	25.41	1.65
